[57] CLAIM

The ornamental design for a control panel assembly for a combination lock and the like, as shown and described.

DESCRIPTION

FIG. 1 is a perspective view of a first embodiment of a control panel assembly for a combination lock and the like embodying my design;

FIG. 2 is a top plan view of the control panel assembly of FIG. 1;

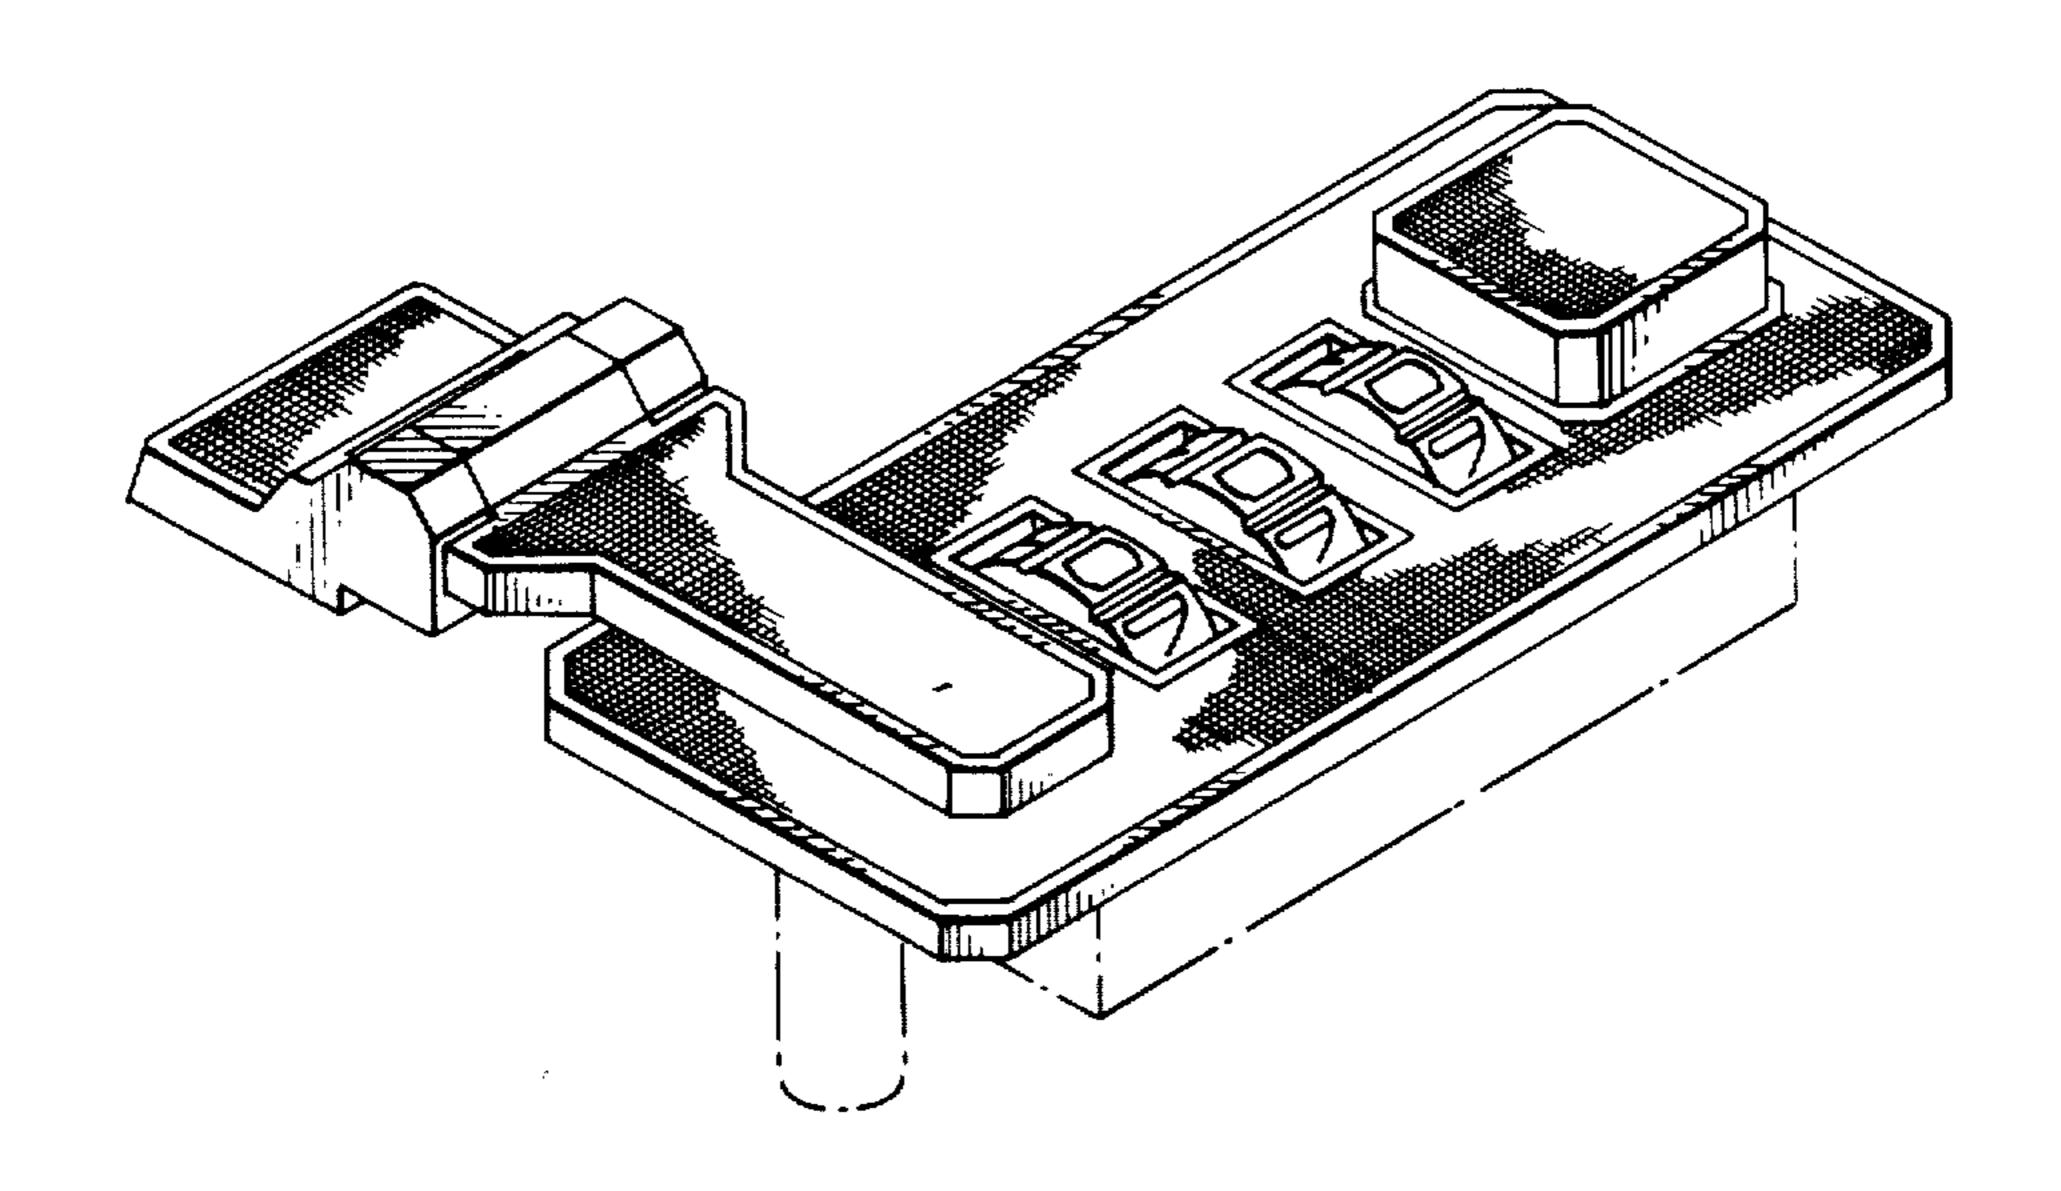

FIG. 3 is a front elevational view of the control panel assembly of FIG. 1;

FIG. 4 is a rear elevational view of the control panel assembly of FIG. 1;

FIG. 5 is a side elevational view as seen from the left of FIG. 1;

FIG. 6 is a side elevational view as seen from the right of FIG. 1.

