KEY CHECK AND MATCHBOOK HOLDER

David O. Ford, San Antonio, Tex.

Application February 27, 1950, Serial No. 146,500

1 Claim. (Cl. 206—20)

1

This invention relates to a combined key check or identification tag and match book holder.

An object of this invention is to provide a key check or identification tag adapted for mounting on a key chain which includes means for removably holding a match book so that when the match book is closed it will be locked onto the holder or check.

Another object of this invention is to provide a key check and match book holder which also includes a blade or edge formed on the check for use in scraping a windshield.

A further object of this invention is to provide a combined key check and match book holder which can be produced at small cost and which will permit the placement of a name or advertisement on one face thereof.

With the above and other objects in view, my invention consists in the arrangement, combination and details of construction disclosed in the drawings and specification, and then more particularly pointed out in the appended claim.

In the drawings:

Figure 1 is a detailed front elevation of a key check or tag constructed according to an embodiment of this invention and having a match book mounted thereon.

Figure 2 is a sectional view taken on the line 2—2 of Figure 1.

Figure 3 is a sectional view taken on the line 3—3 of Figure 1.

Figure 4 is a front elevation of the key check with a match book removed.

Figure 5 is a fragmentary horizontal section similar to Figure 3 showing this match book holder on a wall of a cigarette case.

Referring to the drawing:

The numeral 10 designates generally a key check or identification tag which is provided with a tongue 11 at its upper end formed with an opening 13 through which a chain 12 is adapted to loosely engage. The check or tag 10 includes a rectangular body 14 which is formed with a straight bevelled edge 15 adapted to be used as a scraper for scraping ice or the like from the front face of a windshield. The body 14 is provided at its opposite longitudinal edges with a pair of inwardly projecting flanges 16 forming inwardly opening channels 17 within which the back 18 of a match book 19 is adapted to engage.

In the mounting of the match book 19 in the channels 17 the cover 20 is opened and is moved upwardly through the channels 17 until the back 18 of the match book is disposed in confronting position to the forward side of the body 14. The cover 20 may be swung downwardly to the closed position shown in Figure 2 whereupon the cover will lock the match book or package onto the

2

check or tag 10. When a match is to be removed from the match book the cover 20 may be raised without removing the book or package from the check. The check 14 is adapted to have advertising material or other indicia on the rear side thereof so that this key check may be made and produced at a small cost or possibly as an advertising element which is given away by the advertiser. This device is preferably formed out of plastic material which when the device is used as a windshield scraper will not scratch the windshield.

Referring to Figure 5 the numeral 21 designates a wall of a cigarette case of conventional construction which has fixed to the outer side thereof a match book holder 10^a formed of a plate 14^a having a pair of opposed flanges 16^a on the opposite vertical or lengthwise edges thereof. A match book is adapted to engage flanges 16^a in the same manner as shown in Figures 1 to 3.

What is claimed is:

In combination, an advertising tag and scraper formed of a plate of relatively inflexible, non-abrasive material having advertising media on one side thereof, an apertured tongue extending from one end of said plate, a pair of confronting inwardly reverted arcuate flanges carried by the opposite lengthwise edges of said plate on the side opposite said advertising media, for the reception of the back of a match book having a back and a foldable cover, said back engaging beneath said flanges and said cover engaging over said flanges to thereby lock the match book onto said tag, and a beveled edge on the end of said plate opposite said tongue forming a scraper blade.

DAVID O. FORD.
