UNITED STATES PATENT OFFICE.

CLAY WILSON, OF NEW YORK, N. Y.

CUP-SETTING.

No. 860,508.

Specification of Letters Patent.

Patented July 16, 1907.

Application filed November 20, 1906. Serial No. 344,261.

To all whom it may concern:

Be it known that I, CLAY WILSON, a citizen of the United States, residing at New York, in the county of New York and State of New York, have invented a new and useful Cup-Setting; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it appertains to make and use the same.

The invention relates to cups for the setting of rhinestones and other gems of like nature which are worn on garments and so forth.

The object of the invention is to provide a cup of this character which will neatly and firmly hold a stone and which is also provided with means for attaching said cup to the garment.

With these and other objects in view, the invention consists in the novel construction and arrangement of parts, hereinafter described and shown, and particularly pointed out in the claims.

In the drawings, Figure 1 is a side elevation of a cup constructed in accordance with this invention. Fig. 2 is a horizontal sectional view. Fig. 3 is a sectional view on line 3—3 of Fig. 1, illustrating the device partly in top plan view, and showing the lugs 3 with V-shaped teeth.

Referring to the drawings, 1 designates a cup formed of metal or other suitable material and which is approximately cone-shaped and is provided with tongues 2. The tongues 2 are adapted to be bent inwardly and thus clamp the gem after it is placed in the cup. At the small end of the cup 2, are two lugs 3, which are struck out of the cup and extend in opposite directions. The lugs 3 are for the purpose of securing the cup to the garment on which it is worn, and it will be seen that this construction greatly simplifies the work of attaching these cups to the garment.

What I claim is:

A device of the class described, comprising, a conical shaped cup, adapted to receive a stone or jewel, said cup having lugs for securing the stone or jewel in place, said cup having at its base, integral V-shaped lugs extending in opposite directions, said lugs having their outer edges provided with V-shaped teeth or serrations which are adapted to be engaged by fastening means for fastening the cup to a garment, substantially as specified.

In testimony whereof I have signed my name to this specification in the presence of two subscribing witnesses.

CLAY WILSON.