The structure shown in phantom lines in the drawings, which may be hidden from view when the control panel assembly is in its intended environment is merely illustrative of a type of construction which may be employed with the control panel assembly. The structure shown in phantom lines forms no part of the design sought to be patented. The novelty of the design sought to be patented resides in the contrasting nature of the shaded surfaces of the assemblies of each embodiment as compared with the remaining surfaces of the respective assemblies, thereby providing each assembly with a distinctive bimetallic appearance. No restriction is intended as to color.

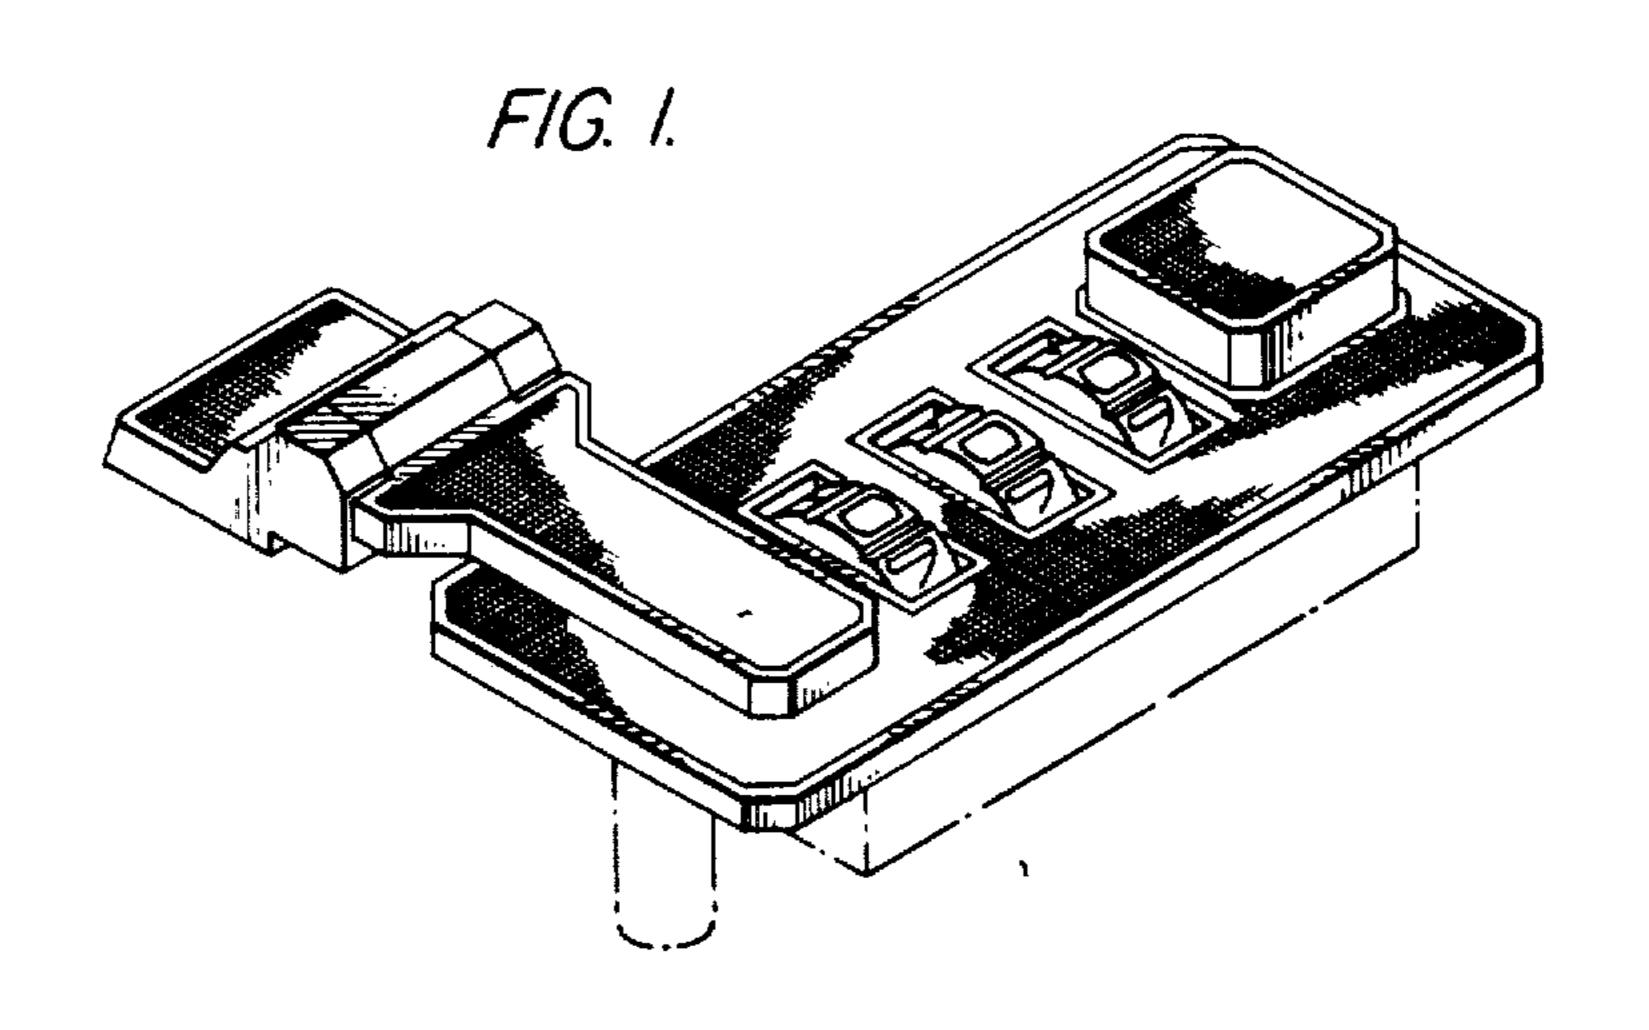

FIG. 3.

