(57) **CLAIM**

The ornamental design for a body attachable elastic information display and personal identification band, as shown and described.

**DESCRIPTION**

FIG. 1 is a perspective view of a body attachable elastic information display and personal identification band showing my new design;

FIG. 2 is a top plan view, with the bottom plan view being a mirror image thereof;

FIG. 3 is a front elevational view thereof;

FIG. 4 is a left side elevational view thereof;

FIG. 5 is a right side elevational view with the left side being substantially a mirror image thereof;

FIG. 6 is a rear elevational view thereof; and,

FIG. 7 is an environmental view of the design as seen in FIG. 1.

The overall surface of the elastic band, other than the transparent surface overlay, and the border surrounding same, is of a soft, resilient fibrous material as can be understood by FIG. 6, for example. The transparent overlay shown by FIG. 1, is made of a flexible, tear-resistant, synthetic organic polymer material. The border strip which secures the transparent overlay is a flexible leather-like material. In FIG. 7, the broken line showing of a human hand and arm is for illustrative purposes only and forms no part of the claimed design.
