ATTORNEY

UNITED STATES PATENT OFFICE.

JOSEPH B. SHORT, OF NEWARK, NEW JERSEY, ASSIGNOR TO THE WHITE-HEAD & HOAG COMPANY, OF NEWARK, NEW JERSEY, A CORPORATION OF NEW JERSEY.

PIN.

SPECIFICATION forming part of Letters Patent No. 790,083, dated May 16, 1905.

Application filed September 6, 1904. Serial No. 223,455.

To all whom it may concern:

Be it known that I, JOSEPH B. SHORT, of Newark, in the county of Essex, in the State of New Jersey, have invented new and useful
 5 Improvements in Pins, of which the following, taken in connection with the accompanying drawings, is a full, clear, and exact description.

This invention relates to improvements in
 10 pins which are adapted more particularly to support a badge, ticket, or price-list, and when used as a badge may be attached or inserted in the lapel of the coat or other apparel, and when used as a ticket or price-card holder
 15 may be inserted in any fabric or soft material.

The object of this invention is to produce a pin so constructed that a badge, sample-ticket, or card may be readily secured thereto, cheap and durable in construction, and of great
 20 utility; and to that end my invention consists in the several new and novel features of construction hereinafter described, and specifically set forth in the claims hereunto annexed.

It is constructed as follows, reference being had to the accompanying drawings, in which—

Figure 1 shows a view of a sample-card secured within the eye of the pin. Fig. 2 shows a side view thereof, the card in cross-section.

30 The pin is constructed with the usual shank *a*, terminating at a point at its lower end and its upper end bent to form an eye *b* and terminating in a head *c*, the outer face of the head *c* lying at a slightly-oblique angle, as
 35 shown in Fig. 2, for the purposes hereinafter set forth.

d is a badge, ticket, or price-card which is adapted to be held and carried by the pin and

which is pierced by the sharp point of the shank *a* near the periphery thereof and then
 40 drawn along said shank so that it passes between the head *c* and the shank and then is thrown over to the position shown in Fig. 2 of the drawings. It will thus be observed that the fact of the head lying at an oblique
 45 angle to the shank permits of the card being drawn up into the angle and forces the head sufficiently out to permit of the ticket passing around into the eye, while, on the other
 50 hand, the fact that the upper edge of the head lies closer to the shank prevents the ticket from working its way into a position which will enable it to be readily drawn down through the narrow space between the head
 55 and the shank.

Having thus described my invention, what I claim, and desire to secure by Letters Patent, is—

1. A badge comprising a pin having the upper portion thereof bent to form an eye
 60 and terminating in a head, and a card perforated adjacent its periphery by the shank and drawn into the eye and suspended thereon in front of said head for the purposes specified.

2. A badge, comprising a headed and pointed pin having a circular eye formed at its
 65 headed end, and a card pierced near its periphery for the passage of the pin and suspended on the lower part of the eye in front of said head.
 70

In witness whereof I have hereunto set my hand this 29th day of August, 1904.

JOSEPH B. SHORT.
