UNITED STATES PATENT OFFICE.

ROBERT CORNELY, OF PARIS, FRANCE.

ORNAMENTAL SEAM.

No. 881,903.

Specification of Letters Patent.

Patented March 17, 1908.

Application filed May 11, 1906. Serial No. 316,402.

To all whom it may concern:

Be it known that I, ROBERT CORNELY, resident of Paris, France, have invented a new and useful Ornamental Seam, which is fully set forth in the following specification.

My invention relates to seams, and particularly to ornamental seams.

In U. S. Patent No. 292,284, dated January 22, 1884, a machine is described and claimed for winding a thread around several rows of chain-stitches which are produced out of a single thread, thus producing cross portions on one face of the material; and the object of this invention is to produce a highly ornamental embroidery and edging seam by introducing a stuffing material into the seam in question.

The invention will be better understood by reference to the accompanying drawings, wherein—

Figure 1 is a view of the seam on the front face of the goods, the stuffing material being omitted; Fig. 2 is a like view of the seam with the stuffing material associated therewith; and Fig. 3 is a view of the seam on the rear side of the material.

Referring to the drawings, *a* are loops produced by two hook needles out of a single thread on one face of the goods, and *b* indicates the crossing portions of the thread *a* on the other side of the goods.

c is a thread which is wound around the two rows of stitches *a*, and *d* is any suitable or desired stuffing material around which the

thread *c* is wound at the same time that it is passed around the two rows of stitches *a*. Depending upon the breadth or number of threads *c*, the space therebetween may be larger or smaller so that the stuffing material may be covered to any desired extent.

It will be observed that by the present invention a better effect is given to the seam, by thus filling up and raising the same, and that a highly desirable ornamental embroidery and edging seam is thus secured.

Claim.

An ornamental seam composed of parallel rows of stitches arranged some distance apart and having their loops *a* disposed on one face of the fabric, crossing portions *b* joining said stitches and disposed on the other face of the fabric, said stitches and crossing portions being formed of one single continuous thread, another thread or threads *c* wound around the parallel rows of loops *a* and at the same time around a stuffing medium *d*, which stuffing medium *d* is thus confined by thread or threads *c* which are wound around the loops *a*, said stuffing medium *d* filling up the seam and concealing said parallel rows of stitches.

In testimony whereof I have signed this specification in the presence of two subscribing witnesses.

ROBERT CORNELY.
