UNITED STATES PATENT OFFICE.

ANDREW BUCKLEY, OF PARSONS, KANSAS.

COMBINATION-TOOL.

SPECIFICATION forming part of Letters Patent No. 766,808, dated August 9, 1904.

Application filed August 11, 1903. Serial No. 169,093. (No model.)

To all whom it may concern:

Be it known that I, ANDREW BUCKLEY, a citizen of the United States, residing at Parsons, in the county of Labette and State of Kansas, have invented new and useful Improvements in Combination-Tools, of which the following is a specification.

My invention relates to combination-tools.

The object of the present invention is the provision of a tool adapted for use as a hatchet, a drawing-knife, and a nail-puller; and with this object in view the invention embodies a hatchet provided on its under or inner edge with a knife or cutting edge, and provided in its body with an opening of improved form adapted to act as a nail-puller, as fully set forth hereinafter. The novel features of the invention are embodied in the appended claim.

In the accompanying drawings, Figure 1 is a side view of the invention, and Fig. 2 a section on line X X of Fig. 1.

The numeral 1 designates the hatchet head or body, having the usual eye receiving a suitable handle 2. The body has the usual hammer-head 3 and cutting edge 4.

The inner or under edge of the body 1 I provide with a cutting edge or knife 5, and in the body 1, at any suitable point facing either lengthwise or transversely of the body, I provide the opening 6, which is preferably rounded at one end, of suitable size to accommodate the head of a nail, and has its walls con-

verging to form a continually-narrowing portion to engage the shank of the nail under the head thereof.

The present invention combines in one tool a hatchet, nail-puller, and drawing-knife, and it is especially useful in fitting shingles and lathing, shaving handles, or mitering the edges of boards, extracting nails, and other work.

I wish it understood that I do not confine myself to the exact forms and details herein set forth, but consider that I am entitled to all changes and modifications falling within the spirit and scope of my invention.

Having thus described my invention, what I claim as new, and desire to secure by Letters Patent, is—

A combination-tool comprising a handle, a blade or body secured to said handle having a nail-extracting opening therein, a hammer-head at one side of said body, a cutting edge opposite said hammer-head, and a straight-edge drawing-knife at right angles to said cutting edge on the inner or under side, said drawing-knife forming a continuation of the cutting edge.

In testimony whereof I have signed my name to this specification in the presence of two subscribing witnesses.

ANDREW BUCKLEY.
