DESCRIPTION

FIG. 1 is a top view of the preferred embodiment of the herringbone braiding device of this invention. The bottom view is identical to the top view. As shown in FIG. 1, the braiding device includes two cavities with a wavy element extending into each cavity.

FIG. 2 is a front elevational view of the preferred embodiment of the herringbone braiding device of this invention. The rear elevational view is a mirror image of the front; and, FIG. 3 is a left side elevational view of the preferred embodiment of the herringbone braiding device of this invention. The right side elevational view is a mirror image of the left.
