(57)**CLAIM**

The ornamental design for a set of components for a vernier adjustable gear having an unequal number of holes in adjoining parts, as shown and described herein.

DESCRIPTION

FIG. 1 is an exploded perspective view of a vernier adjustable timing gears having an unequal number of holes in adjoining parts showing my new design;

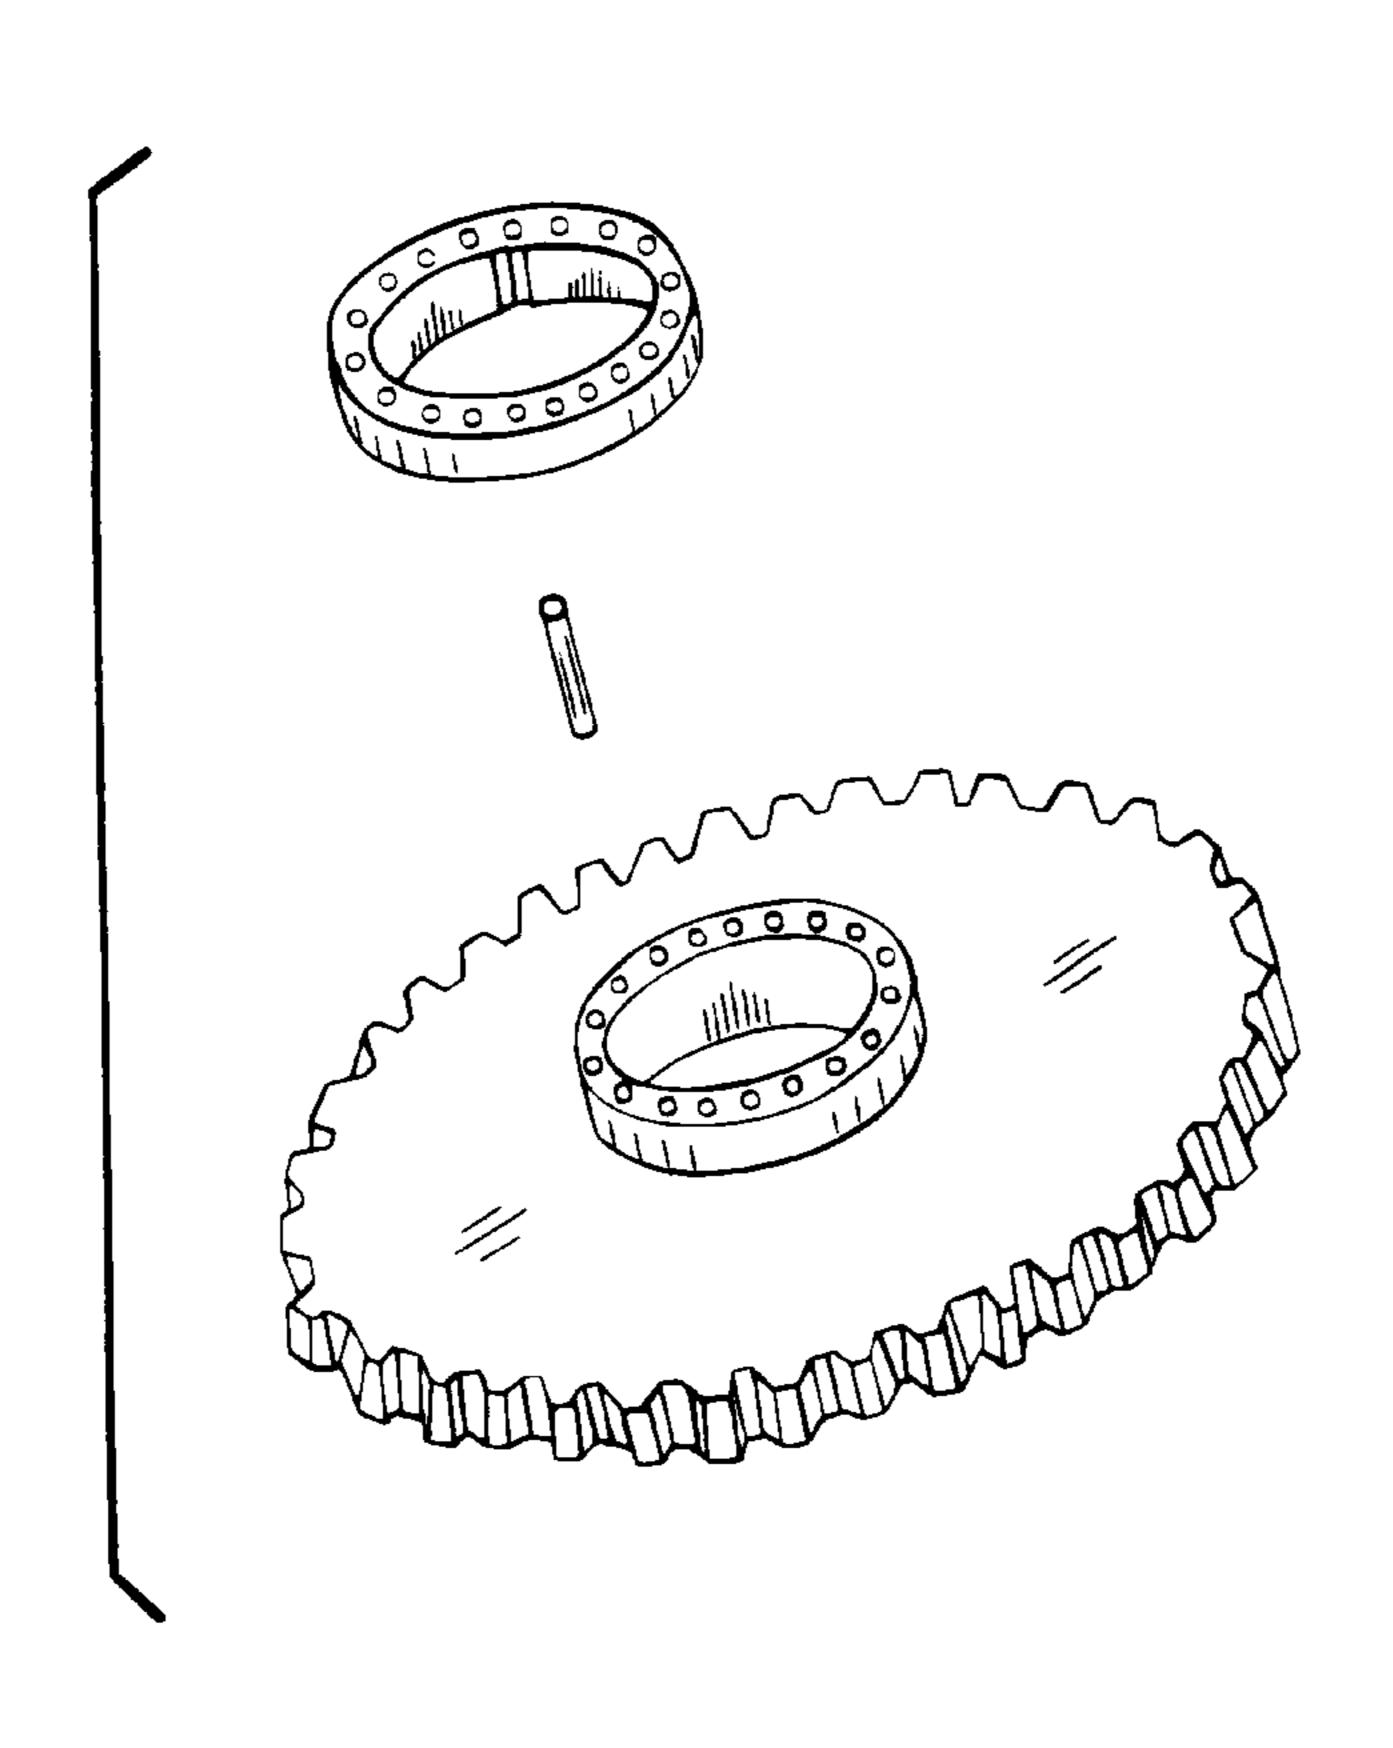

FIG. 2 is a top view of the drive member shown in FIG. 1, the bottom view is identical;

