FIG. 6 is a perspective view of the gift bag of FIG. 1, in a folded, collapsed condition, showing the front and right sides thereof, and showing the new design; and, FIG. 7 is a right side elevational view of the folded, collapsed gift bag of FIG. 6, where the right side is essentially the mirror image of the left side in the folded, collapsed condition.

The broken lines in FIGS. 1 through 7 are for illustrative purposes only and form no part of the claimed design. Accordingly, the flexible handles of the gift bag and eyelets for receiving the handles are shown in the drawings as dashed lines and form no part of the inventive design. The napped filamentary exterior surface has a soft pile that resembles thick artificial animal fur. The characteristic feature of the design resides in the appearance of the gift bag as shown, including the appearance of the napped filamentary material uniformly covering the entire exterior surface of the gift bag and extending over the top edge to cover an upper portion of the interior surface of the gift bag.
