(57) **CLAIM**

The ornamental design for a personal weighing scale, as shown and described.

DESCRIPTION

FIG. 1 is a pictorial view taken from the top, front and right side of a first embodiment of the personal weighing scale embodying my design;

FIG. 2 is a plan view thereof, wherein the reflection lines shown on the bezel which appear underneath the display window of the bezel and the reflection lines which appear adjacent the upper periphery of the display window of the bezel form no part of the claimed design;

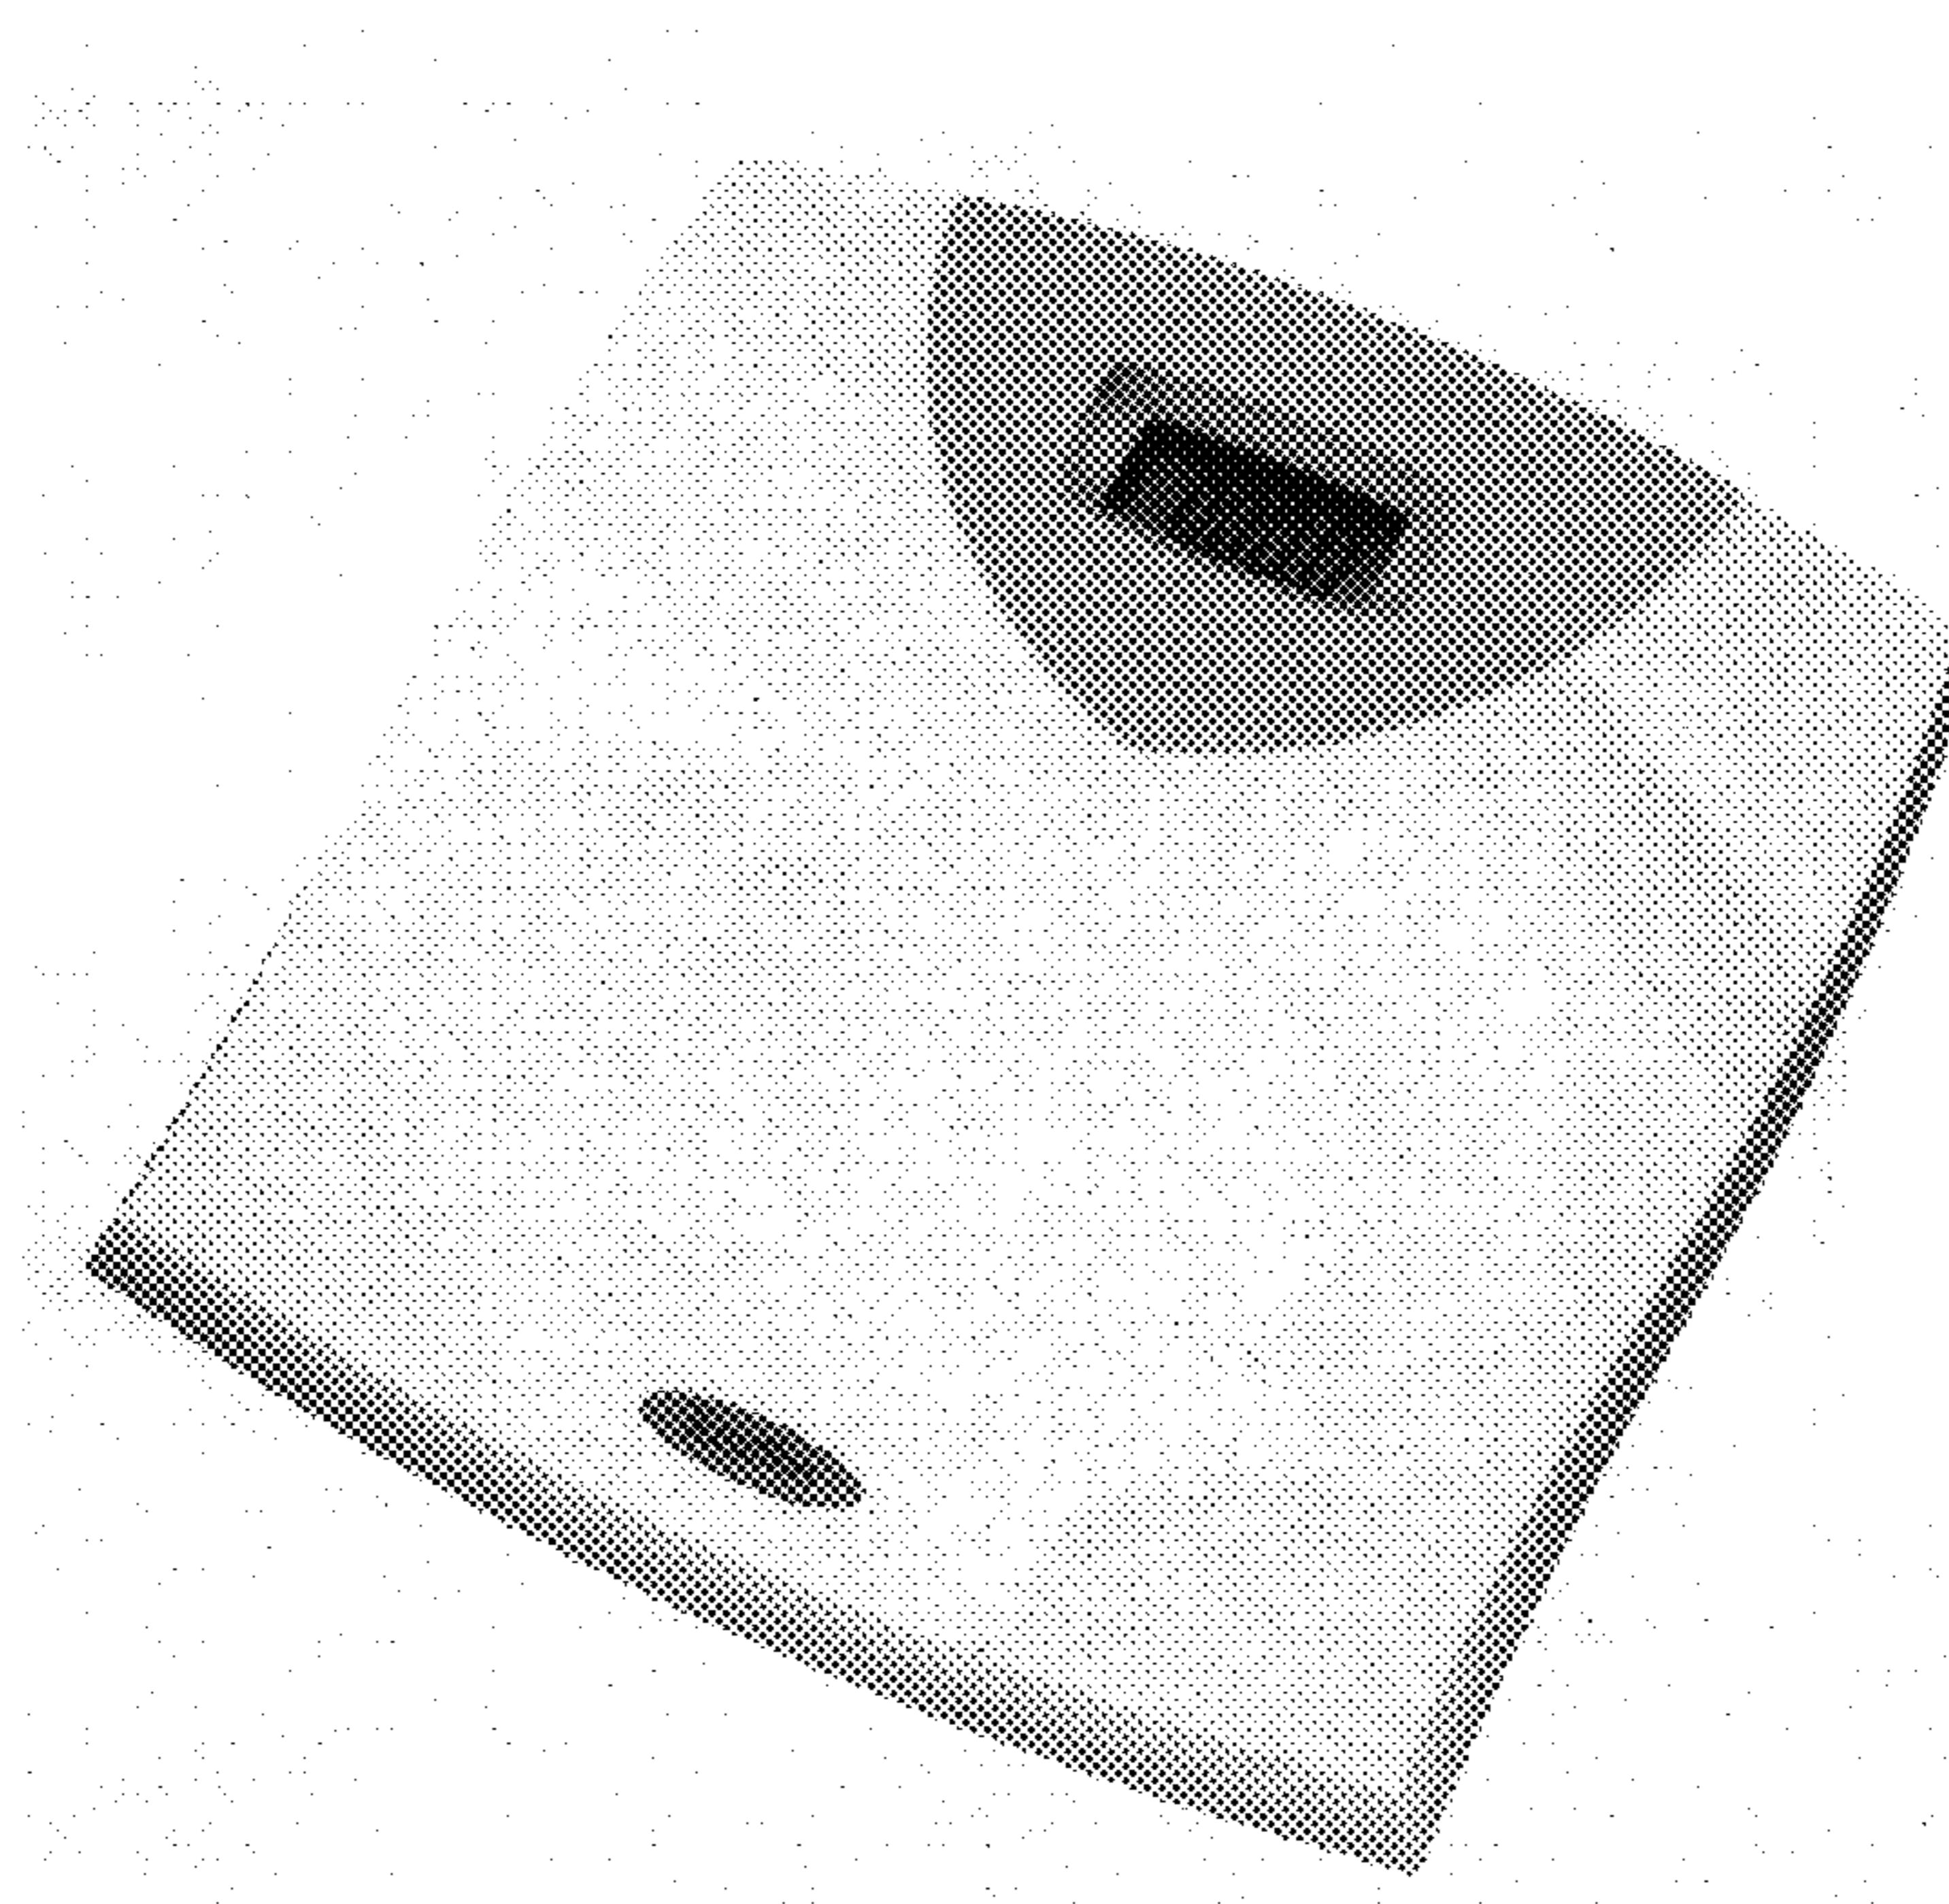

FIG. 3 is an enlarged right side view thereof, the left side view being a mirror image of the right side view;

FIG. 4 is an enlarged front view thereof;

FIG. 5 is an enlarged rear view thereof; and,

FIG. 6 is a pictorial view taken from the top, front and right side of a second embodiment of the invention, wherein the right and left side views and the front and rear views thereof are substantially the same as the first embodiment, and the plan view thereof is substantially the same as the first embodiment except for the appearance of the display window of the bezel wherein the digits appear.

It will be appreciated that the shading of the bezel in FIGS. 1-6 is intended to represent contrasting color which is darker or lighter than the adjacent surface of the weight receiving platform of the scale. Further, the following features are illustrated solely as environment and therefore form no part of the claimed design: the elliptical-shaped name plate positioned adjacent the front edge of the scale in FIGS. 1-4 and 6; the digits shown in the display window of the bezel in FIGS. 1 and 6; the bottom, floor-engaging portion of the scale FIGS. 3-5; and the two semicircles and the two vertical lines respectively disposed outwardly of these semicircles in FIG. 5.
