(57) **CLAIM**

The ornamental design for an object for the control of a remote controlled toy through attitudinal orientation of the object, as shown and described.

DESCRIPTION

FIG. 1 is a plan view of an object for the control of a remote controlled toy through attitudinal orientation of the object. FIG. 2 is a right side view of the object for the control of a remote controlled toy through attitudinal orientation of the object of FIG. 1, the other side view being a mirror image of the side view of FIG. 2.

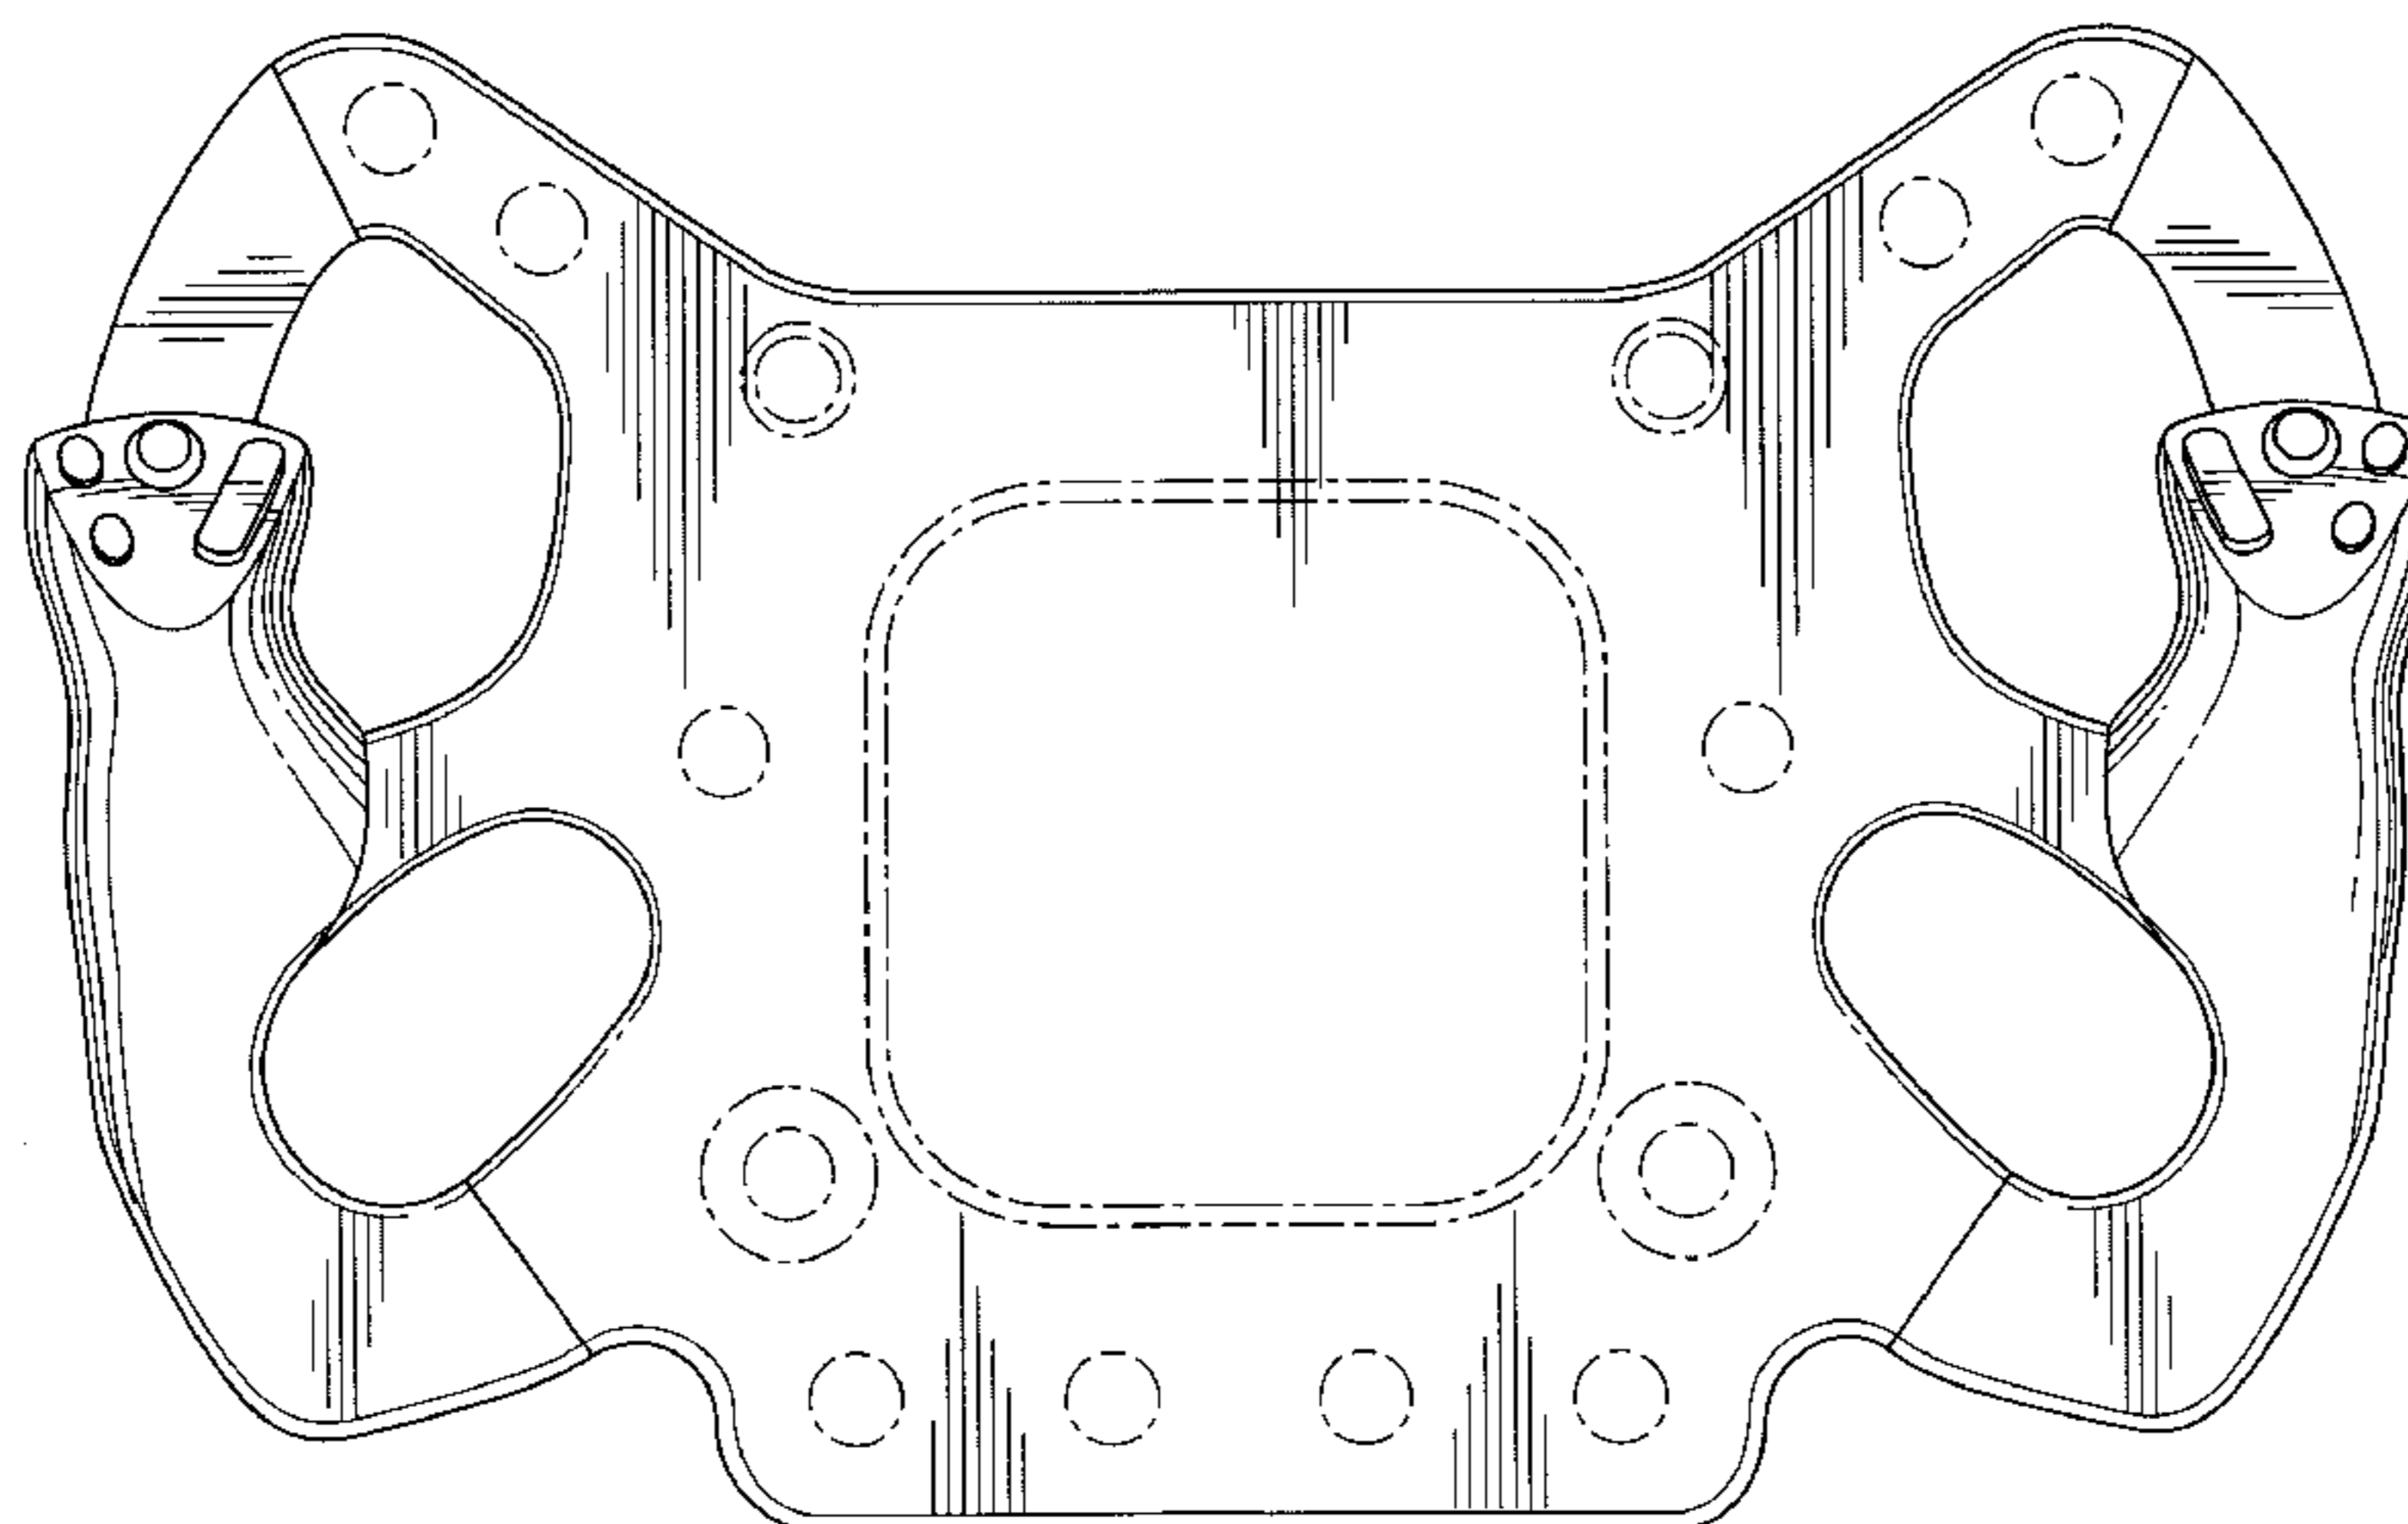

FIG. 3 is a top view of the object for the control of a remote controlled toy through attitudinal orientation of the object of FIG. 1; and,

FIG. 4 is a bottom view of the object for the control of a remote controlled toy through attitudinal orientation of the object of FIG. 1.

The bottom of the object for the control of a remote controlled toy through attitudinal orientation of the object does not form any part of the design.

The broken lines shown in FIGS. 1–4 are for illustrative purposes only and form no part of the claimed design.
