[57] CLAIM

The ornamental design for a decorated adhesive bandage, substantially as shown and described.

DESCRIPTION

FIG. 1 is a top plan view of a decorated adhesive bandage, showing my new design;

FIG. 2 is a side elevation thereof of bandage and central pad, said elevation serving for either side, both of which are essentially the same;

FIG. 3 is a side elevation thereof of bandage only, said elevation serving for either side, both of which are essentially the same;

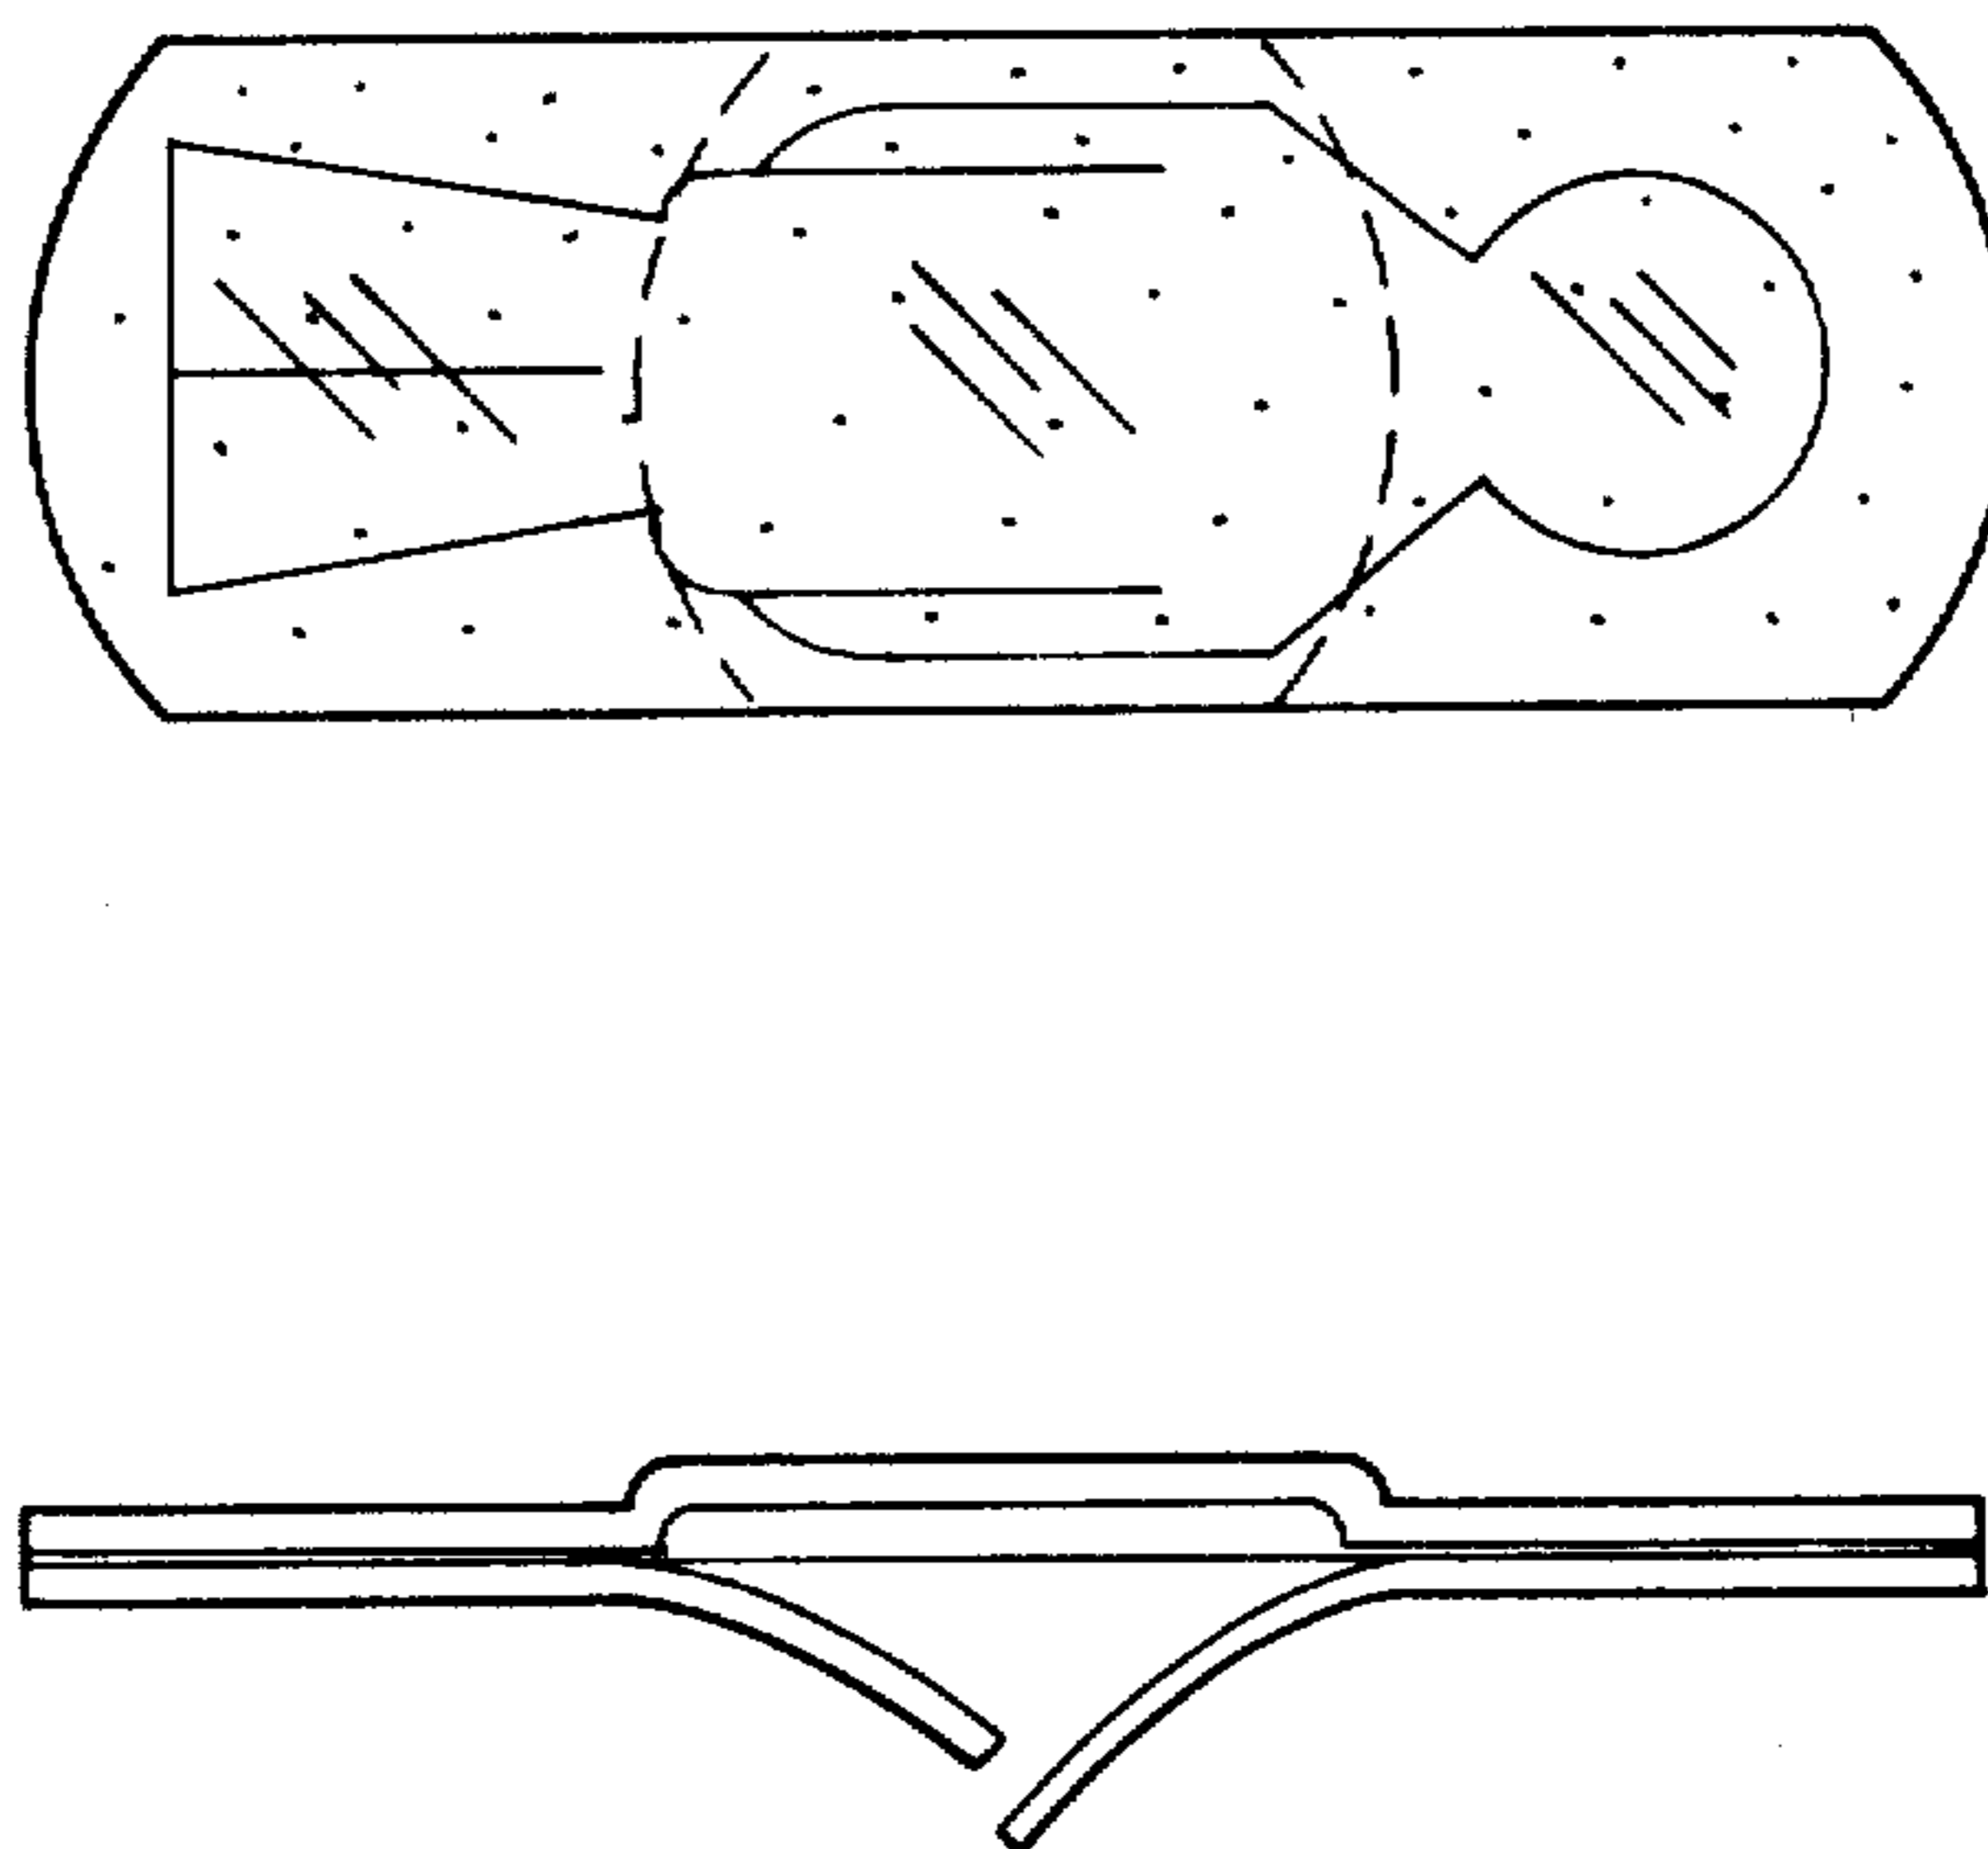

FIG. 4 is a bottom plan view thereof;

FIG. 5 is an end elevation as seen from the left of FIG. 3, said elevation serving for either end, both of which are essentially the same;

FIG. 6 is an end elevation as seen from the left of FIG. 2, said elevation serving for either end, both of which being essentially the same.

Now it is seen that there is herein provided a decorated bandage that accomplishes all the objectives of the instant invention and others, including advantages of commercial import.

It is readily seen that the basic bandage is subject to manufacture in a multitude of shapes, sizes, types, materials, constructions, and with widely ranging utilitarian features, and by many methods or processes. The decoration and/or ornamentation possible offer a multitude of selections, sizes, arrangements, combinations, imprinted, applied, or made a part of the bandage by any of many processes or methods in black and white and/or in color, and may be described by many descriptive names. Therefore, since the interpretation, embodiments, and modifications of the instant inventive concept are many, it is understood that the full possibilities may include the examples illustrated and/or discussed herein but are not limited to them, the foregoing to be interpreted merely as illustrative.
