FIG. 1 is a reduced scale top, front perspective view of an artificial horse tail showing my new design and operatively supported on the end of a horse's braided tail, shown in broken lines.

FIG. 2 is a top, rear perspective view, without the broken line showing of environment and on a slightly enlarged scale, as viewed from the left rear in FIG. 1.

FIG. 3 is a side elevational view as viewed from the front right in FIG. 2, the opposite side elevational view being a mirror image.

FIG. 4 is an end elevational view as viewed from the right in FIG. 3, the opposite end elevational view being a mirror image.

FIG. 5 is a top, rear perspective view, similar to FIG. 2, of a second embodiment of the artificial horse tail of FIG. 1, the only difference being the configuration of the attachment ring member, it being understood that all other surfaces are the same as those of the first embodiment, the opposite, top front perspective view being a mirror image.

FIG. 6 is an end elevational view as viewed from the front right in FIG. 5.

FIG. 7 is a side elevational view as viewed from the right in FIG. 6; and,

FIG. 8 is an end elevational view as viewed from the right in FIG. 7.

The broken line showing in FIG. 1 of the end of a horse's braided tail is environmental only and forms no part of the claimed design.
