## C. S. KING

ARMREST FOR BANJOS

## UNITED STATES PATENT OFFICE.

CLINTON SHIRLY KING, OF EDGEWOOD, RHODE ISLAND.

ARMREST FOR BANJOS.

Application filed April 18, 1922. Serial No. 554,985.

To all whom it may concern:

Be it known that I, Clinton Shirly jo and 6 my improved arm rest. vented a new and useful Improvement in Armrests for Banjos, of which the following is a specification.

My invention has reference to an improve-10 ment in arm rests for banjos and more particularly to an improvement in an arm rest for banjos that can be detachably secured in place on any banjo without the use of

skilled labor.

In the usual construction of arm rests or guards for banjos the arm rest or guard is fixed to and sold with the banjo. If an owner of a banjo desires such a guard on his banjo, it is necessary to send the banjo 20 to the factory to have the arm rest or guard mechanic on musical instruments, as it is necessary to drill holes through the rim of. the banjo, to bolt the arm rest or guard to 25 the rim of the banjo.

The object of my invention is to improve the construction of an arm rest for banjos, whereby the arm rest may be sold as a separate article and easily secured to a banjo

without the use of special tools.

A further object of my invention is to construct such an arm rest for banjos so that the arm rest may be easily attached or detached from the banjo, without injury to

35 the banjo.

My invention consists in the peculiar and novel construction of an arm rest for banjos, said arm rest having details of construction, as will be more fully set forth hereinafter and claimed.

banjo provided with my improved attach-

able and detachable arm rest.

Figure 2 is an enlarged vertical view looking at the back of the arm rest.

Figure 3 is an enlarged plan view looking at the underside of the arm rest, and

Figure 4 is a still further enlarged detail transverse sectional view through the arm rest and part of the banjo, taken on line 4, 4 of Figure 1.

In the drawing 5 indicates part of a ban-

King, a citizen of the United States, resid- The banjo may be of any usual construcing at Edgewood, in the county of Provition, with a rim 7, head 8, usually formed 55 5 dence and State of Rhode Island, have in- from a skin which is stretched over the rim 7, and then onto a wire ring 9. Over the head 8 and ring 9 is the usual top hoop 10 held in place by the usual brackets, not shown.

My improved attachable and detachable arm rest 6 for banjos consists of a curved edge flat plate 11 which extends over the head of the banjo and has a lip 12 curved to conform to the usual banjo rim 7. Se- 65 cured to the lip 12 are two fastening members 13. 13 each fastening member 13 consisting of a bolt 14 having a sliding fit in a bearing 15 on the lip 12. The bolt 14 has a hook shaped end 16 which hooks over the 70 head hoop 10 and a screw-threaded end 17. applied, unless he happens to be a skilled. On the bolt 14 is a nut 18 and a tubular slide 19 having a side projection 20 which goes under the ring 9, as shown in Figure 4.

By this construction the arm rest is de- 75 tachably secured to the ring 9 and hoop 10 and the plate 11 is spaced from and parallel with the banjo head 8, also the boring of holes through the rim, for arm rest fastening members, as shown in United States 80 Patent No. 360,935, granted April 12, 1887,

is eliminated.

When in use the plate 11 forms the rest for the arm and holds the arm out of contact with the head 8 and the arm rest is 85 easily attached or detached from the banjo, by tightening or loosening the nut 18.

I do not wish to confine myself to the construction of my improved arm rest as the same could be varied within the scope of 90

the appended claims.

Figure 1 is a face view of a portion of a Having thus described my invention I claim as new:—

1. An arm rest for banjos consisting of a flat curved edge plate adapted to extend 95 over the head of a banjo and having a curved lip, fastening members on the curved lip, said fastening members having means for detachably securing the arm rest to the head ring and hoop of a banjo, for the purpose 100 as described.

2. An arm rest for banjos consisting of a

flat curved edge plate adapted to extend over the head of a banjo, a curved lip on the plate, fastening members on the lip, each fastening member consisting of a bolt slid-pose as described. ably secured to the lip and having a hook shaped end adapted to go over the head hoop of a banjo and a screw-threaded end, a tubular slide on the bolt and having a side

In testimony whereof, I have signed my name to this specification.

CLINTON SHIRLY KING.
