(57) **CLAIM**

An ornamental design for a teether bib, as shown and described.

DESCRIPTION

FIG. 1 is a front elevational view of a teether bib showing our new design, the rear being substantially the same. The unevenly broken sinuous lines are for illustrative purposes only and forming no part of this embodiment. The evenly broken lines shown along the inner edge of the teething corners in FIGS. 1, 2, 3 and 6 are understood to represent stitching.

FIG. 2 is a fragmentary perspective view thereof, showing an alternate embodiment of the design shown in FIG. 1;

FIG. 3 is a fragmentary elevational view of FIG. 2, shown rotated 90 degrees, the bib portion being removed for convenience of illustration;

FIG. 4 is a bottom plan view of FIG. 3;

FIG. 5 is a top plan view of FIG. 3; and,

FIG. 6 is a fragmentary perspective view showing a second embodiment of the design shown in FIG. 1.

The claimed design is directed to the appearance of a bib configured with 2 lower teething corners, which in some views, are shown partially disassembled, for the purpose of clarifying aspects of the assembled design, that are not apparent from the other views.
