(57) **CLAIM**

We claim the ornamental design for a disposable medical instrument for performing retropubic urethropexy, as shown and described.

DESCRIPTION

FIG. 1 is a top perspective view taken from the needle end of a single needle instrument with thumb pad extended and needle retracted.

FIG. 2 is a bottom perspective view taken from the needle end of a single needle instrument with thumb pad extended and needle retracted.

FIG. 3 is a rotated perspective view taken from the thumb pad end of a single needle instrument with the thumb pad extended and needle retracted.

FIG. 4 is a rotated perspective view taken from the thumb pad end of a single needle instrument with the thumb pad extended and needle retracted.

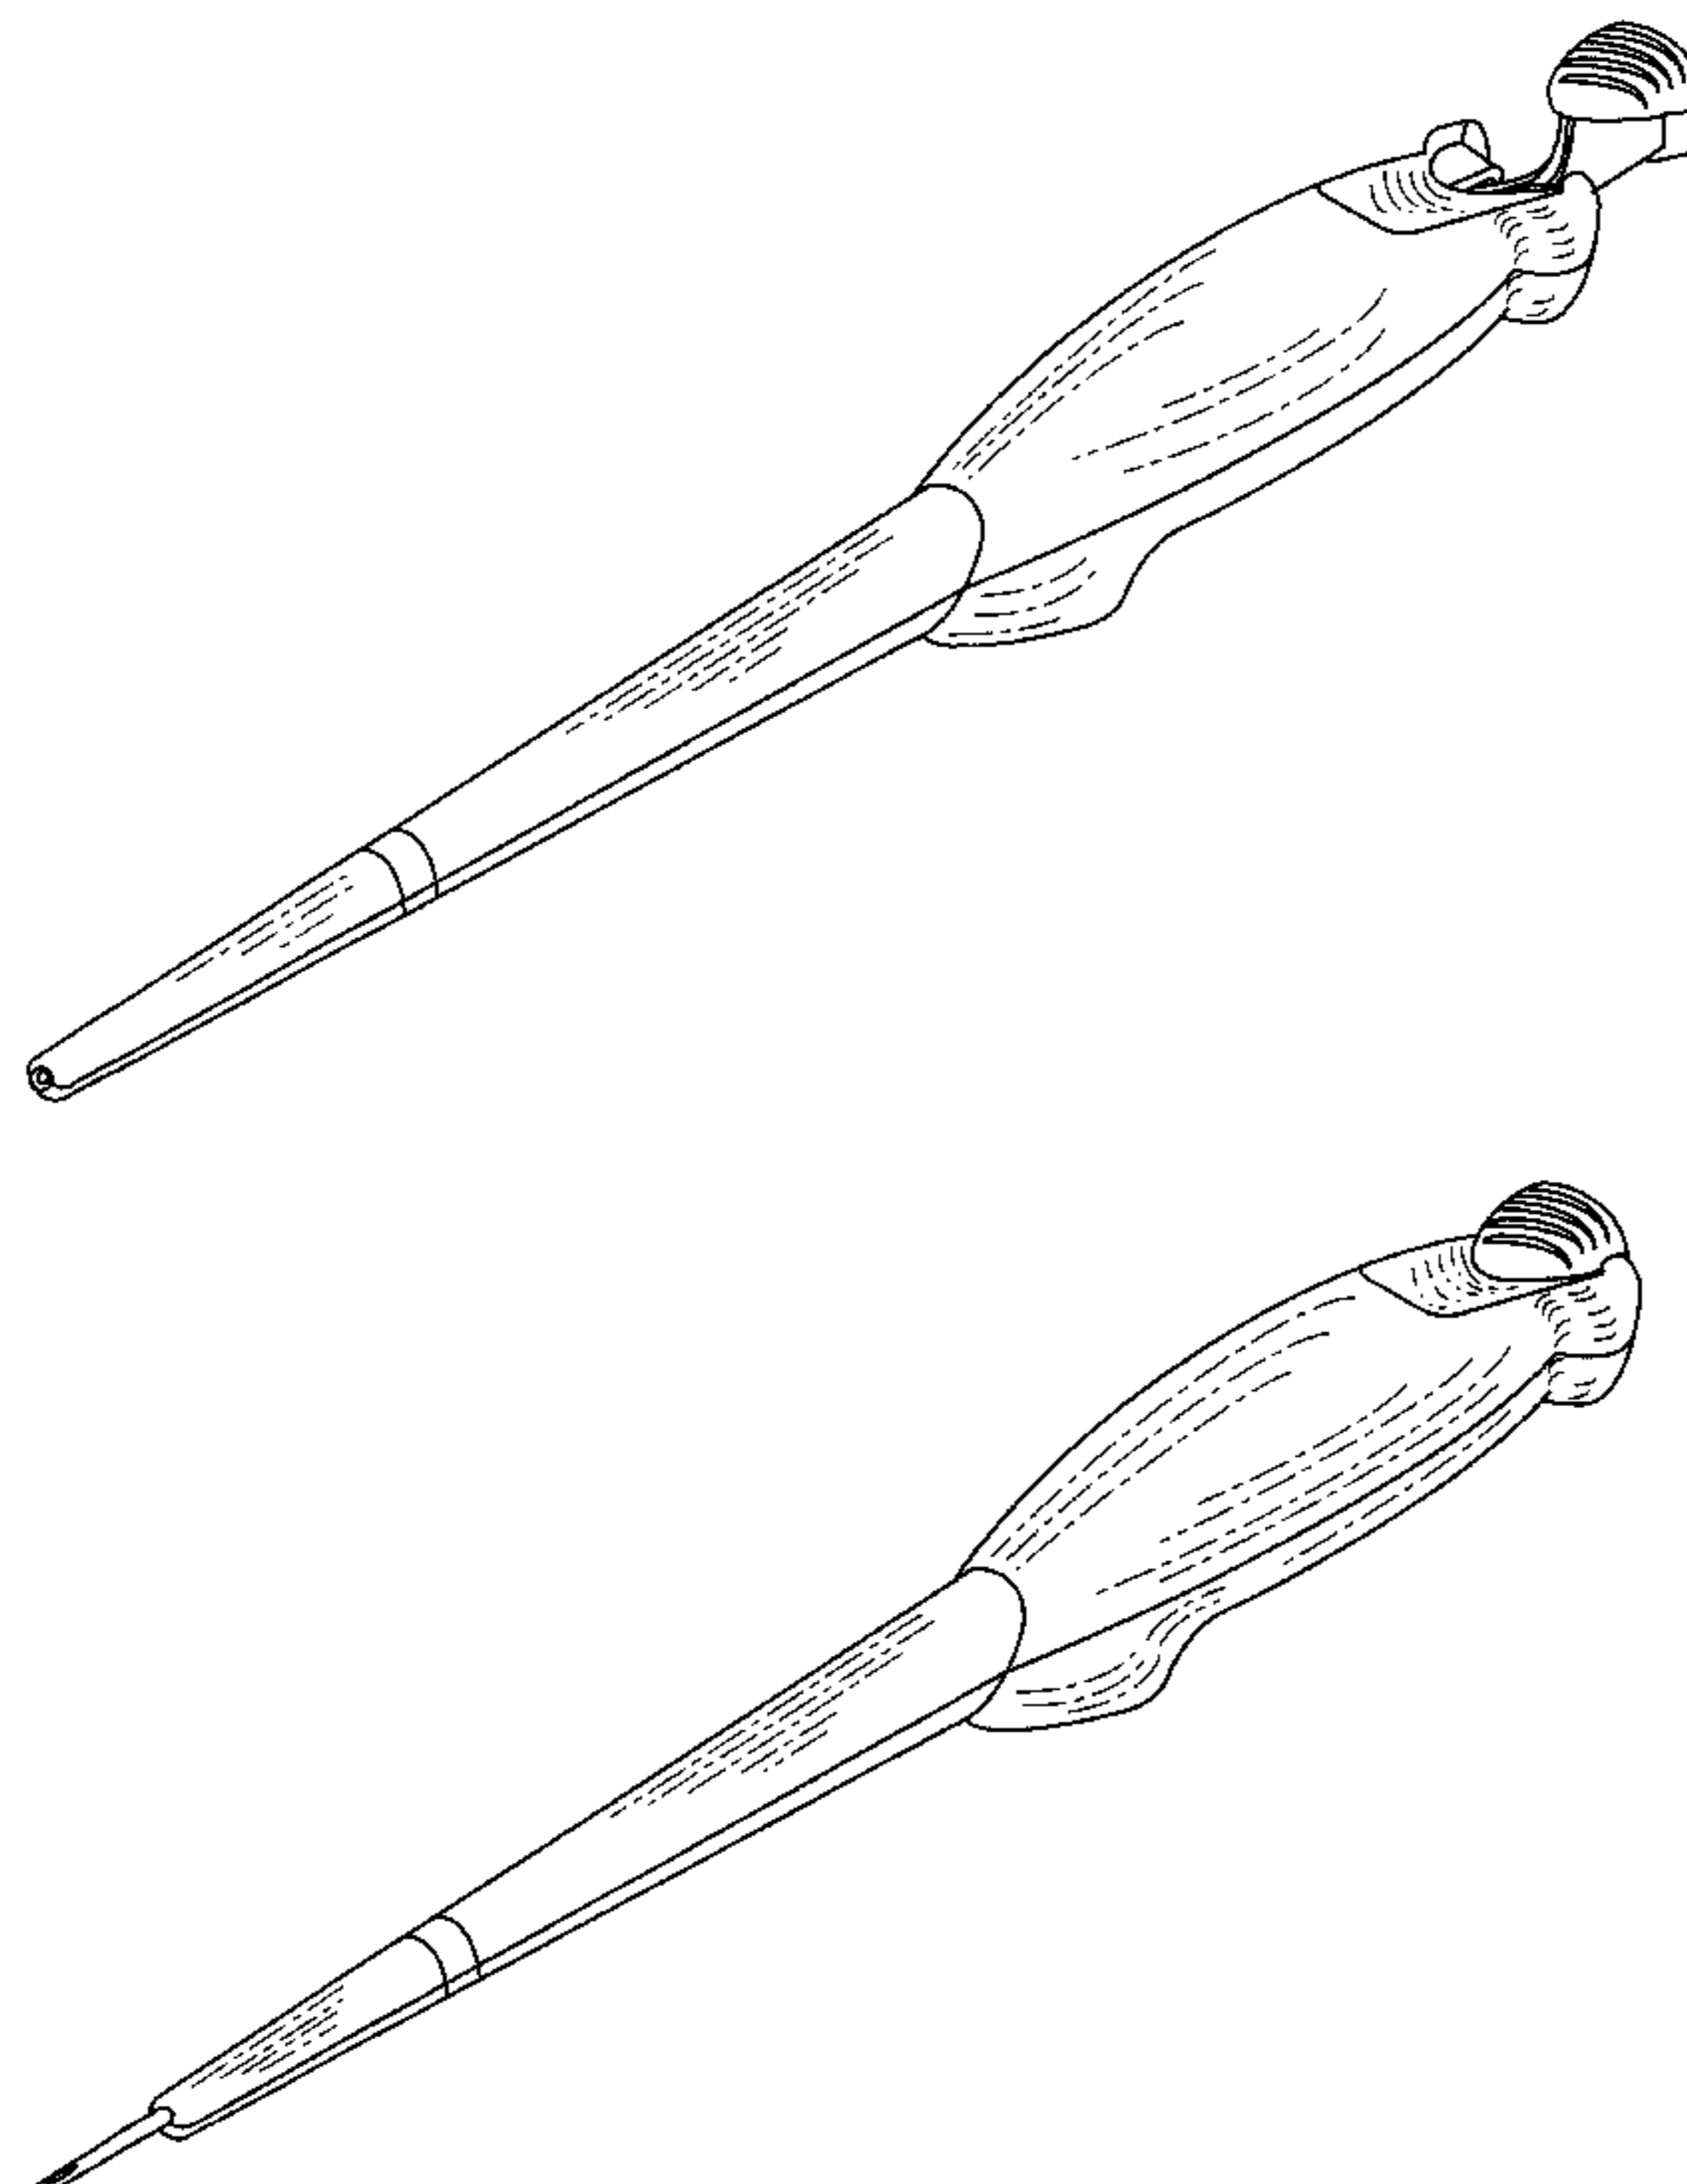

FIG. 5 is a top perspective view taken from the needle end of a single needle instrument with thumb pad depressed and needle extended.

FIG. 6 is a bottom perspective view taken from the needle end of a single needle instrument with the thumb pad depressed and the needle extended.

FIG. 7 is a rotated perspective view taken from the thumb pad end of a single needle instrument with the thumb pad depressed and the needle extended; and,

FIG. 8 is a rotated perspective view taken from the thumb pad end of a single needle instrument with the thumb pad depressed and the needle extended.
