T. S. O. BLENIS. FUMIGATING ROOST. APPLICATION FILED JAN. 29, 1909.

985,503.

Patented Feb. 28, 1911.

UNITED STATES PATENT OFFICE.

THOMAS S. O. BLENIS, OF ROCHESTER, INDIANA.

FUMIGATING-ROOST.

985,503.

Specification of Letters Patent.

Patented Feb. 28, 1911.

Application filed January 29, 1909. Serial No. 474,992.

To all whom it may concern:

a citizen of the United States, residing at Rochester, in the county of Fulton and State 5 of Indiana, have invented a new and useful Fumigating-Roost; and I do hereby declare the following to be a full, clear, and exact description of the invention, such as will enable others skilled in the art to which it 10 appertains to make and use the same.

The invention relates to a device designed for a roost or perch for chickens, turkeys and other kinds of domestic fowls and has for its object to provide an improved de-15 vice of this character containing means for eradicating lice and other injurious vermin to which domestic fowls are subject.

Another object of the invention is to provide a device of this character having a 20 drainage system connected thereto.

With these and other objects in view, the invention consists in the novel construction and arrangement of parts hereinafter described and shown and particularly pointed 25 out in the appended claim.

In the drawings forming part of this specification and in which like numerals of reference indicate like parts throughout the several views, Figure 1 is a perspective view 30 of a chicken roost constructed in accordance with this invention. Fig. 2 is a plan view of the drainage system, showing the same detached. Fig. 3 is a vertical sectional view through one of the supporting legs. Fig. 4 35 is a horizontal sectional view taken through the device. Fig. 5 is a longitudinal sectional view through one of the transverse members 5 and the plate 5^a.

Referring to the drawings, 1 designates 40 the four arcuate corner pieces which are connected together by end members 2 and side members 3 and 4. The members 3 and 4 are hollow, as shown in Fig. 4, and have | communicating pipes or tubes 5. One of two subscribing witnesses.

45 the corner pieces, has connected thereto the vertical pipe 6, which is fed by a tank 7. The pipe 6 is provided with a cut-off 8, by which the flow of the oil or contents of the tank is regulated.

Be it known that I, Thomas S. O. Blenis, oil, the same is communicated to the cross piece 3 which supplies the pipes 5 and the other frame member 4, as will be readily understood. The transverse members 5 are provided with a plurality of wicks 9 which 55 transmit the oil fumes from this device to the fowls which cause the death of the lice or other vermin with which the fowls may be infected. Immediately below the frame of this device is a drainage system consist- 60 ing of drainage plates 5a, one of which is arranged under each of the pipes 5 and are connected with and emptied into a larger pipe 3ª which is arranged beneath the pipe 3, as will be readily understood. By this 65 means, the oil or other contents of the device can be collected as it escapes into the drainage pipe 3ª.

> The two end members of the frame designated by the numeral 2 are provided with 70 metallic straps or members 2b. These metallic straps or members have their free ends, as shown in Fig. 3, shaped into the form of sockets 2a, which are designed to receive suitable legs or supports 2°, as will be clearly 75 understood.

Having thus described the invention, what I claim is—

In combination with an oil distributing device for hen roosts, comprising parallel 80 distributing members and connecting conduit means, a drip catching device consisting of a plurality of parallel fluid receiving concave members disposed beneath the distributing members, a concave pan disposed 85 at right angles to said concave members and formed integrally therewith, said concave members being inclined downwardly so as to cause the collected fluid to flow into the concave pan.

In testimony whereof I have signed my name to this specification in the presence of

THOMAS S. O. BLENIS.

Witnesses:

George W. Marshall, WILLIAM E. MOHLEN.
