(57) **CLAIM**

The ornamental design for an adjustable cladding assembly, as shown and described.

DESCRIPTION

FIG. **1** is a front and right side perspective view of an adjustable cladding assembly showing my new design, the rear and left side being identical thereto. The adjustable cladding assembly is indefinite in length; the broken lines are for illustrative purposes only and form no part of the claimed design;
FIG. **2** is a top perspective view thereof, the bottom being a mirror image thereof;
FIG. **3** is a perspective view thereof showing an alternate adjusted position;
FIG. **4** is a top plan view thereof showing an alternate adjusted position;
FIG. **5** is a top plan view of the adjustable cladding assembly showing the upper left corner component in FIG. **4**;
FIG. **6** is an elevation view of the long segment shown in FIG. **5**, viewing an exterior side of the long segment;
FIG. **7** is an elevation view of the short segment shown in FIG. **5**, viewing an exterior side of the short segment;
FIG. **8** is an elevation view of the long segment shown in FIG. **5**, viewing an interior side of the long segment; and,
FIG. **9** is an elevation view of the short segment shown in FIG. **5**, viewing an interior side of the short segment.
The laterally adjustable components of the adjustable cladding assembly are illustrated in example overlapping positions around posts, and the length of overlap between components may be adjusted to any desired arrangement in accordance with the present design, with each face on the cladding assembly maintaining a symmetrical design regardless of the length of overlap between components.
