DESCRIPTION

FIG. 1 is a perspective view of a paper roll provided with adhesive strips adjacent its longitudinal edges in accordance with the present design, with the leading end partially unrolled;

See application file for complete search history.

FIG. 2 is an end view thereof, perpendicular to the axis of the roll, the opposite end being a mirror image; and,

FIG. 3 is a side view thereof, fully rolled.

The roll has the form of a circular cylinder composed of a length of a paper rolled around a hollow cardboard core and when the paper is completely rolled up, the roll will have the same appearance as shown in FIG. 3 when viewed in any direction perpendicular to the axis of the cylinder. The paper roll is provided with two strips of material that are each adjacent to, and extend along, a respective longitudinal edge of the paper roll and that adhere to the paper.
