J. E. DAVITT

EYE SHIELDING ATTACHMENT FOR WINDSHIELDS

Filed Oct. 2, 1922

UNITED STATES PATENT OFFICE.

JAMES E. DAVITT, OF GROTON, NEW YORK.

EYE-SHIELDING ATTACHMENT FOR WINDSHIELDS.

Application filed October 2, 1922. Serial No. 591,924.

To all whom it may concern:

citizen of the United States, residing at being principally for illustrative purposes. Groton, in the county of Tompkins and The free ends of the spring arm 3 in the 5 State of New York, have invented certain construction herein disclosed are bent innew and useful Improvements in Eye-10 tion, such as will enable others skilled in eled as clearly shown in Fig. 4. use the same.

15 liable attachment for windshields compris- the form of a metal plate provided with a 20 from approaching headlights, novel provi- See also Fig. 4. Whenever the use of the ness for use.

being supplemented by the accompanying drawing.

Figure 1 is a perspective view of the attachment in its normally elevated position.

Figure 2 is a longitudinal sectional view with parts in the positions shown in Fig. 1. Figure 3 is a horizontal sectional view.

Figure 4 is a detail vertical transverse section as indicated by line 4-4 of Fig. 1.

In the drawings above briefly described, the numeral 1 designates a support here shown in the form of an arched spring clip 40 adapted to engage the upper edge of the windshield. The numeral 2 designates an 50 by punching said strip and the rear leg of stops, and an eye shield carried by said the clip, as indicated by the numeral 4. swinging arm. Furthermore, attenton may be directed to 2. An eye shading attachment for windthe fact that the arms or arm 3 may be con-shields comprising an arched spring clip to

nected with the clip 1 or other support in Be it known that I, James E. Davitt, a any desired manner, the construction shown 55

wardly toward each other to provide a pair Shielding Attachments for Windshields; of vertically elongated stops 5 which contact 60 and I do declare the following to be a full, with each other at their centers and have clear, and exact description of the inven- their upper and lower ends inclined or bev-

the art to which it appertains to make and A vertically swinging arm 6 is pivoted between the arms 3 as indicated at 7, said 65 My invention has for its object to provide arm carrying an elongated frame 8 containa simple and inexpensive, yet a highly re- ing an eye shield 9 which is preferably in ing a suitable eye shielding plate normally multiplicity of finely spaced perforations elevated above the windshield but adapted 10. The arm 6 is normally held in an ele-70 to be moved downwardly into the driver's vated position as seen in Figs. 1 and 2, by line of vision to shield his eyes against glare resting upon the upper ends of the stops 5. sion being made for holding the device in eye shield is desired however, it is simply its normally elevated position and for per- necessary to pull downwardly upon the 75 mitting it to be readily swung down in readi-frame 8 or arm 6, whereupon this arm wedges between the stops 5 against the ac-With the foregoing in view, the invention tion of the spring arms 3 and may be quickly resides in the novel subject matter herein-swung downwardly to position the shield 9 after described and claimed, the description operatively in the driver's line of vision. 30 When the use of the device is no longer needed, it is simply necessary to push it again upwardly, during which movement, the stops 5 are spread from each other by engagement of the arm 6 therewith.

As excellent results may be obtained from the details disclosed, they may be followed if desired. It is to be understood however that within the scope of the invention as claimed, numerous minor changes may be 90 made.

I claim:

1. An eye shading attachment for windshields comprising a support, a pair of horielongated strip of spring metal which is zontally yieldable spring arms extending 95 bent closely around the rear leg of the rearwardly from said support and having arched clip and has its ends extended rear- their free ends turned inwardly into conwardly from said clip in parallel relation tact with each other to form vertically diswith each other to form a pair of spring posed stops, said stops having beveled upper arms 3 which may yield horizontally but not and lower ends, a vertically swinging arm 100 vertically. The strip 2 may be secured to pivoted between said spring arms and northe clip 1 by any desired means, for instance mally resting on the upper ends of said

engage the upper edge of the windshield, a strip of spring metal bent around the rear leg of said arched spring clip and secured thereto, the ends of said strip extending rearwardly from said clip to form horizontally yieldable spring arms, a vertically swinging arm pivoted between said spring

arms and carrying an eye shade, and means on said spring arms for normally holding said swinging arm elevated.

In testimony whereof I have hereunto affixed my signature.

JAMES E. DAVITT.
