UNITED STATES PATENT OFFICE.

HEINRICH A. SCHMITZ, OF BONN, GERMANY.

ADJUSTABLE HOLDER FOR CURTAIN POLES AND TOPS.

No. 804,559.

Specification of Letters Patent.

Patented Nov. 14, 1905.

Application filed November 29, 1904. Serial No. 234,821.

To all whom it may concern:

Be it known that I, HEINRICH ANTON SCHMITZ, a subject of the German Emperor, and a resident of Bonn, Germany, have in-
5 vented certain new and useful Improvements in Adjustable Holders for Curtain Poles and Tops, of which the following is a specification.

The subject of this invention is a holder for curtain poles and tops which can be adjusted
10 in the most simple manner and in two directions—namely, perpendicularly and parallelly to the plane of the wall—by fixing the movable parts by means of a single screw.

The accompanying drawings show a form
15 of construction of the holder.

Figure 1 is a side view of the holder; Fig. 2, a top view; Fig. 3, a section on the line A B of Fig. 2 of the joint-fastening.

Similar letters refer to similar parts through-
20 out the several views.

The bolt *a*, provided with barbed hooks at one end, is let into the wall and fixed there. Upon the same slides the fastening-piece *b*, which, moreover, carries an opening for the
25 pole *c*, which pole is bent into an angle and provided with eyes or pins for holding the curtain poles or tops. The two openings in the fastening-piece *b* for the poles *a* and *c* com-

municate with each other, Fig. 3, so that only the turning of a single screw or similar de- 30 vice *d* is required in order to secure the pole *c* on the bolt *a* in any position the length of the parts *a* and *c* admits of.

What I claim as my invention, and desire to secure by United States Letters Patent, is— 35

In a holder for curtain poles and rods, in combination, a bolt or support *a* let into the wall, a pole *c* provided with fastening eyes and pins, a junction or fastening piece *b* sliding on *a*, a screw *d* working therein, said junction 40 moreover being provided with an opening or hole through which passes the bolt *a* and another opening communicating with the same under a right angle, through which passes the pole *c* provided with fastening eyes and pins, 45 so that the same can be secured on the bolt *a* in any desired position by means of the screw *d* or other suitable device, substantially as and for the purpose set forth.

In testimony whereof I have signed my name 50 to this specification in the presence of two subscribing witnesses.

H. A. SCHMITZ.
