UNITED STATES PATENT OFFICE.

BERT HILL, OF KIOWA, KANSAS.

CLOTHES-PIN RECEPTACLE.

No. 929,430.

Specification of Letters Patent.

Patented July 27, 1909.

Application filed September 1, 1908. Serial No. 451,271.

To all whom it may concern:

Be it known that I, BERT HILL, a citizen of the United States of America, residing at Kiowa, in the county of Barber and State of Kansas, have invented new and useful Improvements in Clothes-Pin Receptacles, of which the following is a specification.

This invention relates to clothes pin receptacles designed to be suspended from a clothes line and mounted on rollers to be carried from place to place upon the line, and one of the principal objects of the same is to provide a basket or receptacle made of wire cloth or canvas which will contain a number of clothes pins and to suspend said basket or receptacle from the clothes line by means of rods or bars having grooved rollers pivoted thereon for movement from place to place upon the clothes line.

Another object of the invention is to provide a basket or receptacle having a curved and open top which will permit ready access to the clothes pins and suspending devices at the ends of said receptacles for carrying grooved pulleys adapted to run upon the clothes line to permit the receptacle to be moved along as the clothes are hung upon the line.

These and other objects may be attained by means of the construction illustrated in the accompanying drawing, in which the figure is a perspective view of the clothes pin receptacle made in accordance with my invention and suspended from a clothes line.

Referring to the drawing, the numeral 1 designates a basket or receptacle for clothes pins, said basket or receptacle having preferably a curved bottom 2 and curved side edges 3 to permit ready access to the clothes pins. The basket or receptacle may be made of wire cloth, preferably galvanized iron wire, or of canvas or other suitable material hav-

ing wire binding members 4 at the sides thereof, said members being preferably curved as shown in the drawing to permit the clothes pins to be readily withdrawn therefrom. The ends of the members 4 are connected by means of loops 5 with the end braces 6, said end braces having similar loops 7 engaging the loops 5. The end members 6 are centrally flattened, as at 8, and riveted to the flattened portions 8 are the suspending rods 9, said rods having their upper ends bent at 10 and turned downward to form bearings for the grooved rollers 11, said rollers being journaled in the flattened portion 12 of the rods 9. By means of this construction the basket or receptacle may be readily connected to a clothes line 13 and removed therefrom, said basket being movable upon the clothes line from place to place.

My invention is simple in construction, can be produced at slight cost, is durable and useful for its purpose and should be readily salable.

I claim:

The herein described clothes pin receptacle comprising a wire gauze basket having a curved bottom, wire binding members at the upper edges of the sides of the receptacle, said binding members being downwardly curved, end bars connected to said binding members, suspending rods rigidly connected to said end bars, said suspending rods being bent to form parallel portions, and rollers journaled in said parallel portions for suspending the receptacle at its opposite ends upon a clothes line.

In testimony whereof I affix my signature in presence of two witnesses.

BERT HILL.
