UNITED STATES PATENT OFFICE.

ROSE D. WOLF, OF PERU, INDIANA.

CLOTHES-SUPPORT FOR IRONING-BOARDS.

No. 930,712.

Specification of Letters Patent.

Patented Aug. 10, 1909.

Application filed August 17, 1908. Serial No. 448,913.

To all whom it may concern:

Be it known that I, ROSE D. WOLF, a citizen of the United States, residing at Peru, in the county of Miami and State of Indiana, have invented certain new and useful Improvements in Clothes-Supports for Ironing-Boards, of which the following is a specification, reference being had to the accompanying drawings.

10 This invention relates to improvements in devices for attachment to ironing boards for supporting the clothes being ironed and preventing them from dropping to the floor and becoming soiled.

15 The object of the invention is to provide a simple and practical clothes supporting device of this character which may be readily applied to, adjusted upon and removed from an ironing board.

20 With the above and other objects in view, the invention consists of the novel features of construction and the combination and arrangement of parts hereinafter fully described and claimed, and illustrated in the accompanying drawings, in which—

25 Figure 1 is a side elevation of an ironing board having the improved clothes support applied thereto; Fig. 2 is a detail vertical transverse section taken on the plane indicated by the line 2—2 in Fig. 1; and Fig. 3 is a detail perspective of the improved clothes support or basket.

30 In the drawing 1 denotes an ironing board of any suitable form and construction but which, as illustrated, is of the folding type; and 2 denotes the improved clothes support or basket. The latter is adapted to be adjustably suspended beneath the outer portion of the board and while it may be made of any suitable material, it is preferably constructed of woven willow or splints. It is of suitable size and shape to fit the ironing board upon which it is to be used and as illustrated it is of rectangular shape and
45 curved transversely. At its inner end is formed an opening 3 which is for the reception of the supporting frame of the board 1 and which provides two spaced arms 4 to lie beneath the opposite sides of the central or

inner portion of the board 1. Rising from 50 the arms or extensions 4 are supporting rods 5 also preferably constructed of willow. Each of these rods is provided at its upper end with an attaching hook 6 adapted to be readily engaged with and disengaged from 55 one of a plurality of screw eyes 7 arranged in longitudinal rows upon the bottom of the board 1 adjacent to its side edges. A plurality of the eyes 7 is provided so that the support or basket may be adjusted longitudinally with respect to the ironing board. 60

From the foregoing it will be seen that the invention provides an exceedingly simple and effective support to catch the clothes that hang from the ironing board while being 65 ironed and prevent them from contacting with the floor or any nearby object which might soil them.

The peculiar construction of the device renders it light in weight and inexpensive 70 and its peculiar manner of attachment permits it to be quickly and easily applied, adjusted and removed.

Having thus described the invention what is claimed is:

75 The combination with an ironing-board and a supporting structure for the same, of a clothes basket of U-shape in cross section arranged beneath one end of the ironing-board and having its outer end extending 80 beyond said end of the ironing-board, the other end of the basket being formed with longitudinally extending arms to receive the ironing-board supporting structure between them, a pair of suspending rods 85 extending upwardly from the bottom edge of each of said arms of the basket and contacting detachable fastenings on the upper ends of said rods and the ironing-board, whereby the basket is detachably and ad- 90 justably suspended from the ironing-board.

In testimony whereof I hereunto affix my signature in the presence of two witnesses.

ROSE D. WOLF.
