(57) **ABSTRACT**

Various embodiments are directed to a method for enhancing the outcome of a reel spinning game having one or more shared award-modifier reels. An embodiment of the method includes providing a game including a first set of reels, a second set of reels, and a shared base award-multiplier reel positioned adjacent to a first and second set of reels, wherein the first set of reels, second set of reels, and the shared base award-multiplier reel form a contiguous set of reels having a common axis of rotation, and the shared base award-multiplier reel enhances any winning outcomes in the first and/or second set of reels. Additionally, an embodiment of the method includes determining whether the game outcome of one set of reels is a winning outcome and enhancing the winning outcome of at least one set of reels when an award-multiplier symbol is present on the shared base award-multiplier reel.

FIELD OF TECHNOLOGY

Various embodiments are directed to a reel spinning game having one or more shared award-modifier reels acting to enhance any winning outcomes in a reel spinning game.

BACKGROUND

A standard slot machine includes between three and five rotatable reels for use in game play. On the periphery of each reel are gaming symbols, such as assorted fruit, numbers, and/or bar symbols. The reels are caused to spin until each reel reaches a resting position. The success or failure of the game is then determined by comparing the combination of reel symbols that are displayed when the reels are in their resting positions.

To add interest to the game, many different types of slot machines have been developed over time. For example, in some slot machines the display windows show more than one adjacent symbol on each reel, thereby allowing betting involving multiple rows. Other types of slot machines have also been developed to increase player interest that include "second chance" games. Typically, "second chance" games try to maintain player interest from a first game segment to a second game segment by providing the player with another opportunity to win.

Additionally, a variety of bonus games have been produced in which a slot machine pays out a final award by adding a single value to, or multiplying a basic slot machine pay award. One such game is a 4-reel slot machine. In such a game, the first three reels embody a basic slot machine game with base pays published on a pay table. For example, 3 bars might pay 10 credits. The 4th reel contains bonus actions that are applied to any base pay if a valid base pay and a bonus action appears on the pay line at the same time. Thus, in one example, the base pay might be multiplied by 10, have 100 added to its value, or respin a random number of times, thereby accumulating some random multiple of the base pay.

Others have produced bonus devices such as secondary wheel games or top box games to provide a bonus game that produces a payment or adds to a base pay on the basic slot

machine. These add-on games are more complicated for players to understand and more expensive to produce.

However, there is a continuing need for additional slot machine variants that provide a player with enhanced excitement and diversity of game play, without departing so far from the original slot gaming concept that player comfort is lost. Further, there is a continuing need for a gaming machine that provides increased player excitement due to the visual entertainment that occurs specifically in response to the player's actions. Additionally, there is a continuing need for a gaming machine that provides and maintains a high rate of game play speed so that the number of games played is not substantially reduced by the variation from the original slot gaming concept. Accordingly, those skilled in the art have long recognized the need for a gaming machine that addresses these issues.

SUMMARY

Briefly, and in general terms, the invention resolves the above and other problems by providing a gaming machine having a base game and two or more base award modifiers operating independently or simultaneously (i.e., two or more base award modifiers operating independently or in conjunction with one another to modify a base game award). The gaming machine includes: indicia of a plurality of spinning reels employed in a base game, indicia of at least one spinning reel employed as a first base award modifier, and indicia of at least one spinning reel employed as a second base award modifier.

Additionally, a method for enhancing a winning outcome in a game is disclosed. The method includes: providing a game including a first set of reels, a second set of reels, and a shared base award-multiplier reel positioned adjacent to first and second set of reels, wherein the first set of reels, second set of reels, and the shared base award-multiplier reel form a contiguous set of reels having a common axis of rotation, and the shared base award-multiplier reel enhances any winning outcomes in the first and/or second set of reels; initiating a game outcome by spinning at least one set of reels and the shared base award-multiplier reel; determining whether the game outcome of at least one set of reels is a winning outcome; and enhancing the winning outcome of at least one set of reels when an award-multiplier symbol is present on the shared base award-multiplier reel.

In accordance with another aspect of a preferred embodiment, the method includes: providing a game including two or more sets of reels and two or more shared base award-multiplier reels positioned adjacent to the two or more sets of reels, wherein the two or more sets of reels and the two or more shared base award-multiplier reels form a contiguous set of reels having a common axis of rotation, and the two or more shared base award-multiplier reels enhance any winning outcomes in the two or more sets of reels; determining whether the game outcome of at least one set of reels is a winning outcome; and enhancing the winning outcome of at least one set of reels when an award-multiplier symbol is present on at least one of the two or more shared base award-multiplier reels.

In accordance with another aspect of a preferred embodiment, the method includes: providing a game including one or more sets of reels and two or more shared base award-multiplier reels positioned adjacent to the one or more sets of reels, wherein the one or more sets of reels and the two or more shared base award-multiplier reels form a contiguous set of reels having a common axis of rotation, and the two or more shared base award-multiplier reel enhances any winning out-

3

comes in the one or more sets of reels; initiating a game outcome by spinning the one or more sets of reels and the shared base award-multiplier reel; configuring a pay table based on the location of the two or more shared base award-multiplier reels with respect to the one or more sets of reels; determining whether the game outcome of the one or more sets of reels is a winning outcome; and enhancing the winning outcome of the one or more sets of reels when an award-multiplier symbol is present on at least one of the two or more shared base award-multiplier reels.

