[57] **CLAIM**

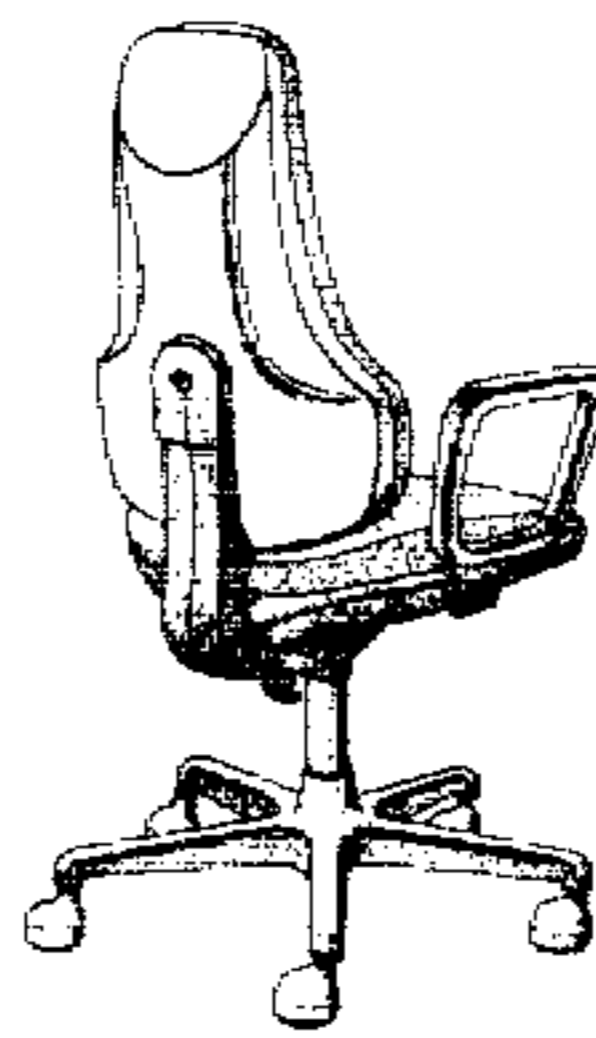

The ornamental design for an upholstered chair, as shown and described.

**DESCRIPTION**

FIG. 1 is a front perspective view of an upholstered chair showing my new design;

FIG. 2 is a rear perspective view.

The invention is characterized by the ornamental appearance of its back portion. The periphery of the back portion extends transversely at its lower edge across the width of the seat portion to its side edges; rises symmetrically at its side edges to approximately the height of the arms where it tapers symmetrically inwardly toward the center of the back portion and then rises symmetrically upwardly; and finally extends transversely at its upper edge to its side edges. The rear face of the seat portion extends from the upper edge downwardly and rearwardly to a symmetrically, upwardly curved edge which merges with symmetrically contoured depressions extending upwardly and inwardly toward the center of the face, from approximately the height of the arms.
