(57) **CLAIM**

The ornamental design for a double actuator for an electrical control device, as shown and described.

**DESCRIPTION**

FIG. 1 is a perspective view of a double actuator for an electrical control device embodying my new design showing the top in a diagonal position from above. The rear and right sides of the double actuator are symmetrical with the front and left sides, respectively, and the bottom of the front element forms no part of the claimed design; and, FIG. 2 is a view of the top side of the double actuator embodying my new design. As with FIG. 1, the sides of the double actuator are symmetrical.
