(57) **CLAIM**

The ornamental design for a socket wrench, as shown and described.

**DESCRIPTION**

The quality of the present invention is the metal and synthetic resins and it relates to use when the bolt to fix the tire wheel of a vehicle into the hub is fastened or loosened, and especially, it can be possible to obtain more great power than only a gear when the present invention that is used by the gear attaching the assistant gear is used to the tire.

FIG. 1 shows a perspective view of a preferred embodiment of the present device;

FIG. 2 shows a front view of a preferred embodiment of the present device;

FIG. 3 shows a rear view of a preferred embodiment of the present device;

FIG. 4 shows a left side view of a preferred embodiment of the present device;

FIG. 5 shows a right side view of a preferred embodiment of the present device;

FIG. 6 shows a plan view of a preferred embodiment of the present device;

FIG. 7 shows a bottom view of a preferred embodiment of the present device; and,

FIG. 8 shows a reference view showing a state using the present device to the tire.

The broken lines shown in FIG. 8 are for illustrative purposes only and form no part of the claimed design.
