(57) **CLAIM**

The ornamental design for a integral actuator with folded-back arms, as shown and described.

**DESCRIPTION**

The present invention is characterized by an ornamental design for an integral actuator with folded-back arms for moving parts of a clamp, valve, or motor with respect to one another in response to electrical activation of a piezoelectric actuator.

FIG. 1 is a perspective view of the ornamental design according to the present invention,

FIG. 2 is a side elevational view of the ornamental design according to the present invention, where the opposite side elevational view is a mirror image thereof,

FIG. 3 is a plan view of the ornamental design according to the present invention, where the bottom view is identical thereto,

FIG. 4 is a right hand elevational view of the ornamental design according to the present invention as shown in FIG. 2; and,

FIG. 5 is a left hand elevational view of the ornamental design according to the present invention.

The broken lines which define the bounds of the claimed design form no part thereof.

The broken line showing of the environment is for illustrative purpose only and forms no part of the claimed design.
