(57) **CLAIM**

The ornamental design for the golf putter head, as shown and described.

The putter head is part of a golf club called a putter which consists of a head shaft and a grip. This invention is the head.

FIG. 1 is a top view;

FIG. 2 is a top perspective view;

FIG. 3 is a front view;

FIG. 4 is a bottom view;

FIG. 5 is a side view; and,

FIG. 6 is an inverted back view.

The object of my invention is to provide a putter head with long sighting lines. FIG. 1, a sighting line parallel to the face from the toe to the heel and other sighting line extends from the face of the putter head to the back of the putter head on a flat surface for a more accurate line up. The longer the sighting lines the easier it is for a golfer to line up with his target. FIG. 2 is a top elevation view. FIG. 3 is a front view showing the shape of the face and the depth of the sighting lines. FIG. 4 is a bottom view showing the shape with substantial weight directly behind the hitting area to produce inertial energy on the down stroke, a single runner on the bottom supports the putter head to keep the putter head parallel to the ground at address. The runner offers minimal resistance from grass while striking the ball. FIG. 5 is the side view showing the shape, length of the runner. FIG. 6 is the back view showing the shape, width and height of the runner and sighting grove.