Other features and advantages of the present invention will become apparent from the following detailed description, taken in conjunction with the accompanying drawings, which illustrate by way of example, the features of the present invention.

BRIEF DESCRIPTION OF THE DRAWING

FIG. 1 illustrates a front view of a preferred embodiment of a multiple bonus modifier game, constructed in accordance with the claimed invention, having a base game and two or more base award modifiers operating independently or simultaneously of each other;

FIG. 2 illustrates a front view of the another preferred embodiment of a multiple bonus modifier game, constructed in accordance with the claimed invention, having reels in a base game and a reel in a second base award modifier spinning about a substantially horizontal axis, while a reel in a first base award modifier spins about a substantially vertical axis;

FIG. 3 illustrates a front view of the another preferred embodiment of a multiple bonus modifier game, constructed in accordance with the claimed invention, having reels in a base game and a reel in a second base award modifier spinning about a substantially horizontal axis, while a reel in a first base award modifier spins about a substantially vertical axis;

FIG. 4 illustrates a screen shot of one embodiment of a shared award-modifier game having a winning event in a first base game where a shared award-modifier reel enhances the award of the first base game;

FIG. 5 illustrates a screen shot of another embodiment of a shared award-modifier game having a winning event in a second base game where a shared award-modifier reel enhances the award of the second base game;

FIG. 6 illustrates a screen shot of yet another embodiment of a shared award-modifier game having winning events in a first and second base game wherein a shared award-modifier reel enhances the awards of the first and second base games;

FIG. 7 illustrates a screen shot of one embodiment of a shared award-modifier game having two shared award-modifier reels;

FIG. 8 illustrates a screen shot of another embodiment of a shared award-modifier game;

FIG. 9 illustrates a screen shot of yet another embodiment of a shared award-modifier game;

FIG. 10A illustrates a screen shot of another embodiment of a game having a movable shared award-modifier reel;

FIG. 10B illustrates a screen shot of FIG. 10A after the shared award-modifier reel is moved; and

FIG. 11 illustrates one embodiment of a gaming system for use with an embodiment of a gaming machine having a shared award-modifier reel.

DETAILED DESCRIPTION

A preferred embodiment gaming machine, implemented in accordance with the claimed invention, provides a player with the opportunity to play a base game in conjunction with two

4

or more base award modifiers that operate independently or in conjunction with one another to modify a base game award. In this manner, player excitement is derived and heightened from the visual entertainment that occurs when the multiple base award modifiers act to increase the opportunities for a player to win, as well as the magnitude of those winnings. Referring now to the drawings, wherein like reference numerals denote like or corresponding parts throughout the drawings, and more particularly to FIGS. 1-2, there is shown a preferred multiple bonus modifier game 10.

Referring now to FIG. 1, a multiple bonus modifier game 10 preferably includes a base game and two or more base award modifiers operating independently or simultaneously of each other (i.e., the two or more base award modifiers operate independently of each other or in conjunction with each other to modify a base game award). Specifically, the multiple bonus modifier game 10 comprises: a base game 20 that includes a plurality of spinning reels, a first base award modifier 30 that includes at least one spinning reel, and a second base award modifier 40 that includes at least one additional spinning reel. It will be appreciated by those skilled in the art that whenever spinning reels are described herein, any indicia of spinning reels may be used without departing from the scope of the claimed invention. Such indicia of spinning reels include, by way of example only, and not by way of limitation, physical spinning reels, a video display of spinning reels, or other gaming presentations of spinning reels.

Preferably, the plurality of reels in the base game 20 is spun (or appears to be spun in the case of video representation embodiments). The outcome of the spinning reels in the base game 20 defines a base game award 25, if any (i.e., the outcome does not always produce an award). Additionally, the reel in the first base award modifier 30 is also spun. The outcome of the spinning reel in the first base award modifier 30 defines a first modifier award 35, if any (i.e., the outcome does not always produce an award). The first modifier award adjusts the base game award. Further, the at least one additional reel in the second base award modifier 40 is also spun. The outcome of the additional spinning reel in the second base award modifier 40 defines a second modifier award 45, if any (i.e., the outcome does not always produce an award). The second modifier award 45 (1) adjusts the combined base game award 25 and first modifier award 35 if both awards were given, (2) adjusts only the base game award 25 if only the base game award was given, and (3) adjusts only the first modifier award 35 if only the first modifier award was given. Thus, the first modifier award 35 and the second modifier award 45 operate independently or in conjunction with one another to modify a base game award 25.