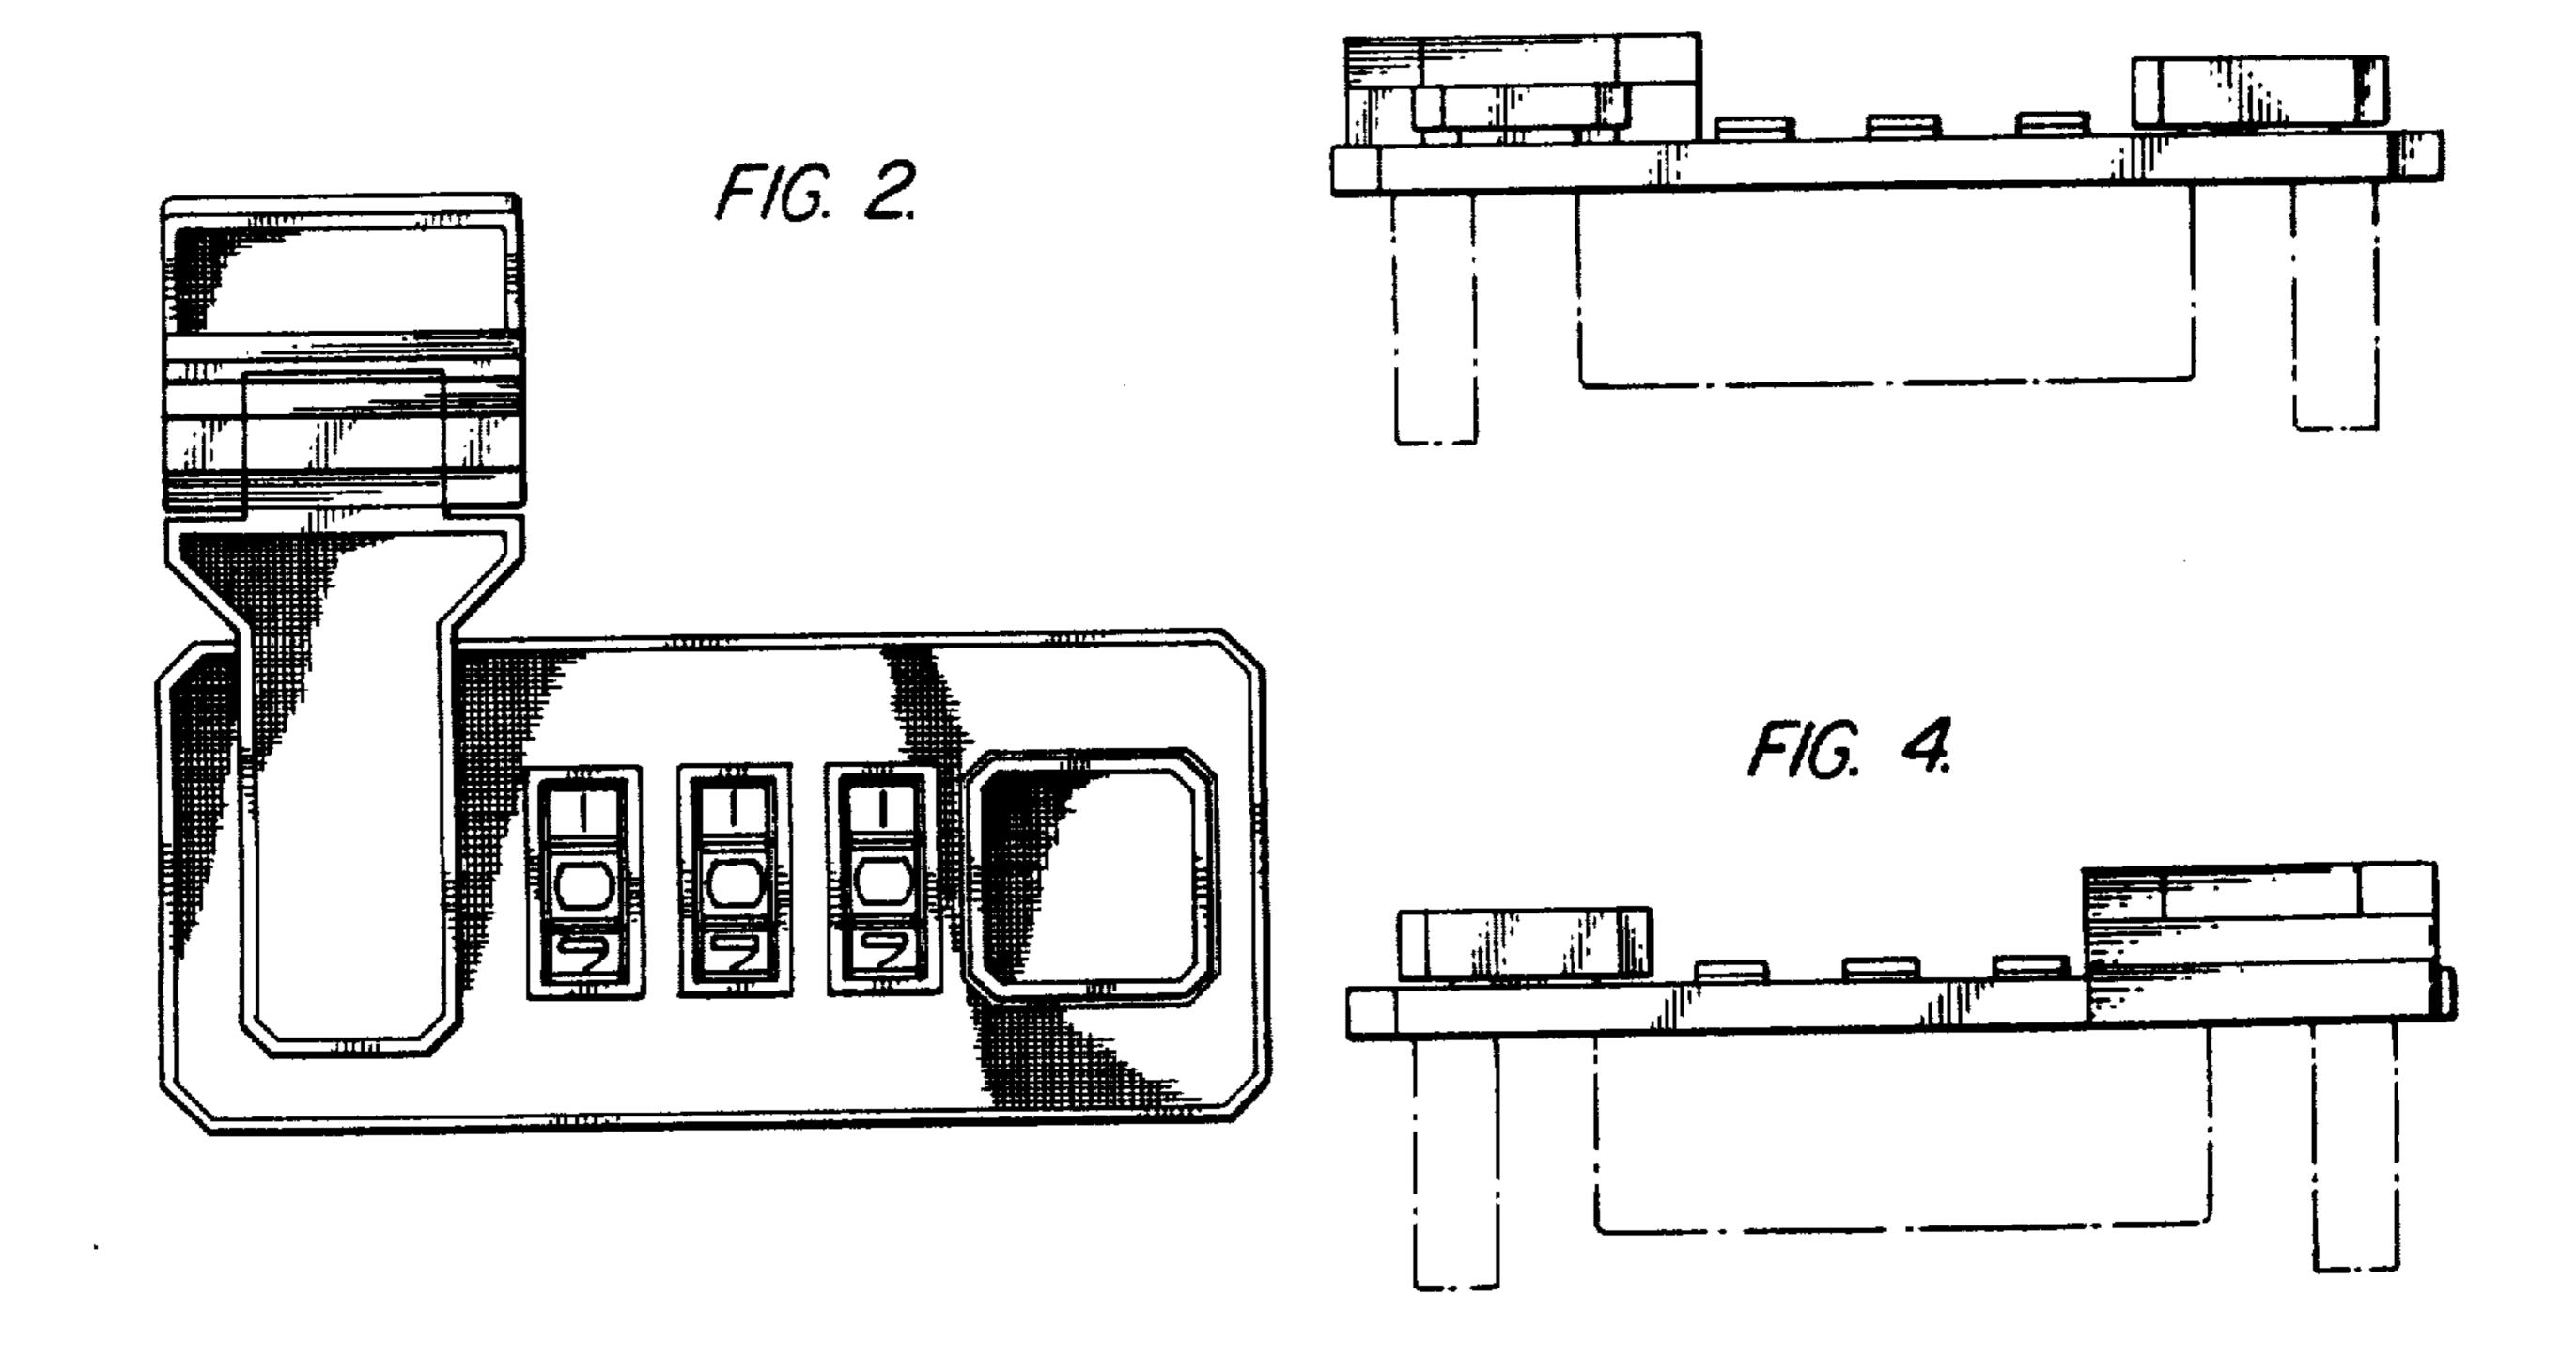

