Abstract

The invention disclosed here is a method of encoding serial numbers including "post-issuance" or "post-study information" on printed documents. A group of marks in the form of small dark dots or equivalent markings are repetitively placed across the line of the document. The placement and location of the markings follow a readable binary serial number. Interfering the markings with the printed matter on the document makes it difficult or impossible to remove the serial number encoded by the markings, and they will remain on the document after repeated photocopies of it are made.

Claims

1. A method of encoding serial numbers including "post-issuance" or "post-study information" on printed documents, comprising: placing a group of small dark dots or equivalent markings across the line of the document; and placing the markings to follow a readable binary serial number.

United States Patent [57] Patent No.: 5,436,974

November 1998 Date of Patent: 11/11/98

**(50) METHOD OF ENCODING
CONFIDENTIAL MARKINGS**

(75) Inventor: David J. Korman, Brown Point, Wash.

(72) Assignee: Invention Corporation, Brown Point, Wash.

(21) Appl. No.: 136,803

(22) Filed: Oct. 13, 1993

(57)
The invention disclosed here is a method of encoding serial numbers including "confidentiality" or "proprietary information" on printed documents. A group of marks in the form of small sized dots or equivalent markings are repetitively printed across the face of the document. The placement and location of the markings define a readable binary serial number. Interferring the markings with the printed matter on the document makes it difficult or impossible to remove the serial number encoded by the markings, and they will remain on the document after repeated photocopies of it are made.

ABSTRACT

The invention disclosed here is a method of encoding serial numbers indicating "confidentiality" or "proprietary information" on printed documents. A group of marks in the form of small short bars or equivalent markings are repetitively printed across the face of the document. The placement and location of the markings defines a readable binary serial number. Interrelating the markings with the printed matter on the document makes it difficult or impossible to remove the serial number encoded by the markings, and they will remain on the document after repeated photocopies of it are made.