As briefly described above, in a preferred embodiment of the multiple bonus modifier game 10 the two or more base award modifiers operate independently or simultaneously (in conjunction) with each other and the base award 25. Operating "independently" in this context means that each award will stand independently, regardless of whether or not another award was won. Specifically, if a base game award 25 was won, a first modifier award 35 was won, and a second modifier award 45 was lost, the base game award 25 and the first modifier award 35 would be given. If a base game award 25 was won, a first modifier award 35 was lost, and a second modifier award 45 was won, the base game award 25 and second modifier award 45 would be given. Further, in some preferred embodiments, if a base game award 25 was won, a first modifier award 35 was lost, and a second modifier award 45 was lost, the base game award 25 still would be given. Moreover, in other preferred embodiments, if a base game

5

award **25** was lost, a first modifier award **35** was won, and a second modifier award **45** was won, the first modifier award **35** and the second modifier award **45** would be given.

In comparison, operating “simultaneously” or “in conjunction with” in this context means that each award can be given at the same time as another award is given. Specifically, if a base game award **25** was won, a first modifier award **35** was won, and a second modifier award **45** was won, the base game award **25** and the first modifier award **35** and the second modifier award **45** would all be given together in combination. Accordingly, in a preferred embodiment of the multiple bonus modifier game **10**, if two bonus modifier awards (e.g., the first base award modifier **30** and the second base award modifier **40**) appear on the payline **50** along with a valid base pay, both actions are applied to the base pay. For example, three bars pay out 10 credits in the base game **20**. Next, a “+10 credits” symbol is achieved on the fourth reel (i.e., first base award modifier **30**). Finally, a “times 2” multiplier is achieved on the fifth reel (second base award modifier **40**). All symbols lie on the payline **50**. The resulting pay is (10+10) “times 2” or 40 credits. Thus, the multiple bonus modifier game **10** is faster to play than a standard primary game with a “secondary” bonus. Furthermore, the machine is less expensive to produce. Moreover, the payouts are more exciting than a standard primary game with a “secondary” bonus.

In a preferred embodiment of the multiple bonus modifier game **10**, the outcome of the plurality of spinning reels in the base game **20**, the outcome of the at least one spinning reel in the first base award modifier **30**, and the outcome of the at least one additional spinning reel in the second base award modifier **40**, are all displayed along a payline **50**. Accordingly, in a preferred embodiment, the first three reels depict the basic slot machine game **20** with the base pay published on a pay table. In one exemplary embodiment of the base game **20**, three bars pay out 10 credits. Continuing, in this embodiment, the fourth reel **30** and fifth reel **40** produce bonus actions (i.e., modifier awards **35** and **45**) that are applied to a base game award **25**. In one such example, the base game award **25** is multiplied by 10, has 100 credits added to its value, or another similar modifier.

Additionally, in one preferred embodiment, the spinning reels in the base game **20** spin about a substantially horizontal axis, while at least one reel of the base award modifiers **30** and/or **40** spins about a substantially vertical axis (as shown in FIG. 2). Further, in another preferred embodiment, the spinning reels in the base game **20** spin about a substantially horizontal axis, while a wheel of the base award modifiers **30** and/or **40** spins in a top box game (as shown in FIG. 3). Accordingly, in a preferred embodiment of the multiple bonus modifier game **10**, the first base award modifier **30** and/or the second base award modifier **40** include a trigger on one of the reels that can be modified by the other bonus reel. Thus, in one exemplary preferred embodiment, a “Monte Carlo style” bonus wheel could be triggered by a special symbol on the fourth reel (i.e., the first base award modifier) while an additional multiplier could appear on the fifth reel (i.e., the second base award modifier).

Referring again to FIG. 1, in one preferred embodiment of the multiple bonus modifier game **10**, any first modifier award **35** from the first base award modifier **30** is then added to any base game award **25** from the base game **20**. Additionally, in one preferred embodiment, a first modifier award **35** from the first base award modifier **30** is awarded only if a (non-zero) base game award was given. However, in another preferred embodiment, a first modifier award **35** from the first base award modifier **30** is awarded regardless of whether a base game award **25** was given. Moreover, in one preferred

6

embodiment, a first modifier award **35** from the first base award modifier **30** rewards a player with additional reel spins. In another preferred embodiment, a second modifier award **45** from the second base award modifier **40** is a multiplier of the base pay award **25**, if any (i.e., the base pay award **25** is not zero), and the first modifier award **35**, if any (i.e., first modifier award **35** is not zero), in combination.

In a preferred “five coin” embodiment of the multiple bonus modifier game **10**, the base game **20** requires three coins to initiate base game play, the first base award modifier **30** requires a fourth coin to initiate a first modifier play, and the second base award modifier **40** requires a fifth coin to initiate a second modifier play. Accordingly, the player “buys” these bonuses by paying for an extra coin for each of the bonus reels. Thus, in one preferred embodiment of a “five coin” game, the first three coins purchase any base game award from the base game that may appear on reels 1-3. The fourth coin purchases any bonuses that may appear on reel 4. The fifth coin purchases any bonuses that may appear on reel 5. In one preferred embodiment of the multiple bonus modifier game, reel 4 is an “adder” bonus, and reel 5 is a “multiplier” bonus. Since multipliers are generally more powerful than adders, the player is encouraged to insert the 5th coin.

