(57) **CLAIM**

I claim the ornamental design for holder for hair dryer and accessories, as shown and described.

DESCRIPTION

FIG. 1 is a front elevational view of the holder for hair dryer and accessories design;

FIG. 2 is a side elevational view of the holder for hair dryer and accessories design; and,

FIG. 3 is a bottom plan view of the holder for hair dryer and accessories.

A rack-type holder is provided with suspending hooks enabling it to be attached to a drawer or shelf. The holder is provided with a series of openings of varying sizes, which conveniently support a hair dryer in a larger of such openings, and additional accessories relating to the use of the dryer in the further openings. Thus a “station” is provided for the hair dryer and accessories, which eliminates the clutter and unsightliness associated with the use and storage of these items by a user.

The holder can be formed of a round cross-section high quality (e.g. stainless steel) wire or of a molded or otherwise formed plastic, with the various holders being circular loops.