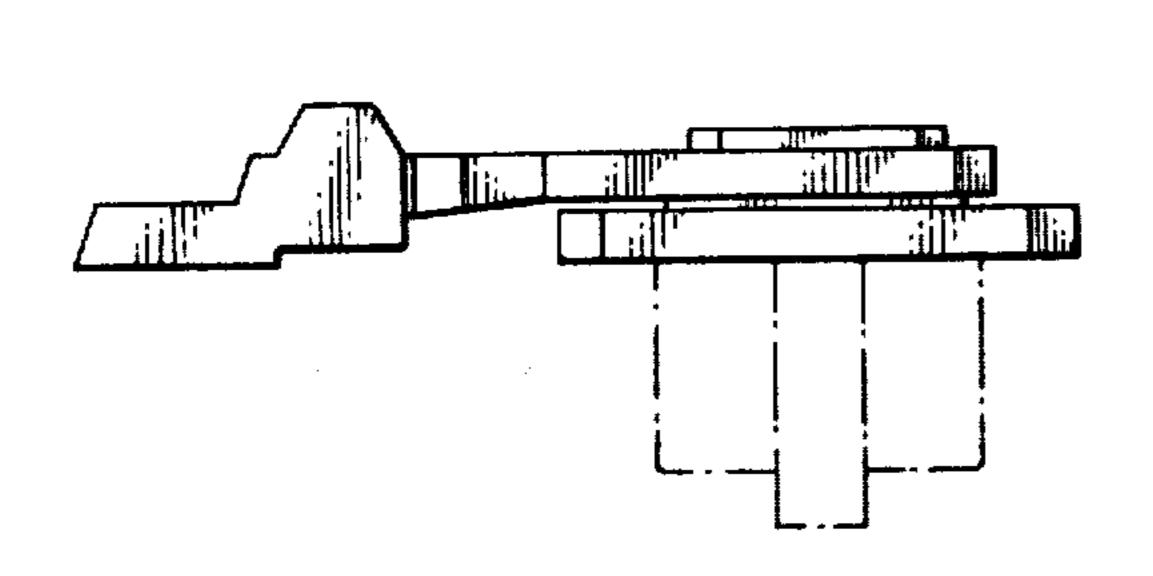

FIG. 5.

F/G. 6.