In another preferred embodiment of the multiple bonus modifier game **10**, it includes a base game **20**, a first base award modifier **30**, and a second base award modifier **40**, in which at least one of the base game **20**, first base award modifier **30**, and second base award modifier **40** does not include spinning reels. In all other respects this embodiment of the multiple bonus modifier game **10** resembles the embodiments discussed above. The gaming format utilized in this (at least partially non-spinning reel) multiple bonus modifier game **10** includes by way of example only, and not be way of limitation, poker, various other card games, and the like. It will be appreciated by those skilled in the art that other known gaming formats may also be utilized.

In another preferred embodiment of the multiple bonus modifier game **10**, at least one of the first modifier awards **35** from the first base award modifier **30** rewards a player with a nil adjustment. Correspondingly, at least one of the second modifier awards **45** from the second base award modifier **40** rewards a player with a nil adjustment. In this context, a “nil adjustment” is an “award” that does not alter the original base award **20** (e.g., adding zero to a base award, multiplying a base award times one, and the like).

In still another preferred embodiment of the multiple bonus modifier game **10**, at least one of the first modifier awards **35** from the first base award modifier **30** gives a player a negative adjustment. Correspondingly, at least one of the second modifier awards **45** from the second base award modifier **40** gives a player a negative adjustment. In this context, a “negative adjustment” is an “award” that negatively alters the original base award **20** (e.g., subtracting credits from a base award, multiplying a base award times a fraction, and the like).

A preferred embodiment of the multiple bonus modifier game **10** includes multiple bonus reels working independently and/or in conjunction with one another to modify a base game award. One preferred embodiment utilizes a stepper-motor slot system with five spinning reels. However, as stated above, in another preferred embodiment, the multiple bonus modifier game **10** is incorporated into a video slot machine having five or more reels.

Another preferred embodiment is directed to a game having a shared award-modifier reel. Generally, the game comprises a first base game having a plurality of reels, a second base game having a plurality of reels, and a shared award-modifier reel positioned between or adjacent to the reels of the

first and second base games. During the play of the first or second base game, the shared award-modifier reel is spun. If an award-modifying symbol appears on the award-modifier reel, the award associated with the award-modifying symbol is applied to any winning outcome of the first and/or second base game.

Referring now to FIGS. 4-7, the game comprises a first base game **100** having three reels **102**, **104**, and **106**, a second base game **108** having three reels **110**, **112**, and **114**, and a shared award-modifier reel **116** positioned between or adjacent to the reels of the first and second base games. As shown in FIGS. 4-7, the shared award-modifier reel **116** includes a border to distinguish the award-modifier reel from the reels **102**, **104**, **106**, **110**, **112**, and **114** of the first and second base games. Alternatively, the shared award-modifier reel (not shown) does not include a border. In another embodiment, the shared award-modifier reel (not shown) is larger than the reels of the first and second base. In yet another embodiment, the shared award-modifier reel (not shown) has a different background color, markings, or patterns to distinguish the shared award-modifier reel from the reels **102**, **104**, **106**, **110**, **112**, and **114** of the first and second base games **100** and **108**, respectively.

Additionally, an award-enhancing symbol **118** is shown on the shared award-modifier reel **116**. The award-modifying symbol **118** may be a multiplier symbol (e.g., 2×, 3×, 4×, and the like), wild symbol, additional base game symbol, re-spin symbol, credit symbol (e.g., pay 10 credits, 100 credits, and the like), free game symbol, secondary game trigger symbol, tangible award symbol (e.g., tickets to shows, cars, jewelry, and the like), or a combination thereof. In other embodiments, sound effects, music, graphics, or animation are associated with or incorporated into the award-modifying symbol **118**.

According to one embodiment, upon initiating a game, the shared award-modifier reel **116** and the reels **102**, **104**, **106**, **110**, **112**, and **114** associated with the first and/or second base games **100** and **108**, respectively are spun. Alternatively, the shared award-modifier reel **116** is spun after the reels **102**, **104**, **106**, **110**, **112**, and **114** of the first or second base game **100** and **108**, respectively are spun. The shared award-modifier reel **116** may be stopped before, after, or concurrently with the stoppage of the reels **102**, **104**, **106**, **110**, **112**, and **114** of the first and second base games **100** and **108**, respectively. In another embodiment, the shared award-modified reel **116** is spun once the reels of the first or second base game **100** and **108**, respectively have stopped.

Winning outcomes for the first game **100** are determined by reading the pay lines on reels **102**, **104**, and **106** from left to right. Winning outcomes for the second game **108** are determined by reading the pay lines on the reels **110**, **112**, and **114** from right to left. However, either set of reels may be read from any appropriate direction. While the first and second games **100** and **108** are played independently, the first and second games share the award-modifier reel **116**. Accordingly, any award-modifier symbol **118** appearing on the award-modifier reel **116** may be applied to the winning outcome on pay lines in either or both the first and second base games **100** and **108**.