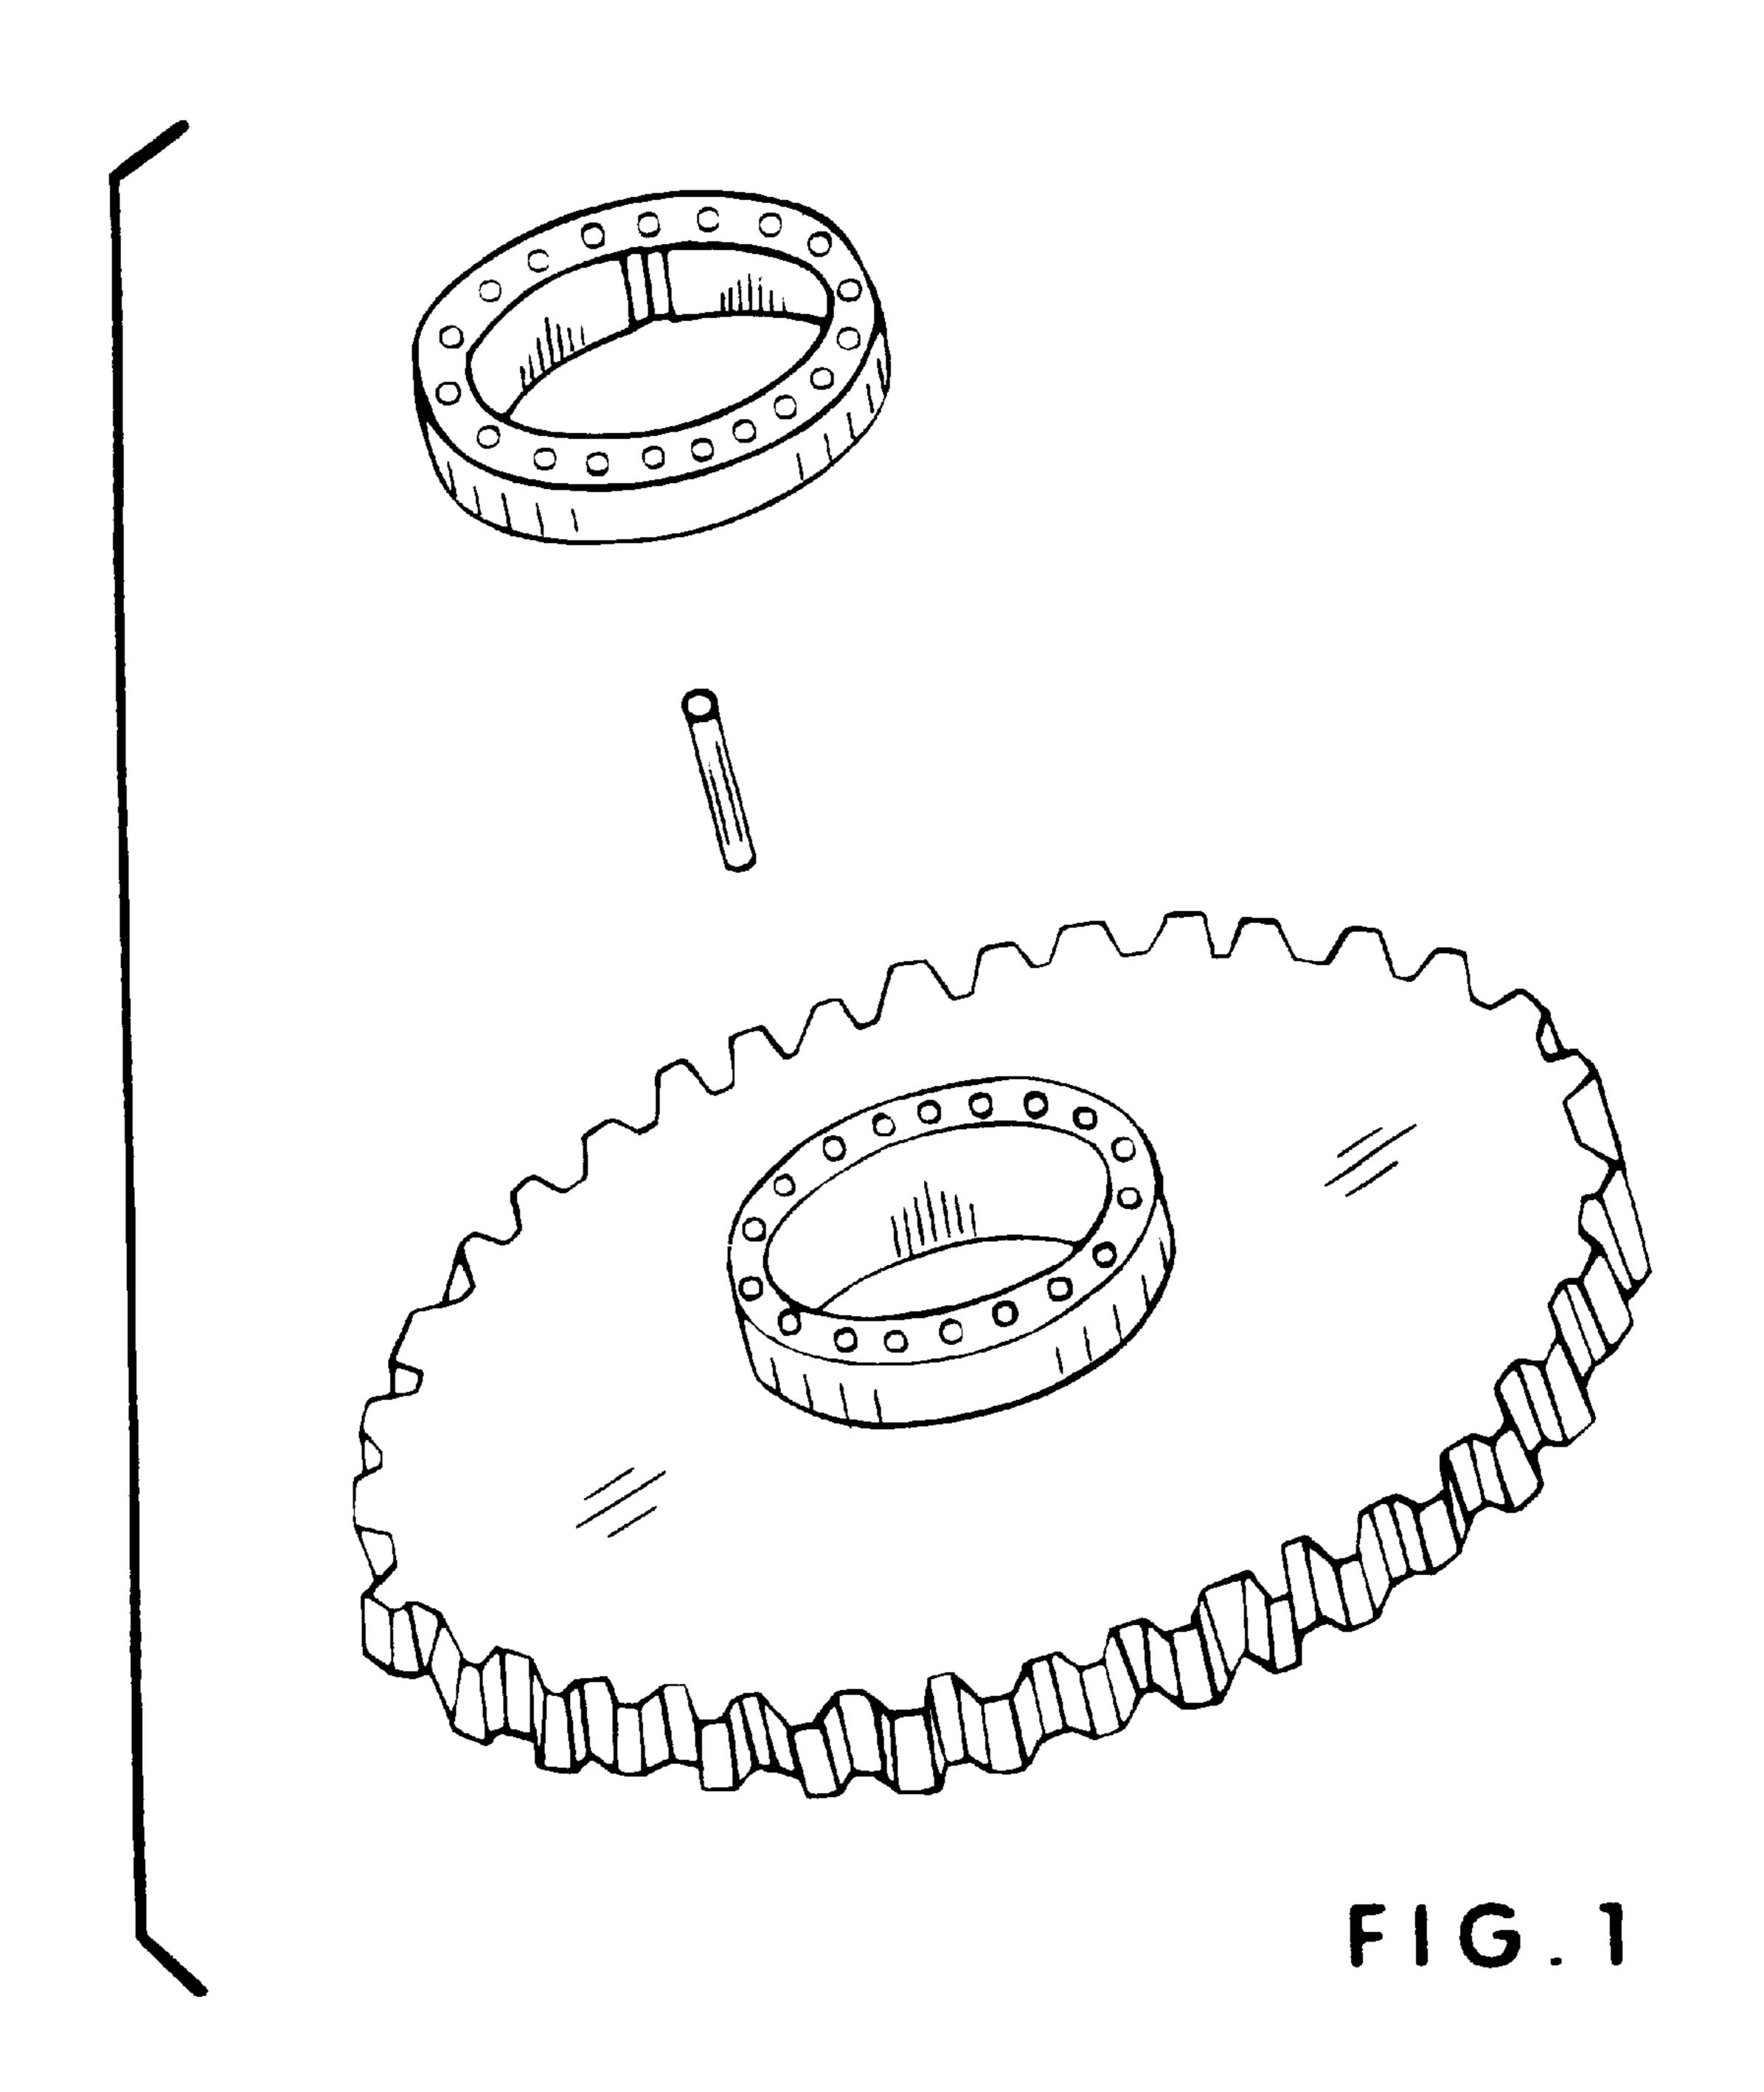

FIG. 3 is a side view of the drive member shown in FIG. 1, the other side is Is identical; and,

FIG. 4 is a side view of the pin shown in FIG. 1 between the other two present invention parts, the other side of the pin is identical.

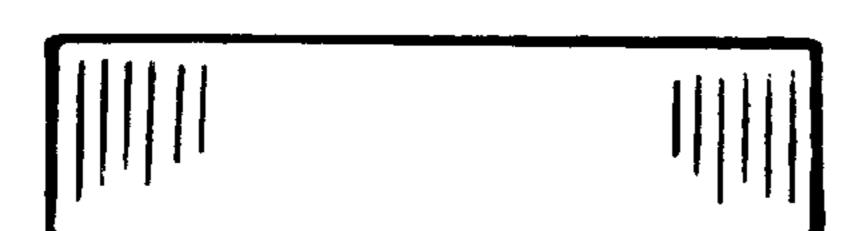

The top and bottom views of the pin and the drive member of the present invention shown ir FIGS. 1–4 are identical. Also the pin and the drive member when viewed from the left side, right side, front and back would have an identical appearance. The claimed design is directed to the collective appearance of the components shown in FIG. 1. Two of the components are shown separately in FIGS. 2, 3 and 4 for the purpose of showing aspects of the design that are not apparent in FIG. 1.
