(57) **CLAIM**

The ornamental design for a vehicle headlight, as shown and described.

DESCRIPTION

FIG. 1 is a front elevational view of a right vehicle headlight (as viewed from the front of the vehicle), the outer lens having been rendered transparent using the Computer Aided Design tools to better illustrate the decorative surfaces visible through the lens both with the lamp is illuminated and when the lamp is off. Only the right vehicle headlight is illustrated (the left vehicle headlight is a mirror of the right and is not illustrated but nonetheless covered by this patent);

FIG. 2 is a right side elevational view of the vehicle headlight;

FIG. 3 is a left side elevational view of the vehicle headlight;

FIG. 4 is a top down plan view of the vehicle headlight; and,

FIG. 5 is bottom up plan view of the vehicle headlight.

The vehicle headlight is styled independently of adjacent vehicle panels. To the extent that any feature lines are illustrated, they are intended to illustrate the crest and valley of the feature and are not necessarily sharp bends in the part. Shading is used to illustrate the curvature of the part and not color. Areas shown in or sounded by broken lines are not claimed. The surface normally visible when the vehicle headlight is attached to a vehicle is called the “Class A” surface is claimed. The surface not normally visible when the vehicle headlight is attached to a vehicle is called the “Class B” surface and is not claimed. Any functional features of the vehicle headlight are not claimed. Views are orthogonal projections unless otherwise noted. The various views are not necessarily to scale in order to better illustrate the design. The drawings were generated using Computer Aided Design tools. Highlights and shading were added to the drawings to better illustrate the three-dimensional features of the part.
