(57) **ABSTRACT**

Systems and methods are described for receiving a request from a data recipient to access information from a data provider associated with a user, wherein the request comprises a data recipient token. The request is validated and in response to validating the request, a secondary token is transmitted to the data provider. The information is received from the data provider and a package of authorized information is generated based on the information received from the data provider. The package of authorized information is transmitted to the data recipient.
