(57) **CLAIM**

I claim the ornamental design for the multi-positional universal door stop and holder, as shown and described.

DESCRIPTION

The multi-positional universal door stop and holder is a versatile device that can be: (1) positioned on the door hinge, (2) wedge underneath the door, (3) positioned on the width of the door, or (4) wedged into the top corner of an open door; to provide an easy and efficient way to stop and retain a door in an open position. The multi-positional universal door stop can also be attached and removed from the handle of a door for easy storage.

FIG. 1 is a perspective view of the multi-positional universal door stop and holder being attached to the handle of a door.

FIG. 2 is a perspective view of the multi-positional universal door stop and holder being wedged underneath the door.

FIG. 3 is a perspective view of the multi-positional universal door stop and holder being positioned on the width of the door.

FIG. 4 is a perspective view of the multi-positional universal door stop and holder being positioned on the hinge of the door.

FIG. 5 is a side view of the multi-positional universal door stop and holder.

FIG. 6 is the other side view of the multi-positional universal door stop and holder.

FIG. 7 is the front view of the multi-positional universal door stop and holder.

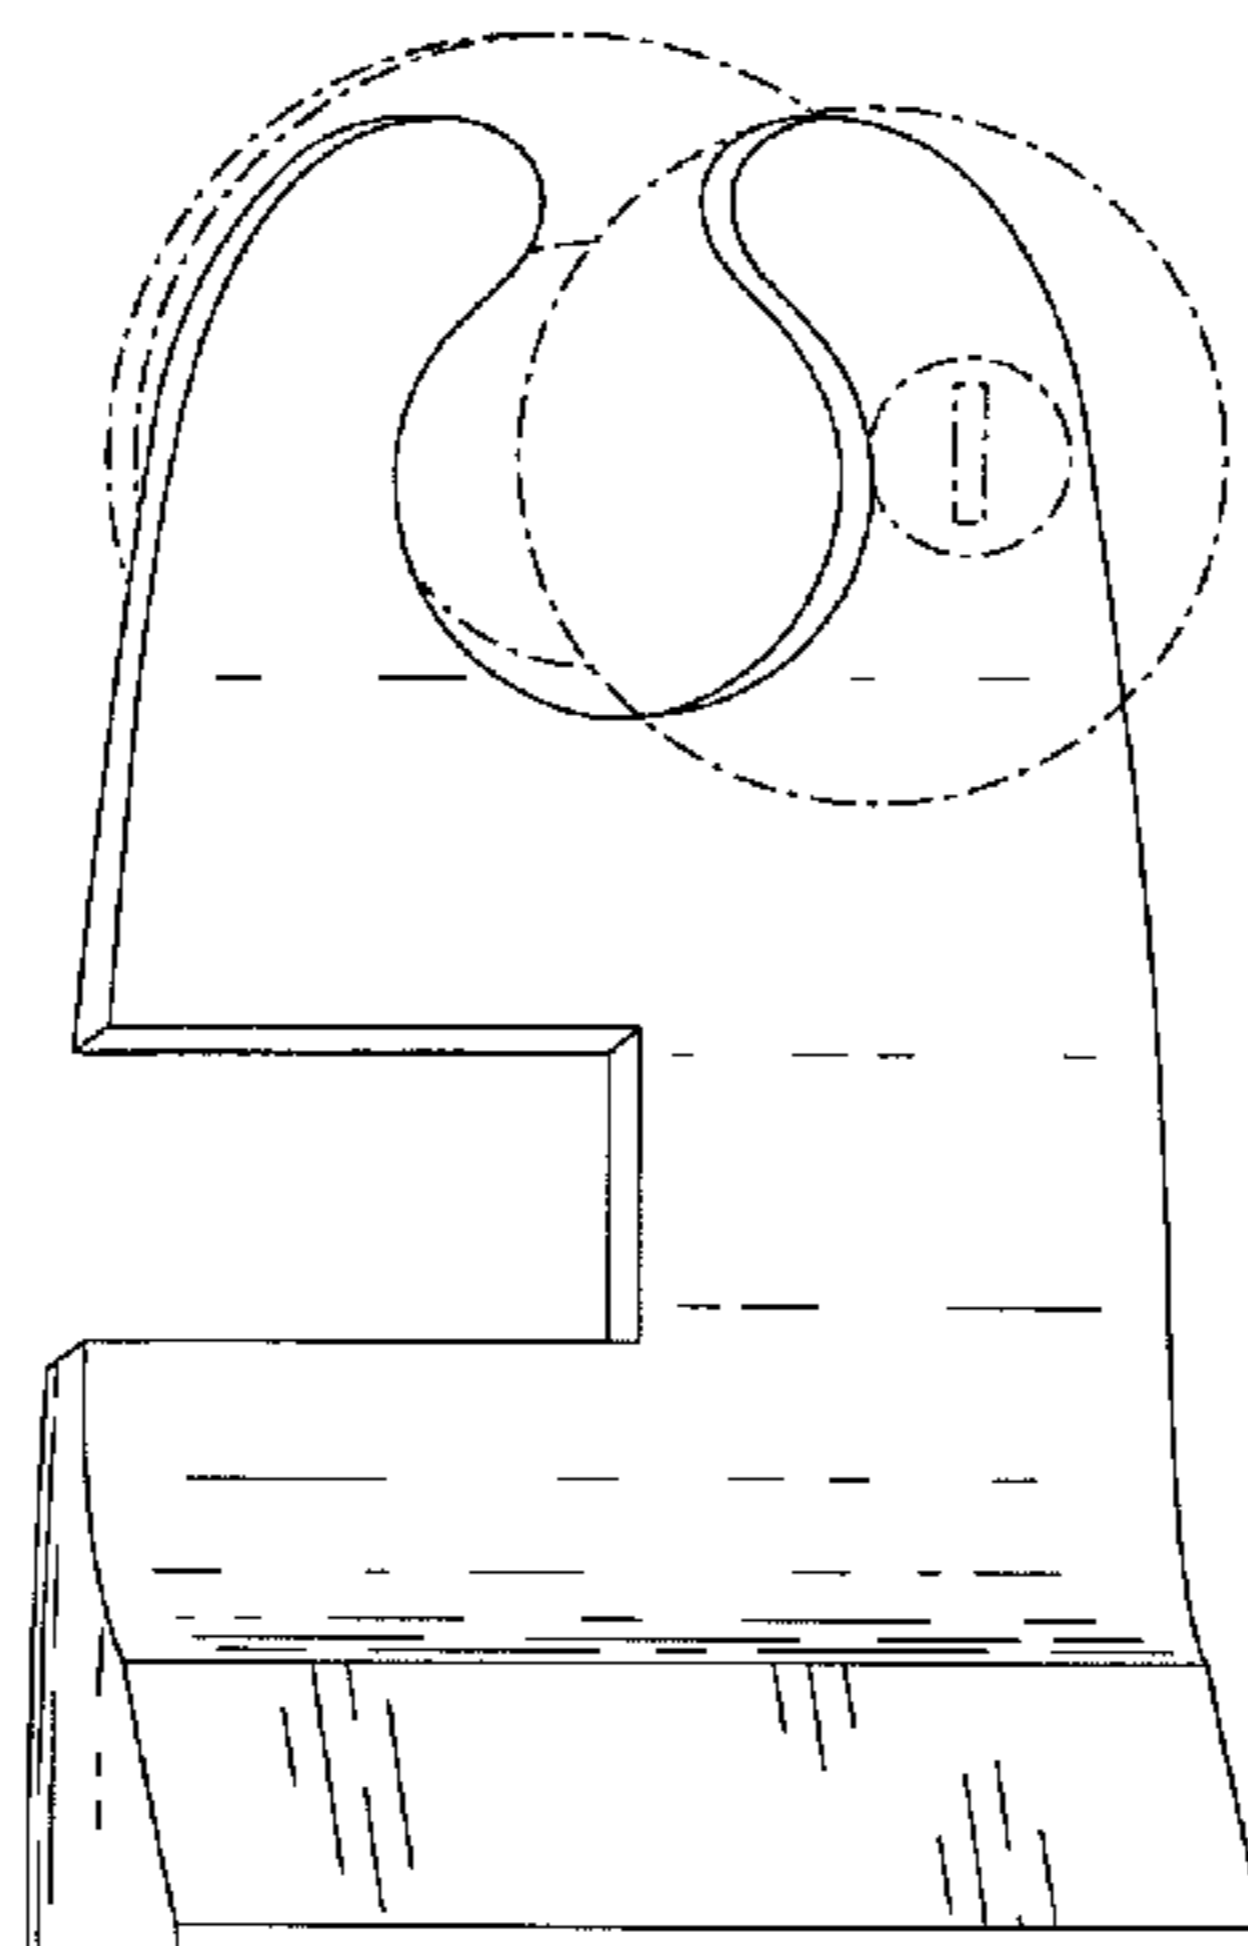

FIG. 8 is the back view of the multi-positional universal door stop and holder.

FIG. 9 is a top view of the multi-positional universal door stop and holder; and,

FIG. 10 is a bottom view of the multi-positional universal door stop and holder.

The broken lines in the drawings displaying a door, a door handle, a door hinge, or a door frame illustrate environmental structure and form no part of the claimed design.
