UNITED STATES PATENT OFFICE.

ALBA C. BOOTH, OF BURLINGTON, VERMONT.

BOTTLE-CAP LIFTER.

No. 812,257.

Specification of Letters Patent.

Patented Feb. 13, 1906.

Application filed February 1, 1905. Serial No. 243,671.

To all whom it may concern:

Be it known that I, ALBA C. BOOTH, a citizen of the United States, residing at No. 4 Bradley Place, in the city of Burlington, in the county of Chittenden and State of Vermont, have invented a new and useful Improvement in Bottle-Cap Lifters, of which the following is a specification.

It is well known that many bottles containing beer and other kinds of fluid are covered with a cap which has to be removed before using the contents; and the object of this invention is to provide a device for removing this cap.

In the accompanying drawings, Figure 1 is a view looking down upon the top of a bottle. Fig. 2 is an enlarged fragmentary view showing how the upper end of the lifter C fits into the notch X in order to lift off the cap from the bottle. Fig. 3 shows in elevation how the lifter fits into the groove *d*. Fig. 4 is a side view showing the lifter as it is being taken from the groove in the side of the bottle in the act of removing the cap. Fig. 5 gives a plan view and a side view of the lifter C.

In Fig. 1, *a* represents the edge of the glass at the top of the bottle with the upper end of the groove or slot *d* on one side of the said bottle. At the upper end of this groove is a notch X. Now the upper end of the cap-lifter C rests in this notch, and by pulling up the other end of the said lifter the cap B is lifted off from the bottle and then the lifter fits back into the groove *d*. The lifter is made of iron or any other metal.

What I claim as my invention, and desire to secure by Letters Patent, is—

A bottle provided with a groove or slot on one side into which a lifter may be inserted for removing the cap from the bottle, the said groove terminating in a notch at its upper end as herein described.

In testimony whereof I have signed my name to this specification in the presence of two subscribing witnesses.

ALBA C. BOOTH.
