UNITED STATES PATENT OFFICE.

HUGO R. HENDRICKSON, OF SOUDAN, MINNESOTA.

PLIERS.

No. 907,147.

Specification of Letters Patent.

Patented Dec. 22, 1908.

Application filed June 4, 1908. Serial No. 436,712.

To all whom it may concern:

Be it known that I, HUGO R. HENDRICKSON, a citizen of the United States, residing at Soudan, in the county of St. Louis and State of Minnesota, have invented a new and useful Pliers, of which the following is a specification.

My invention relates to combination tools, and the object is to provide a handy, useful tool comprising in compact form in a single device pincers, nippers, wire cutter, nail puller, hammer, nut cracker, pipe wrench, nut wrenches and a screw driver.

In the accompanying drawing Figure 1 is a side view of my combination tool, and a nail extracted by it. Fig. 2 is an edge view of Fig. 1 with two nails between the jaws of the pincers. Fig. 3 is a front end view of the device with a piece of wire between the wire cutting jaws.

Referring to the drawing by reference numerals, 1 and 2 are a pair of pincer jaws pivoted at 3 and formed with levers 4 and 5 which are provided with adjacent serrated faces 6 serving as a nut cracker. The jaw 2 is formed with a hammer face 7, so that the device may be used as a hammer. Said jaw also has a V-shaped claw 8 in which to hold nails as indicated at 9 for extracting them. If the nail has no head it may be grasped as

9^x between the regular edges of the jaws. The claw 8 also serves as a clearing for wire placed as 10 in Fig. 3 to be cut by the special wire-cutting jaws 11 provided closer to the pivot 3. The lever 4 has its rear end formed into a socket wrench 12, an open wrench 13 and a screw driver 14. The other lever, 5, has its rear end formed with a wrench of the so-called alligator type, having a V-shaped gap 15 with teeth 16 in one side thereof for taking hold of a pipe placed as 17 therein. It may also take hold of bolt heads and nuts for turning them.

Having thus described my invention and indicated its use, what I claim is:

A tool comprising a pair of levers crossed and pivoted at the crossing, the front ends of the levers being formed into pincer jaws, one of which has a nail pulling claw in it, and rearwardly of such claw and parallel to the jaw having the claw a wire-cutting jaw, and means on the other jaw for coacting with said wire-cutting jaw.

In testimony whereof I affix my signature, in presence of two witnesses.

HUGO R. HENDRICKSON.
