UNITED STATES PATENT OFFICE.

HEINRICH FREISE, OF HAMME, NEAR BOCHUM, GERMANY.

REFUSE-BUCKET.

No. 804,715.

Specification of Letters Patent.

Patented Nov. 14, 1905.

Application filed February 3, 1904. Serial No. 191,829.

To all whom it may concern:

Be it known that I, HEINRICH FREISE, a subject of the German Emperor, and a resident of Hamme, Germany, have invented certain
5 new and useful Improvements in or Relating to Buckets, of which the following is a specification.

The present invention relates to improvements in buckets; and its object is to insure
10 the temporary closing of the bucket-cover. These improvements are shown in the annexed drawings, in which—

Figure 1 is a side elevation of a bucket fitted with my improvements. Fig. 2 is a top plan
15 view of same.

Referring to the drawings in detail, *a* represents an ordinary sheet-metal bucket rectangular in cross-section, which is provided with a cover *b*, having the hinge *d*. Secured
20 to the upper face of the cover and at its opposite side edges are metal straps, the free ends *e* of which project beyond the front of the bucket and form hooks, as shown. The

bail *f* for carrying the bucket is pivotally secured in suitable ears on the sides of the
25 bucket and is bent so as to rest in the aforesaid hooks after the cover is closed. The weight of the bail thus falls upon the cover and assures a close connection between the
30 latter and the bucket.

Having now fully described my invention, what I claim, and desire to secure by Letters Patent, is—

A bucket having a cover hinged thereon, hooks secured to the upper side of the cover
35 near each side edge thereof and projecting beyond the front of the bucket, and a pivoted wire bail bent inwardly near its pivotal points to provide portions engaging said hooks.

In testimony whereof I have hereunto set
40 my hand in presence of two witnesses.

HEINRICH FREISE.

Witnesses:

PETER LIEBER,
WILLIAM ESSENWEIN.
