FIG. 1 is a perspective view illustrating the ornamental design according to the present invention with non-essential elements shown in phantom;  
 FIG. 2 is a front side elevational view of the ornamental design according to the present invention where non-essential elements are shown in phantom;  
 FIG. 3 is a plan view of the ornamental design where non-essential elements are shown in phantom;  
 FIG. 4 is a back side elevational view of the ornamental design according to the present invention as shown in FIG. 2;  
 FIG. 5 is a left hand view of the ornamental design according to the present invention as shown in FIG. 2; and,  
 FIG. 6 is a right hand view of the ornamental design according to the present invention as shown in FIG. 2 where non-essential elements are shown in phantom.

The present design is characterized by an ornamental design for the integral actuator with folded back arms and enlarged anvil for moving associated elements of a clamp, valve, or motor, with respect to one another using a piezoelectric actuator.
