Primary Examiner—Bernard Ansher

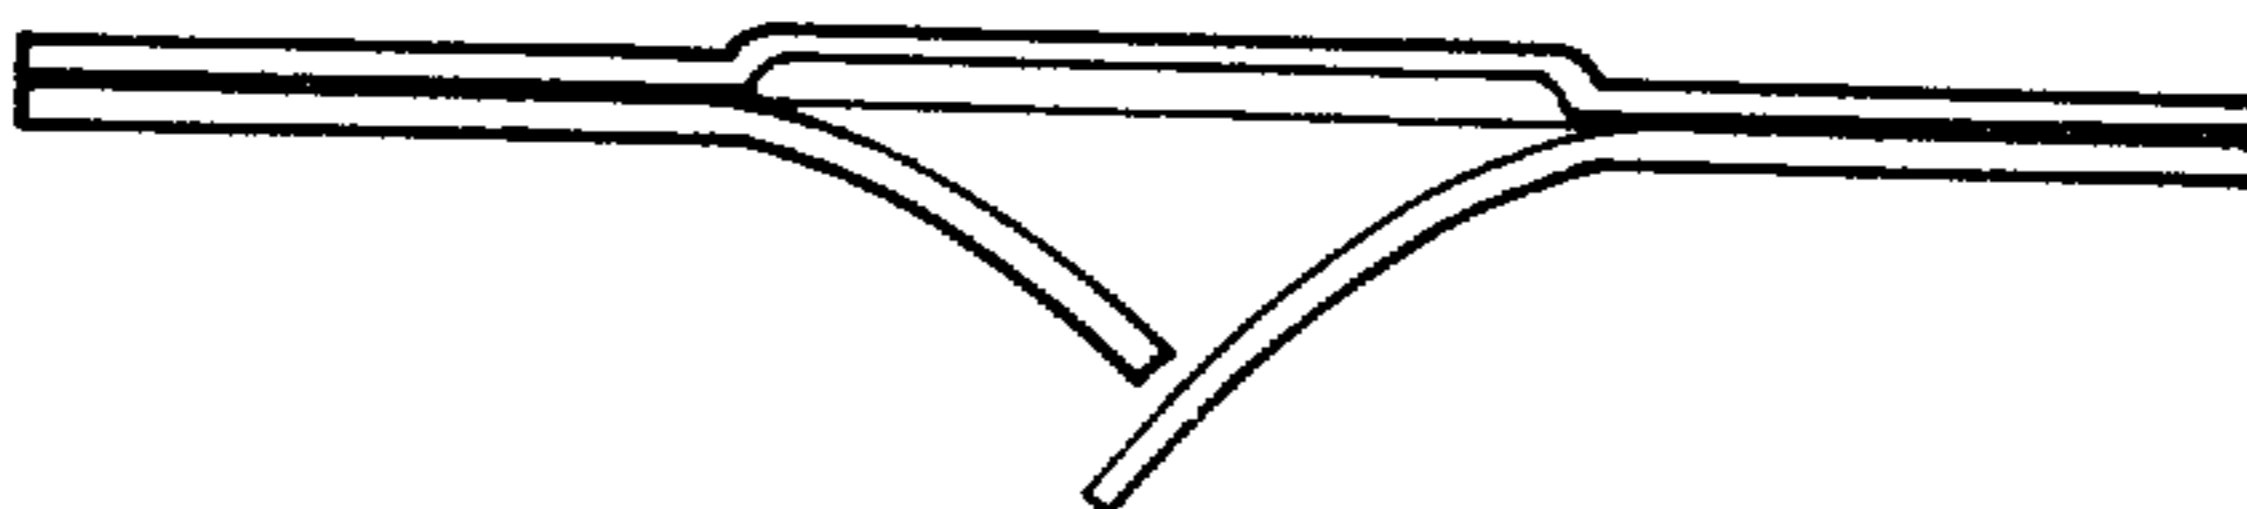

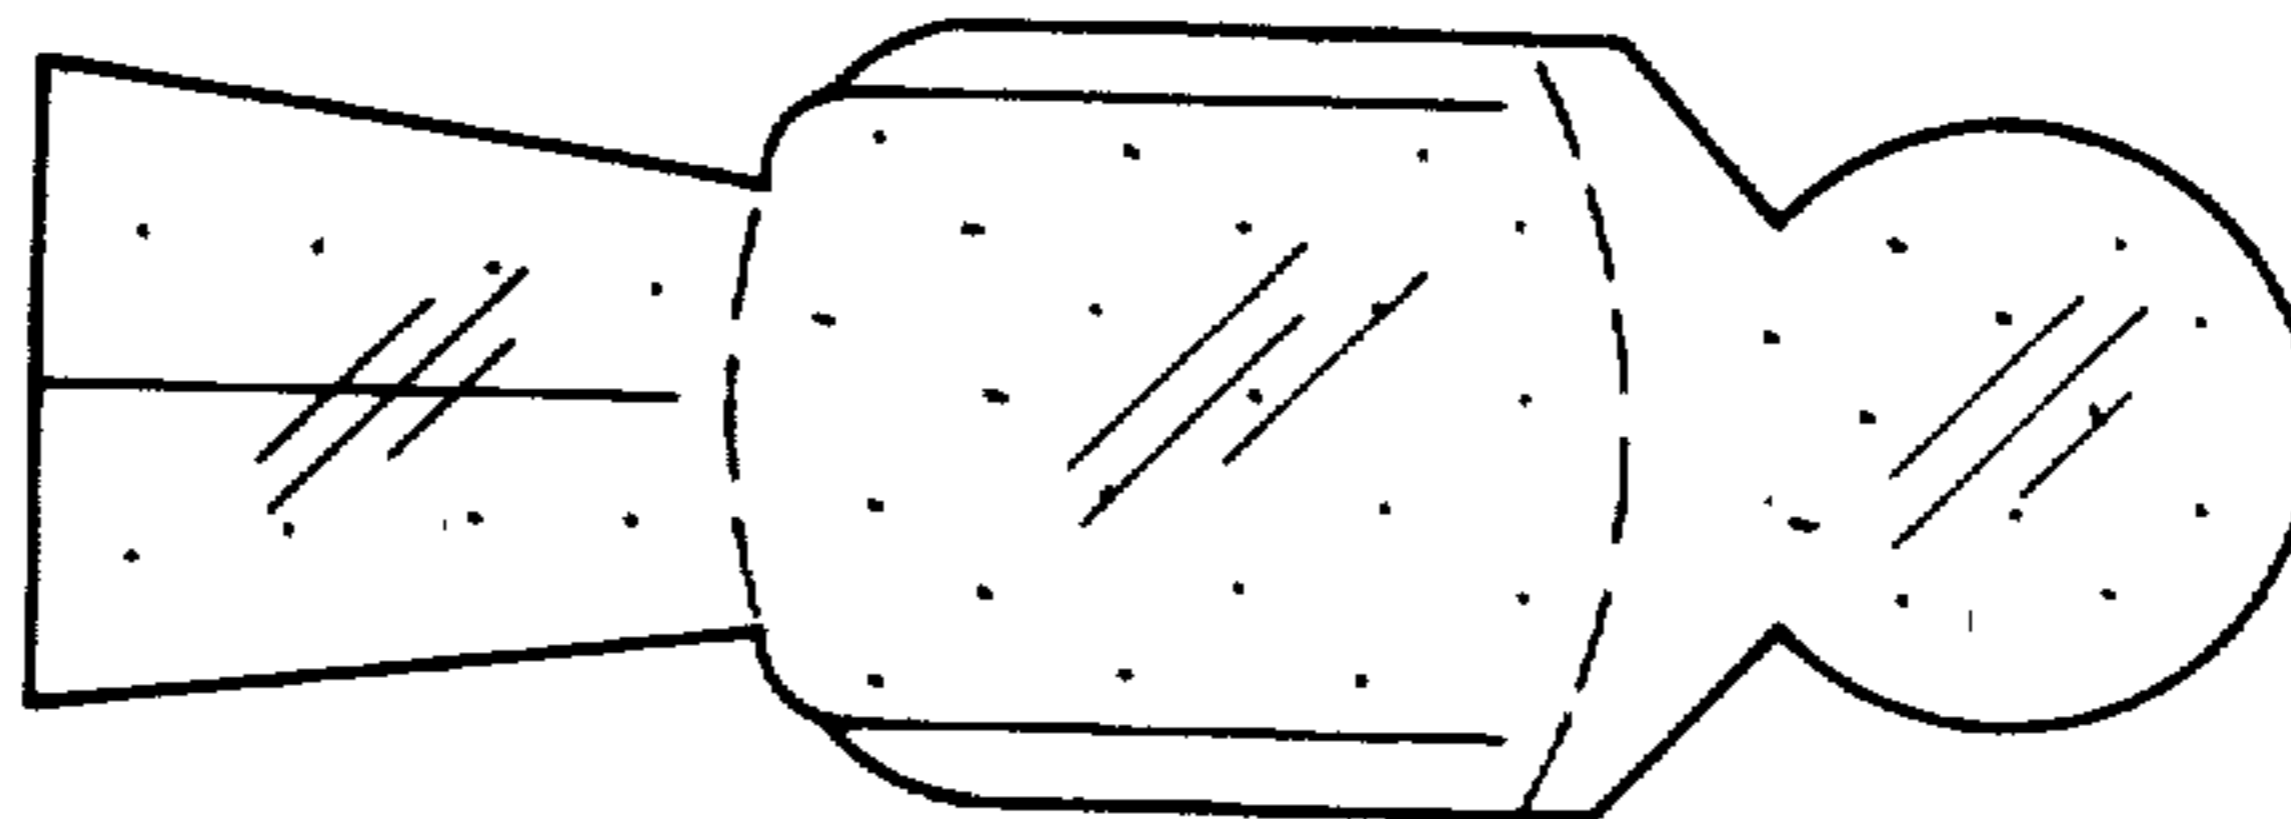

[57] CLAIM

The ornamental design for a decorated adhesive bandage, substantially as shown and described.

FIG. 1 is a top plan view of a decorated adhesive bandage, showing my new design;  
 FIG. 2 is a side elevation thereof of bandage and central pad, said elevation serving either side, both of which being essentially the same;  
 FIG. 3 is a side elevation thereof of the bandage only, said elevation serving for either side, both of which being essentially the same;  
 FIG. 4 is an end elevation as seen from the left of FIG. 3, said elevation serving for either end, both of which being essentially the same;  
 FIG. 5 is an end elevation as seen from the left of FIG. 2, said elevation serving for either end, both of which being essentially the same;  
 FIG. 6 is a bottom plan view thereof.

Now it is seen that there is herein provided a shaped bandage with decoration and ornamentation that accomplishes all the objectives of the instant invention and others, including advantages of commercial import. It is readily seen that the basic bandage is subject to manufacture in a multitude of shapes, sizes, types, materials, constructions, and with widely ranging utilitarian features, and by many methods or processes.

The design-shapes and decoration possible offer a multitude of selections, sizes, arrangements, combinations produced and decorated by any of many processes or methods of manufacture and imprinting, in black and white and/or in color, and may be described by many descriptive names. Therefore, since the interpretation, embodiments, and modifications of the instant inventive concept are many, it is understood that the full possibilities may include examples illustrated and/or discussed herein but are not limited to them, the foregoing to be interpreted merely as illustrative.