FIG. 4 illustrates a screen shot of one possible game outcome where a winning outcome (as delineated by a pay line **120**) is presented in the first game **100** and an award-modifier symbol **118** is also presented on the award-modifier reel **116**. The award associated with the award-modifying symbol **118** (i.e., the 2× multiplier) is then applied to the winning outcome. As a result, the winning outcome of 100 credits is multiplied by a factor of two for a payout of 200 credits. As shown in FIG. 4, the award-modifier symbol **118** appears in

the center of the award-modifier reel **116** and not on the pay line associated with of the first base game **100**, yet the award associated with the award-modifier symbol is still applied to the winning outcome of the first base game. That is, the presence of the award-modifier symbol **118** in the shared award-modifier reel **116** results in an enhancement of the winning outcome. However, in alternate embodiments, the award-modifier symbol **118** must appear on a pay line to be applied to a winning outcome in either the first or second base games **100** and **108**, respectively. While the screen shot of FIG. 4 shows a single award-modifying symbol **118**, a plurality of award-modifying symbols may be shown on the award-modifier reel **116**. In one embodiment, more than one award-modifying symbol **118** is presented on the award-modifier reel **116**, the award-modifying symbol needs to appear on the same pay line as a winning outcome in the first or second base games **100** and **108**, respectively. Alternatively, the award-modifying symbols **118** need not be present on a winning pay line in order to enhance a winning outcome in the first or second base games **100** and **108**, respectively.

FIG. 5 illustrates a screen shot of one possible game outcome for the second game **108**. A winning outcome is shown by a pay line **122** as the reels **110**, **112**, and **114** are read from right to left. Additionally, an award-modifier symbol **118** is also presented on the shared award-modifier reel **116**. The award associated with the award-modifier symbol **118** (i.e., the 2× multiplier) is then applied to the winning outcome of the second game **108**. As a result, the winning outcome of 20 credits is multiplied by a factor of two for a payout of 40 credits. FIG. 6 illustrates a screen shot that combines the game outcomes of FIGS. 4 and 5. That is, the winning outcomes of the first and second base games **100** and **108** may be shown approximately at the same time. Alternatively, the winning outcomes of the first and second base games **100** and **108** may be shown sequentially (as depicted in FIGS. 4 and 5).

As shown in FIGS. 4-6, the first and second games **100** and **108** are games that present a plurality of pay lines. According to one embodiment, the shared award-modifier reel **116** is spun only if the player places a wager on all the pay lines of the game. In another embodiment, the shared award-modifier reel **116** is spun if the player makes a maximum wager on at least one pay line. In an alternate embodiment, the shared award-modifier reel **116** is spun regardless of the amount or number of wagers made by the player.

FIG. 7 illustrates another embodiment of a game having a plurality of base games **130**, **132**, and **134** that are separated by shared award-modifier reels **136** and **138**. As shown in FIG. 7, each game has three reels, but those skilled in the art will appreciate that any number of reels for each game is possible. For example, each game may have the same number of reels, different number of reels, or any combination thereof.

Furthermore, the embodiment shown in FIG. 7 is similar to the embodiment disclosed in FIGS. 4-6 except that a second, shared award-modifier reel **138** is placed between the second base game **132** and the third base game **134**. Because the second base game **132** is positioned between two shared bonus reels **136** and **138**, the second base game may reference either or both the shared bonus reels. Accordingly, winning outcomes in the second base game **132** may be determined by reading the reels from left-to-right, right-to-left, in both directions, or any other appropriate direction. Furthermore, an award symbol appearing in either or both of the shared award-modifier reels **136** and **138** are applied to any winning outcome in the second base game. While the games **130**, **132**, and **134** are referred to as the first, second, and third games, the

use of the adjectives, first, second, and third, is not meant to be limiting. For example, a player's wagers may be applied to the first game, the third game, and then the second game.

FIG. 8 illustrates yet another embodiment of a game having a base game **140** and shared award-modifier reels **142** and **144** on either side of the base game. As shown in FIG. 8, the base game **140** is a three reel game, but those skilled in the art will appreciate that any number of reels (e.g., 2, 4, 5, 6, 7, 9, or more reels) may be provided in the base game. Because the base game **140** is positioned between two shared award-modifier reels **142** and **144**, the base game may reference either or both of the shared award-modifier reels. Accordingly, winning outcomes in the base game **140** may be determined by reading the reels from left-to-right, right-to-left, in both directions, or any other appropriate direction. In an alternate embodiment, the player may elect to place both shared award-modifier reels **142** and **144** on one side of the base game **140**. That is, before game play begins, the player may select the location of the shared award-modifier reels **142** and **144** (i.e., left or right of the base game reels).

FIG. 9 illustrates another embodiment of a game having first and second base games **150** and **152** and shared award-modifier reels **154** and **156** positioned between or adjacent to the first and second base games. Given the positioning of the award-modifier reels **154** and **156**, a winning outcome in either or both base games **150** and **152** may be enhanced by either one or both of the award-modifier reels **154** and **156**. For example, a winning outcome in the first base game **150** may be enhanced by an award-enhancing symbol in either of the first or second award-modifier reels **154** and **156**. If an award-enhancing symbol appears in both the award-modifier reels **154** and **156**, according to one embodiment, the winning outcome of a base game is enhanced sequentially. For example, a winning outcome paying 10 credits is doubled to 20 credits if a 2× multiplier symbol appears in the first award-modifier reel **154** and the enhanced award of 20 credits is further enhanced (e.g., tripled) to 60 credits if a 3× multiplier symbol appears in the second award-modifier reel **156**. Alternatively, the award-modifier symbols may be summed together and then applied to the winning outcome in the base game. Using the previous example, the 2× and 3× multipliers are summed together (to net a 5× multiplier) and then applied to the winning outcome of 10 credits to result in a 50-credit award.

