DESCRIPTION

The design of the present invention is a molded rack having a plurality of raised sections creating slots there between. Two molded racks are used on opposing or adjacent studs in a wooden structure. By aligning the slots horizontally between adjacent studs, one or more shelves may be inserted into the horizontally opposing slots of the molded racks. The holes for mounting are shown in FIG. 1 and when the rack is mounted the stud is vertically behind the rack as shown in FIG. 2.

This application is related to application Ser. No. 11/506,705, filed by applicant on Aug. 19, 2006, now Pat. No. 7,275,648.

FIG. 1 is a front elevational view of a stud rack showing my new design:

FIG. 2 is a bottom plan view thereof;

FIG. 3 is a left side elevational view thereof;

FIG. 4 is a rear elevational view thereof;

FIG. 5 is a top plan view thereof; and,

FIG. 6 is a right side elevational view thereof.
