A visually appealing back scrub brush comprising of a telescopic extendable handle, to make it compactable for travel purposes, and a button which can be pressed to automatically produce a soapy lather in the brush. The ornamental design is appealing to young children as well as adults. In one embodiment, the brush comprises of a light-weight plastic bath brush that features a 2" thick and 12" long telescopic handle, which enables a user to easily store or pack the brush until he is ready to use it. An individual can simply extend the handle to a desired length by turning the handle at either of the two threaded locking sections to release the lock and allow the handle to telescopically extend. The handle has a self-lathering pad attached to the top end of the brush and a button located on the end of the handle to be used to activate the suds pad. The handle also features a hook located at the end tip of the handle for ease in hanging, or alternately, a suction cup on the back side of the handle.