FIGS. 10A and 10B illustrate yet another embodiment of a game having a plurality of base games **160** and **162** that share a moveable award-modifier reel **164**. As shown in FIG. 10A, the award-modifier reel **164** is positioned between or adjacent to a first base game **160** having three reels and a second base game having four reels **162**. The award-modifier reel **164** may be moved to a position such that in the direction of the arrow results in a game wherein the first base game **160** has four reels and the second base game **162** has three reels. While FIGS. 10A and 10B show the award-modifier reel **164** moving one position to the right, it is contemplated that the award-modifier reel may be moved to the left, in either direction, or moved more than one position at a time.

According to various embodiments, a player or a game controller may move the award-modifier reel **164**. For example, the player may be given the opportunity to move the award-modifier reel **164** prior to initiating the game and/or prior to initiating the spinning of the reels. Alternatively, the player is required to pay for the opportunity and/or place a maximum wager in order to move the award-modifier reel **164**. In those embodiments that allow the player to move the location of the award-modifier reel **164**, the gaming machine may be provided with one or more switches/buttons, a toggle

switch (not shown), mouse, trackball, touch glass, touch screen, joystick, mini-joystick, or other input means known or developed in the art. In another embodiment, a game controller may randomly select the position of the award-modifier reel **164**. In yet another embodiment, a gaming establishment operator may set the position of the award-modifier reel **164**. Alternatively, the gaming establishment operator may remotely control or set the position of the award-modifier reel **164**.

In the embodiments of a game having two or more base games, the second game is initiated in response to a plurality of trigger events. According to one embodiment, the second game is triggered in response to the number and amount of wagers made by a player. For example, a player making a maximum wager on at least one pay line on the first game would trigger the second game. In another embodiment, the second game is triggered when a player wagers on a predetermined number of pay lines. For example, a player making a wager on all the pay lines of the first game would trigger the second game. Alternatively, for example, in a 50-line game where each game has 25 lines, all the pay lines of the second game are selected when the player makes a wager on 26 lines (i.e., all 25 lines in the first game and one pay line in the second game).

Furthermore, in those games that are capable of presenting two or more base games, the mathematical model used to determine the probabilities of winning outcomes for the first base game and any other base games may be varied. Alternatively, the mathematical model of the first and second games is modified such that the payouts for the first and second game are different. In addition to modifying the mathematical model of the first and second games, the first and second games may be two entirely different games that share an award-modifier reel. Accordingly, each game may have different reel layouts, numbers of symbols, and winning combinations, and payouts.

In one embodiment, the above-disclosed games are presented on a gaming machine having a video game display. The game display may be a flat panel display including, by way of example only, and not by way of limitation, liquid crystal, plasma, electroluminescent, vacuum fluorescent, field emission, LCOS (liquid crystal on silicon), and SXRD (Silicon Xtal Reflective display), or any other type of panel display known or developed in the art. These flat panel displays may use panel technologies to provide digital quality images including, by way of example only, and not by way of limitation, EDTV, HDTV, or DLP (Digital Light Processing). Additionally, the game display may also include a touch screen or touch glass system (not shown).

In another embodiment, the game display comprises a plurality of mechanical reels. In yet another embodiment, the game display comprises a combination of mechanical reels and video depictions of reels. For example, the gaming machine may include mechanical reels for the base games and a video depiction of a reel for the shared bonus modifier reel. Alternatively, the base game may be a video depiction of a plurality of reels and the shared bonus modifier a mechanical reel.

In another embodiment, a gaming machine is operatively connected, via a network connection, to a casino gaming system. Referring to FIG. 11, a casino gaming system **210** is shown. The casino gaming system **210** comprises a back-end server system **212**, network bridges **220**, a network rack **222**, gaming machines **224** and game management units **226** all connected via a system network.

A variety of types of servers may be included in the back-end server system **212**. The type of server used is generally

11

determined by the platform and software requirements of the gaming system. Additionally, the back-end server system **212** may be configured to comprise multiple servers. In one embodiment, as illustrated in FIG. **11**, the back-end server system **212** is configured to include three servers. Specifically, servers **214**, **216** and **218** form the back-end server system **212**, or the back-end servers. In one example, server **214** is a windows-based server, server **216** is an IBM RS6000 based server, and server **218** is an IBM AS/400 based server. Of course, one of ordinary skill in the art will appreciate that different types of servers may also be used. The back-end server system **212** performs several fundamental functions. For example, the back-end server system **212** can collect data from the slot floor as communicated to it from other network components and maintain the collected data in its database. The back-end server system **212** may use slot floor data to generate a report used in casino operation functions. Examples of such reports include, but are not limited to, accounting reports, security reports, and usage reports. The back-end server system **212** may also pass data to another server for other functions. Alternatively, the back-end server system **212** may pass data stored on its database to floor hardware for interaction with a game or slot player. For example, data such as a game player's name or the amount of a ticket being redeemed at a game, may be passed to the floor hardware. Additionally, the back-end server system **212** may comprise one or more data repositories for storing data. Examples of types of data stored in the back-end server system data repositories include, but are not limited to, information relating to individual player play data, individual game long-term accounting data, cashable ticket data, sound data including optimum audio outputs for various casino settings. Additionally, animation and graphic files may also be stored in the back-end server system data repositories.

