(57) **CLAIM**

The ornamental design for a paper product, as shown and described.

DESCRIPTION

FIG. 1 is a top plan view of a first embodiment of a paper product illustrating the claimed design.

FIG. 2 is a top plan view of a second embodiment of the paper product in which the design of the first embodiment is embossed.

FIG. 3 is an enlarged detail view of the circled portion 3 of FIG. 2.

FIG. 4 is a cross-sectional view of the paper product of FIG. 2 taken along the line 4—4 shown in FIG. 3.

FIG. 5 is a cross-sectional view of the paper product of FIG. 2 taken along the line 5—5 shown in FIG. 3.

FIG. 6 is a cross-sectional view of the paper product of FIG. 2 taken along the line 6—6 shown in FIG. 3.

FIG. 7 is a cross-sectional view of the paper product of FIG. 2 taken along the line 7—7 shown in FIG. 3.

FIG. 8 is a cross-sectional view of the paper product of FIG. 2 taken along the line 8—8 shown in FIG. 3.

FIG. 9 is a cross-sectional view of the paper product of FIG. 2 taken along the line 9—9 shown in FIG. 3; and,

FIG. 10 is a top plan view illustrating a repeat unit of the claimed design of both the first embodiment of the paper product shown in FIG. 1 and the second embodiment of the paper product shown in FIG. 2, in which the design of the first embodiment is embossed.

The broken lines shown around the borders of FIGS. 1, 2, and 10 depict boundaries of the two embodiments of the paper product and the repeat unit for both embodiments. The broken line boundaries indicate that the paper product has indeterminate length and width, and that the claimed design repeats uniformly throughout the length and width of the paper product. The broken lines form no part of the claimed design.

FIGS. 1, 2, and 10 illustrate one example of the orientation of the new design. It should be appreciated that the new design may be rotated at any degree of orientation.

FIGS. 4 through 9 illustrate side views of various emboss elements of the embossed paper product of FIG. 2 and, in particular, a relative height of each emboss element and relative spacings between adjacent emboss elements. It should be appreciated that the heights of and spacings between the emboss elements shown in FIGS. 4 through 9 illustrate only one possible embodiment that may form the pattern of FIG. 2, and that the heights of and spacings between the emboss elements may comprise a variety of heights and spacings to form the pattern of FIG. 2.
