(57) **CLAIM**

The ornamental design for the hair color sample band, as shown and described.

**DESCRIPTION**

The present design relates to an accessory device adapted to assist hair stylists to more accurately display the result of specific hair colors prior to actually coloring a person's hair, by means of releasably attaching a head band to which interchangeable hair color samples are attached, to said person's frontal head area. This hair band-like accessory encompasses the use of artificially colored hair samples releasable attached to a c-shaped ring or head band which, when applied top one's frontal portion of the head, simulates the result potentially accomplished by later coloring the person's hair.

FIG. 1 is a rear elevation view of the hair color sample band of the present design;

FIG. 2 is a rear perspective view from above showing the design in use on the wearer's head together with a partial mirror image of the front of the design;

FIG. 3 is an exploded rear elevation view illustrating the interchangeability of hair samples on the c-shaped band of the present design; and,

FIG. 4 is a front elevation view of the hair color sample band of the present design.

The broken line showing of the human form and mirror is for illustrative purposes only and forms no part of the claimed design.