The network bridges **220** and network rack **222** shown in FIG. **11** are networking components. These networking components, which may be classified as middleware, facilitate communications between the back-end server system **212** and the game management units **226**. The network bridges **220** concentrate the many game management units **226** (2,000 on average) into a fewer number (nominally 50:1) of connections to the back-end server system **212**. Additionally, the network rack **222** may also concentrate game management units **226** into a fewer number (2000:1) of connections to the back-end server system **212**. The network bridges **220** and network rack **222** may comprise data repositories for storing network performance data. Such performance data may be based on network traffic and other network related information.

Optionally, the network bridge **220** and the network rack **222** may be interchangeable components. For example, in one embodiment, a casino gaming system may comprise only network bridges and no network racks. Alternatively, in another embodiment, a casino gaming system may comprise only network racks and no network bridges. Additionally, in an alternative embodiment, a casino gaming system may comprise any combination of one or more network bridges and one or more network racks.

The gaming machines **224** illustrated in FIG. **1** act as terminals for interacting with a player playing a casino game. In various embodiments, any of the gaming machines **224** may be a mechanical reel spinning slot machine, video slot machine, video poker machine, keno machine, video blackjack machine, or a gaming machine offering one or more of the above-described games. Additionally, each gaming machine **224** may comprise one or more data repositories for storing data. Examples of information stored by the gaming

12

machines **224** include, but are not limited to, maintenance history information, long-term play data, real-time play data and sound data. The sound data may include, but is not limited to, audio files, sound clips, .wav files, mp3 files and sound files saved in various other formats. Furthermore, each gaming machine **224** comprises an audio system (not shown) for outputting sound. Typically, the audio system comprises one or more speakers, an amplifier, and access to one or more sound files.

Game management units (GMUs) connect gaming machines to network bridges. The function of the GMU is similar to the function of a network interface card connected to a desktop personal computer (PC). Referring to FIG. **11**, a GMU **226** connects a gaming machine **224** to the network bridge **220**. Some GMUs **226** have much greater capability and can perform such tasks as calculating a promotional cash-back award for a player, generating a unique ID for a cash redeemable ticket, and storing limited amounts of game and transaction based data. Some GMUs **226** may comprise one or more data repositories for storing data. The types of data stored by the GMUs **226** may include, but is not limited to, real-time game data, communication link performance data, real-time player play data and sound data including sound files and audio clips.

In one embodiment, the GMU **226** is a separate component located outside the gaming machine. Alternatively, in another embodiment, the GMU **226** is located within the gaming machine. Optionally, in an alternative embodiment, one or more gaming machines **224** connect directly to a network bridge **220** and are not connected to a GMU **226**.

The back-end server system **212** may further comprise a slot data system (not shown) stored in one or more data repositories. The slot data system is a computerized accounting and machine monitoring system. Optionally, the back-end server system **212** may also comprise a casino management system (not shown). The casino management system provides casinos with a fully integrated, user-friendly software application to manage casino player tracking, promotional, and accounting functions. Features of the casino management system may include player tracking and analysis, table-game management, cage and credit, offer and event management, player club enrollment and redemption, and comprehensive reports and data analysis.

Additionally, the back-end server system **212** may feature a player tracking system (not shown). The player tracking system allows a casino to monitor the gaming activities of various players. Additionally, the player tracking system is able to store data relating to a player's gaming habits. That is, a player can accrue player points that depend upon the amount and frequency of their wagers. Casinos can use these player points to compensate the loyal patronage of players. For example, casinos may award or "comp" a player free meals, room accommodations, tickets to shows, and invitations to casino events and promotional affairs.

Typically, the player tracking system is operatively connected to one or more input components on a gaming machine **224**. These input components (not shown) include, but are not limited to, a slot for receiving a player tracking card, a keypad or equivalent, an electronic button receptor, a touch screen, or the like. The player tracking system may also include a database of all qualified players (i.e., those players who have enrolled in a player rating or point accruing program). Generally, the database for the player tracking system is separate from the gaming machine **224**.

In a casino gaming system utilizing a player tracker system, player data may be retrieved from a recognized player to personalize an animated event. For example, in a triggered

13

animated event, information pertaining to the player, such as player name, may be used to customize the animation. Specifically, the animated event may comprise a picture of the player, or the player's name. Additionally, based on the player's status, the player may be entitled to a maximum number of wild symbols when the animated event is triggered. For example, a player having VIP status may be entitled to more wild symbols than a player having non-VIP status.

The various embodiments described above are provided by way of illustration only and should not be construed to limit the claimed invention. Those skilled in the art will readily recognize various modifications and changes that may be made to the claimed invention without following the example embodiments and applications illustrated and described herein, and without departing from the true spirit and scope of the claimed invention, which is set forth in the following claims.

