(57) **CLAIM**

The ornamental design for a signal plug handle, as shown and described.

DESCRIPTION

FIG. 1 is a top plan view illustrating the top side of a first embodiment of the inventive handle, with a transparent or translucent circular tab, the bottom plan view being identical;

FIG. 2 is a left side elevational view of the handle of FIG. 1, the opposite right side view being a mirror image thereof; FIG. 3 is a front view of the handle of FIG. 2;

FIG. 4 is a rear view of the handle of FIG. 2;

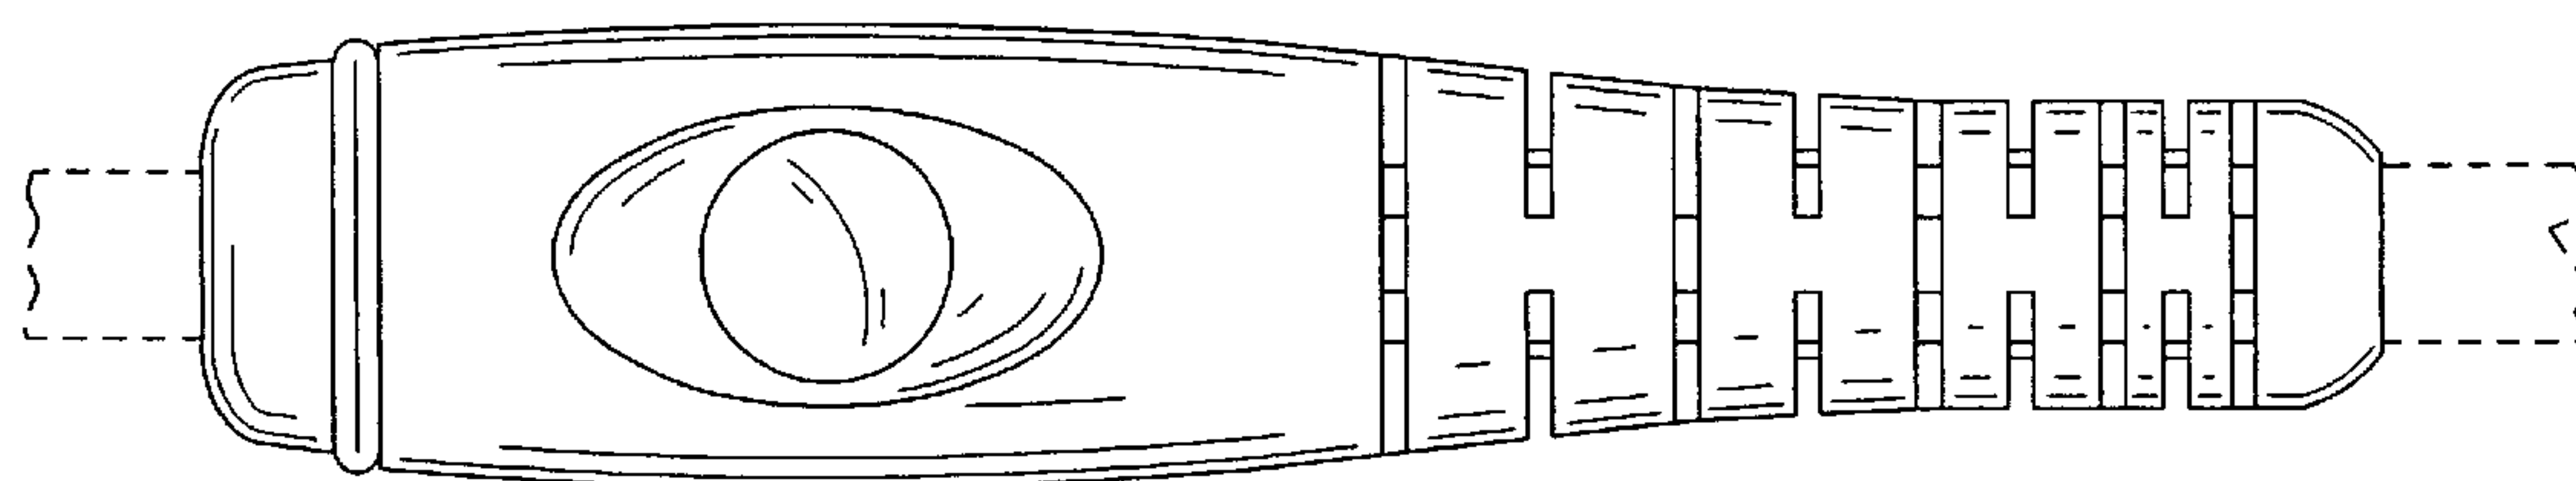

FIG. 5 is a top plan view illustrating the top side of a second embodiment of the inventive handle, with an opaque circular tab, the bottom plan view being identical;

FIG. 6 is a left side elevational view of the handle of FIG. 5, the opposite right side view being a mirror image thereof; FIG. 7 is a front view of the handle of FIG. 6; and,

FIG. 8 is a rear view of the handle of FIG. 6;

The figures show a broken-off portion of a connector plug at the handle front end and a broken-off portion of a cable at the handle rear end in broken lines. Those portions of the design shown in broken lines are for illustrative purposes only and do not form part of the claimed design. Also, the front and rear views are slightly canted relative to the handle axis, to improve the clarity of the views of the invention, but the inventive design is symmetric about a central axis.
