[57] CLAIM

The ornamental design for an adjustable health improvement device for modifying a daily behavior by reminding a person to take medication, as shown and described.

DESCRIPTION

1,649,814 11/1927 Lellis. 1,710,642 4/1929 Hammet . 2,099,906 11/1937 Reese et al. . 2,232,171 2/1941 Fleenor. 2,415,447 2/1947 Stanton . 2,417,874 3/1947 Kehl. 2,432,764 12/1947 Jenkins. 2,444,488 7/1948 Aschemeier. 2,450,337 9/1948 Hearst . 2,570,380 10/1951 Rosier. 2,579,695 12/1951 Milbrath. 2,608,294 8/1952 Ward. 2,956,851 10/1960 Merendino. 1/1966 Kipnis . 3,228,737 7/1970 Coker, Jr. . 3,521,936

FIG. 1 is a right perspective view of an adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of the present invention, shown with a toothbrush and a container in phantom lines;

FIG. 2 is a left perspective view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1;

FIG. 3 is a front elevational view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1, shown in an open position;

Des. 407,250 Page 2

FIG. 4 is a rear elevational view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1; FIG. 5 is a top plan view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1; FIG. 6 is a bottom plan view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1; FIG. 7 is a left side view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1; FIG. 8 is a right side view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1; FIG. 9 is a front elevational view of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1, shown in a closed position; FIG. 10 is a right perspective view of a first alternative embodiment of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 1; FIG. 11 is a left perspective view of the first embodiment of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 10; FIG. 12 is a top plan view of the first embodiment of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 10;

The left and right side views, the bottom, and front and rear elevational views of the first alternative embodiment of FIG. **10**, being similar to the embodiment shown in respective FIGS. **1–9**;

FIG. 13 is a bottom plan view of a second alternative embodiment of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 10;

FIG. 14 is a top plan view of the second alternative embodiment of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 13;

FIG. 15 is a front elevational view of the second alternative embodiment of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 13; and,

FIG. 16 is a rear elevational view of the second alternative embodiment of the adjustable health improvement device for modifying a daily behavior by reminding a person to take medication of FIG. 13.

The left and right side views of the second alternative embodiment shown in FIGS. 13–16, being similar to the embodiment shown in respective FIGS. 1–9.