What is claimed:

1. A method for enhancing a winning outcome in a game, the method comprising:

providing a game including a first set of reels, a second set of reels, and a shared base award-multiplier reel positioned adjacent to the first and second set of reels, wherein the first set of reels, second set of reels, and the shared base award-multiplier reel form a contiguous set of reels having a common axis of rotation, and the shared base award-multiplier reel enhances any winning outcomes in the first and/or second set of reels;

initiating a game outcome by spinning at least the first and/or second set of reels and the shared base award-multiplier reel;

determining whether the game outcome of at least the first and/or second set of reels is a winning outcome; and enhancing the winning outcome of at least the first and/or second set of reels when an award-multiplier symbol is present on the shared base award-multiplier reel.

2. The method of claim **1**, further comprising:

spinning an additional set of reels from the first and second set of reels when the received player input is a maximum wager or a selection of all the pay lines of the game;

determining whether the game outcome of the additional set of reels is a winning outcome; and

enhancing the winning outcome of the additional set of reels when an award-multiplier symbol is present on the shared base award-multiplier reel.

3. The method of claim **2**, wherein determining the winning outcome in the first or second set of reels further comprises reading the reels from right-to-left, left-to-right, or a combination thereof.

4. The method of claim **1**, further comprising:

spinning an additional set of reels from the first and second set of reels in response to player input satisfying a predetermined wager amount or a predetermined number of pay lines of the game;

determining whether the game outcome of the additional set of reels is a winning outcome; and

enhancing the winning outcome of the additional set of reels when an award-multiplier symbol is present on the shared base award-multiplier reel.

5. The method of claim **4**, wherein determining the winning outcome in the first or second set of reels further comprises reading the reels from right-to-left, left-to-right, or a combination thereof.

14

6. The method of claim **1**, further comprising receiving player or gaming establishment operator input adjusting the location of the shared base award-multiplier reel by selecting one reel of the first or second set of reels.

7. The method of claim **6**, further comprising altering at least one pay table in response to the location of the shared base award-multiplier reel with respect to the first and second set of reels.

8. A method for enhancing a winning outcome in a game, the method comprising:

providing a game including a first set of reels, a second set of reels, and two or more shared base award-multiplier reels positioned adjacent to the first and second sets of reels, wherein the first and second sets of reels and the two or more shared base award-multiplier reels form a contiguous set of reels having a common axis of rotation, and the two or more shared base award-multiplier reels enhance any winning outcomes in the first and/or second sets of reels;

determining whether the game outcome of at least the first and/or second set of reels is a winning outcome; and enhancing the winning outcome of at least the first and/or second set of reels when an award-multiplier symbol is present on at least one of the two or more shared base award-multiplier reels.

9. The method of claim **8**, wherein determining the winning outcome in a first set of reels further comprises reading the reels from right-to-left, left-to-right, or in both directions.

10. The method of claim **8**, further comprising:

spinning a second set of reels when the received player input is a maximum wager or a selection of all the pay lines of the game;

determining whether the game outcome of the second set of reels is a winning outcome; and

enhancing the winning outcome of at least one set of reels when an award-multiplier symbol is present on at least one of the two or more shared base award-multiplier reels.

11. The method of claim **8**, wherein determining the winning outcome in a first or second set of reels further comprises reading the reels from right-to-left, left-to-right, or in both directions.

12. The method of claim **8**, further comprising:

spinning a second set of reels in response to player input satisfying a predetermined wager amount or a predetermined number of pay lines of the game;

determining whether the game outcome of the second set of reels is a winning outcome; and

enhancing the winning outcome of the second set of reels when an award-multiplier symbol is present on the shared base game award-multiplier reel.

13. The method of claim **12**, wherein determining the winning outcome in a first or second set of reels further comprises reading the reels from right-to-left, left-to-right, or in both directions.

14. The method of claim **8**, further comprising altering at least one pay table in response to the location of the shared base game award-multiplier reels with respect to the two or more sets of reels.

15. A method for enhancing a winning outcome in a game, the method comprising:

providing a game including a first set of reels, a second set of reels, and two or more shared base award-multiplier reels positioned adjacent to the first and second sets of reels, wherein the first and second sets of reels and the two or more shared base award-multiplier reels form a contiguous set of reels having a common axis of rota-

15

tion, and the two or more shared base award-multiplier reel enhances any winning outcomes in the first and/or second sets of reels;
initiating a game outcome by spinning the first and/or second sets of reels and the shared base award-multiplier reel;
configuring a pay table based on the location of the two or more shared base award-multiplier reels with respect to the first and/or second sets of reels;
determining whether the game outcome of the first and/or second sets of reels is a winning outcome; and

16

enhancing the winning outcome of the first and/or second sets of reels when an award-multiplier symbol is present on at least one of the two or more shared base award-multiplier reels.

5 **16.** The method of claim **15**, wherein determining the winning outcome in the one or more sets of reels further comprises reading the reels from right-to-left, left-to-right, or a combination thereof.
