UNITED STATES PATENT OFFICE.

JEAN C. TANTY, OF NEW YORK, N. Y.

TENNIS-NET.

No. 795,317.

Specification of Letters Patent.

Patented July 25, 1905.

Application filed September 29, 1904. Serial No. 226,496.

To all whom it may concern:

Be it known that I, JEAN C. TANTY, a citizen of the Republic of France, residing in the city, county, and State of New York, have invented an Improvement in Tennis-Nets, of which the following is a specification.

The invention relates to tennis-nets which may be suspended indoors as well as outdoors. Heretofore it has been found impossible to use such nets in an ordinary living-room. The construction overcomes that difficulty, as will appear from the accompanying drawing and the following description.

The figure represents the net suspended ready for the game to be played.

A represents a cord or tape forming part of the net attached at B to a hook or screw inserted in the molding or other available support in the room.

C represents weights attached, by means of a cord or otherwise, to the foot of the net in order to stretch it at the desired points.

After thus describing my invention, what I desire to claim and secure by Letters Patent is—

The combination of a tennis-net, ropes attached to the same capable of being fastened to hooks on a molding, and weights suspended from said tennis-net substantially as described.

In testimony whereof I hereunto set my hand, this 26th day of September, 1904, in the presence of two witnesses.

JEAN C. TANTY.
