UNITED STATES PATENT OFFICE.

JESSE WINEBURGH AND ABRAHAM WINEBURGH, OF NEW YORK, N. Y., AND FRANK BYRNE IVY, OF ESSEX FELLS, NEW JERSEY.

REEL AND DISPLAY DEVICE FOR VEILINGS, LACES, AND LIKE FABRICS.

No. 865,466.

Specification of Letters Patent.

Patented Sept. 10, 1907.

Application filed April 6, 1906. Serial No. 310,254.

To all whom it may concern:

Be it known that we, JESSE WINEBURGH and ABRAHAM WINEBURGH, both citizens of the United States, and residents of the city of New York, borough of Manhattan, in the county and State of New York, and FRANK BYRNE IVY, a citizen of the United States, and a resident of Essex Fells, in the county of Essex and State of New Jersey, have invented a new and Improved Reel and Display Device for Veilings, Laces, and Like Fabrics, of which the following is a full, clear, and exact description.

The object of the improvement is to provide a new and improved reel and display device for veilings, laces and like fabrics or materials, and arranged to hold the fabric properly reeled and a portion thereof displayed over a representation, such as the face of a woman, to effectually indicate the merits of the fabric when in actual use.

The invention consists of novel features and parts and combinations of the same, which will be more fully described hereinafter and then pointed out in the claims.

A practical embodiment of the invention is represented in the accompanying drawings forming a part of this specification, in which similar characters of reference indicate corresponding parts in both the views.

Figure 1 is a face view of the improvement, and Fig. 2 is a transverse section of the same on the line 2—2 of Fig. 1.

On a reel A of cardboard or other suitable material is reeled in the usual manner the veiling, lace or other fabric B, and on one end of the reel A is secured by hinges C a display card D provided on its upper face with a suitable representation, such as the head of a woman, for instance, as plainly indicated in Fig. 1. The display card D is swung onto the fabric B so that the end portion B' of the fabric extends over the said representation to display the fabric over the representation to indicate its merits when in actual use. It

is understood that the fabric displayed is of an open mesh to permit of readily seeing the representation through the meshes of the fabric, and hence the veiling, for instance, appears over the representation of a woman's head the same as when the veiling is in actual use. By reference to Fig. 1, it will be seen that the length of the display card D is about half the length of the reel A, so that the fabric is displayed on the reel in the piece and as it appears when in actual use. When it is desired to unreel the fabric it is only necessary to open the outer end portion B' and then swing the display card D outward out of engagement with the fabric B, to allow convenient unreeling of the fabric from the reel A.

The display card D also serves as a tag for indicating the name of the manufacturer, trade-mark matter, prices, number and like matter usually found on tags applied to fabric of this nature.

The reel and display card shown and described is very simple and durable in construction, and can be cheaply manufactured, and the display card D can be readily applied to reels as now in use.

Having thus described our invention, we claim as new and desire to secure by Letters Patent:

A reel and display device for veilings, laces and like fabrics or materials, comprising a reel on which the fabric is reeled and a display card hinged to one end of the reel, and having on its face the representation of the head of a female, the display card being adapted to underlie the outer end portion of the fabric to display the same over the said head representation, the length of the display card being less than that of the reel to display a portion of the fabric in the piece.

In testimony whereof we have signed our names to this specification in the presence of two subscribing witnesses.

JESSE WINEBURGH.
ABRAHAM WINEBURGH.
FRANK BYRNE IVY.
