(57) **CLAIM**

The ornamental design for a ribbon spinner blade for lures, as shown and described.

DESCRIPTION

A ribbon spinner blade for lures consists of a body portion in the shape of an “awareness” ribbon. The body portion has an attachment aperture at the larger end; the body of the lure ends in two “ribbon” tails that are bent opposite directions, whereby the smoothness of the spin is determined as the blade passes through the water, thus attracting fish.

FIG. 1 is a front view of the ribbon spinner blade for lures showing my new design;

FIG. 2 is a cross-sectional view shown along line 2—2 of FIG. 1; and,

FIG. 3 is another front view, with the spinner blade shown in use with a spinner bait.

The broken line showing of environment in the drawings is for illustrative purposes only and forms no part of the claimed design.
