DESIGN.

W. MASTERS.

STOVE.

No. 16,692.

Patented May 18, 1886.

UNITED STATES PATENT OFFICE.

WILLIAM MASTERS, OF KANSAS CITY, MISSOURI.

DESIGN FOR A STOVE.

SPECIFICATION forming part of Design No. 16,692, dated May 18, 1886.

Application filed March 11, 1886. Serial No. 194,893. Term of patent 7 years.

To all whom it may concern:

Be it known that I, WILLIAM MASTERS, a citizen of the United States, residing at Kansas City, in the State of Missouri, have invented and produced a new and original Design for Stoves, of which the following is a specification, reference being had to the accompanying photographic illustration.

In this illustration a front perspective view of my newly-designed stove is shown.

My present invention consists in the novel design for a stove hereinafter described, illustrated in the accompanying photographic view, and particularly defined in the claim at the end of the specification.

A designates the fire-pot of the stove, which is cylindrical in general contour, the lower portion being of somewhat reduced diameter, as seen at *a*. Above the fire-pot A is the portion B, of general cylindrical shape, with diameter diminishing from the top plate, C, to the contracted part *b*, which joins the fire-pot A. The top plate, C, is flat upon its upper surface, and is provided with suitable covers, *c*, and pipe-collar *c'*. Below the fire-pot A is the grate-ring D, which rests upon the flat upper surface of the base E. The base E is of general truncated pyramidal shape, the several corners being cut away, as seen at *e*. The upper portion of the base is contracted,

as at *c'*, and above such point is provided with the raised ornamental figures *e'*. The lower portion of the base is ornamented with the raised pattern seen at *e'*. The front of the base E is provided with a door, *E'*, having openings *e'* therein and rim *e'*, but otherwise corresponding in general outline and configuration to the sides of the base.

Beneath the base E is the bottom F, that is flat on its upper face, and has its edge *f* following in general outline the sides of the base E. The feet G, whereon the bottom rests, are of irregular shape shown, having the part *g* with inclined sides *g'* and with the raised cross-like figure *g''* upon its face. Beneath the part *g* the feet are contracted and inwardly curved, as at *g''*, to the end part, *g'*, the sides whereof inclined, as shown.

I claim—

The design for a stove comprising the fire-pot A, of general cylindrical shape, the portion B, larger than the fire-pot, the top C, the four-sided base E, the bottom F, and the feet G, the whole design having substantially the general configuration shown.

WILLIAM MASTERS.
